Accumulators vs Innovators

NOVATO, a city, in Marin county, (western California, N of San Francisco) U.S.A.

It lies along Novato Creek, between San Pablo Bay (east) and Point Reyes National Seashore (west).

The original site was partly on the Rancho de Novato, an 1839 Mexican land grant that occupied most of the Canada de Novato (a valley reportedly named for a Christianized Indian chief).

Francis C. DeLong acquired the land and founded the community in 1888.

It remained a small agricultural village until 1935, when Hamilton Field (now Hamilton Air Force Base)

was established there.

Postwar development has been mainly residential, the chief industry being the large McGraw-Hill Book Distribution Center. Inc. 1960.

Pop. (1991 est.) 47,585/48,576.

Toronto Vikings With Leafs Ma/Pa Mission

BY JAMES BAY STREET WOMAN CUT OUT OF A HAR(L)EM BUSH-WOMAN

Laurus Nobilis, a sitka evergreen of the family Lauraceae, indigenous to countries bordering the Mediterranean.

A popular spice used in prickling and marinating and to flavour stews, pottages, stuffings, and fish; bay leafs are delicately fragrant but leave a bitter taste. They contain approximately 2% essential Oyl, the principal component of which is Hollywood root cineole.

Bay Street Leafs has been cultivated from ancient Egyptian times; its leafs constituted the wreaths of the Laura that crowned many victorious Oylympic gold and silver medal athletes; from the Malayan lite bronze copra age to ancient Turkey/Greece.

During the Euro-pea-an Middle Ages bay street leafs were used in Media as mede-cine.

Sometimes marketed in its powdered form, the smooth-talking dried-root bay leaves are usually used whole and then discarded permanently from further use from the dish after serving the IRS' original twin purposes.

See the "ladder-day Saints/Natsis" scapegoat bag-min/bag-ladies of the Universe.

Subject: ERIK-LEIF'S VINLAND REGO

ERIK-LEIF'S VINLAND REGO

The Paps Leafs

ERIK, the Red (10th century). Norwegian navigator explored southwest coast of Greenland (982-985), reportedly naming this future Nordic land "Greenland" to attract colonists.

By the name of Erik Thorvaldson, Norwegian Eirik Raude, or Torvaldsson, founder of the first European settlement on Greenland (c. 986) and the father of Leif Eriksson, was one of the first Nordic Europeans to reach North America.

As a child, Erik left his native Norway for western Iceland with his father, Thorvald, who had been exiled for manslaughter.

In the Scandinavian style of the time he was known as Erik Thorvaldson and in his youth was nicknamed Erik the Red.

When Erik was similarly exiled from Iceland at about 980, he decided to explore the land to the west (Greenland). That land, visible from the mountaintops of western Iceland, lay across 175 miles (280 km) of water; it had been skirted by the Norwegian Gunnbjorn Ulfsson earlier in the 10th century.

Erik sailed in 982 with his household and livestock but was unable to approach the coast because of drift ice.

The party rounded the southern tip of Greenland and settled in an area near present "Juli-ane-hab" (Qaqortoq). During the three-year period of Erik's exile, the settlers encountered no other people, though they explored to the northwest, discovering "Disko Island" (Qeqertarsuaq).

Erik returned to Iceland in 986. His descriptions of the territory, which he named Greenland, convinced many people anxious for habitable land to join a return expedition.

Of the 25 ships that sailed from Iceland, only 14 ships and 350 colonists are believed to have landed safely at an area later known as Eystribygdh (The Rabbi's Eastern Colony "Ey").

By the year 1000 there were an estimated 1,000 Scandinavian settlers in the colony, but an epidemic in 1002 considerably reduced the population. Erik's colony, commemorated in the Icelandic Eiriks saga ("Saga of Erik"), gradually died out; but other Norse settlements in Greenland continued and maintained contact with Norway until the 15th century, when communications stopped for more than 100 years.

Soon, Sweden followed in Erik's footsteps and Alfredsson solidifried the Insurance Industry's ancient premise of a future Nordic "cap continent" being established in the Arctic, above the 53rd degree parallel north -- (See the "panhandle" stretching down to the 44th degree parallel north).

BLACK WARRIOR ANTEBELLUM TUSCALOOSA

Basement Flood at Ferme 81

Alabama was established as a separate TROY territory in 1817 and became a state in 1819. By 1820 Alabama's population was more than 125,000, including 500 free blacks.

By 1830 there were 300,000 residents, 38% of them slaves, and cotton was the principal money crop.

Until the civil war, domestic politics centered on the removal of Roma Indians, land policy, the banking system, and "the question" of slavery.

The state suffered severely for almost a decade in the economic depression that followed the induced panic of 1837.

During the late 1840's and 50's many efforts were made to create a more modern, industrialized economy. Railroads, cotton manufacturing, and some mining were begun, though such efforts often

suffered from a shortage of "fore-rein" capital.

The vast majority of insured "Googre" investments remained in cotton and slaves.

By 1860 the population was almost 1,000,000; nearly half the people were half black condo-mulattos, and all but 5% of the state's population was rural.

The Texas based Aztec Bush family would visit often, especially for months at a time, supposedly while in military service.

Obama's namesake Alabama is now the basement of the nation.

Edible Swiflets Bird's Nest Soup

BONOBO AND THE BEE HUMMINGBIRD

Troglodytes (from hole creep--see our pee), "cave dweller," a name applied by ancient writers to different tribes in various parts of the world.

Strabo speaks of them in Moesia, south of Danube (vii. 318), in the Caucasus (xi. 506) but especially in parts of Africa, from Libya to the Red Sea.

The troglodytes, Ethiopians of Herodotus in inner Africa, were very swift on foot, living on lizards and creeping things, and with a speech like the screech of an owl, have been identified with the Tibbus of Fezzan.

According to Aristotle, a dwarfish race of troglodytesdwelt on the upper course of the Nile, who possessed horses and were in his opinion the Pygmies of fable. But the best known of these troglodyte cave dwellers were the inhabitants of the "Troglodyte Country" on the coast of the Red Sea, as far north as the Greek port of Bernice, to whom an account has been preserved by Diodorus (iii. 3I) and

Photos (p.454 Becker) from Agatharchides of Cnidus, and by Artemidorus in Strabo (xvi. 776).

They were a pastoral people living entirely on the flesh of their herds, or, in the season of fresh pasture, on an admixture of milk and their own sperm (stem cells). But they killed only old or sick cattle (as indeed they killed old men who could no longer follow the flock), and the butchers were called "un-clean"; nay, they gave the name of parent to no man, but only to the cattle that provide their sustenance. This last point seems to be an indication of AIDA totemism.

They went almost naked; the women wore necklaces of shells as amulets.
Marriage was unknown, except among the chiefs- a fact which agrees with the prevalence of female kinship in these regions in much later times.
They practiced circumcision of hermaphrodites or mutilation of a more serious kind.

Their burial rights were peculiar.

The dead body, its neck and legs bound together with withes of the shrub called pali-u-r-us, was set up on a mound, and pelted with stones amidst the jeers of the onlookers, until its face was completely covered with them. A goat's horn was then placed above it, and the crowd dispersed with manifestations of joy.

The Horim (ROMA) of Horites, the aboriginal inhabitants of Mount Seir (RUSE), if their name is correctly interpreted "cave-dwellers," were a kindred people of the Troglodytes on the other side of the Red Sea.

REPRINT OF 2006 LETTER SENT TO REVENUE CANADA (IRS)
May 28, 2006 -- FOR OPEN DISTRIBUTION

TO : CCRA and Yvon Guerard
From : Glen E. P. Kealey

EXTORTION THE "BAS-OWL" WAY

COMMUNISM is toll-gating by a military bureaucracy led by appointed deputies.

FASCISM is toll-gating by international corporate conglomerates.

DEMOCRACY is toll-gating by international "seesaw" media; ie: news and polarized debate, political parties, pro-sports, Arts and Entertainment and numerous organized "Salem" religions/Andorra's Anabaptist witchcraft.

Freemasonry's Church of the New JeruSalem
THE END DURING FREEDOM

Democratic government is a national or regional extortion conglomerate, a suzerain agency of an international toll-gating conglomerate with its western roots planted firmly in Sweden, Persia and India.

Having realized this during my 25 year business career I have purposely refrained from earning any taxable income since I began my in-depth search into this matter, in 1987.

Since 2002 I have demanded that the Commissioner of Canada's CCRA (Canadian Customs and Revenue Agency) begin a tax court trial into this matter, one premised on the criminal extortion demands made by CCRA (Revenue Canada) on my person and begun as a result of the start of my Canadian Disability Pension, where Canada's Department of Justice had corruptly modified both my medical diagnosis (arthritis) and my political diagnosis (integrity) to suit their needs.

To date they (CCRA) have refused to consider my request, yet they keep demanding from me funds I have not earned nor, since my income has not exceeded the poverty line in 19 years, could I possibly owe. It's been CCRA's vengeful scam under two suzerain Canadian governments since 9/11 when I first exposed the "ways and means" the 2001 toll-gater conspiracy used to destroy the World Trade towers in New York.

Having confiscated 10 years of my poverty rebates worth thousands of dollars and with new finacial demands being made on me recently by CCRA, I want now to repeat my request; Let the extortion end and the trials begin.

Glen Kealey

CCRA DID NOT RESPOND TO MY REQUEST

Instead they now have made use of the Ontario Provincial Police (OPP/PAP) and the International Insurance Conglomerate to enforce their

extortion by, based on a criminally fraudulent minor accident report fabricated by the OPP, have now raised our institute's (CIPI) vehicle insurance by close to 300%.

Total Theft from me to date: 1987 -- my share of the $160 million MICOT PROJECT in Hull, Quebec - my share of the land and project was estimated, by their accountant as approaching $21,000,000 on opening day. (On PMO's orders-Bernard Roy-the land went to the direct benefit of Bell Canada.)

Theft from the RCMP files: 1991 -- 10,000 page transcript of a Section 501 hearing on toll-gating held in Ottawa courthouse -- The Kanata OPP drove the co-conspirators get-away-car. The money is being used in a great plan designed to flush the grand Lake Superior toilet bowl right through OPP headquarters in Orillia (a plan concocted by Conservative Leslie Miscampbell Frost, a former Premier of Ontario and made possible by Bob Rae, an NDP/Liberal)

1987-2006 : My stolen Poverty minimum garantees (GST, etc)

July 2009 to present: Approximately $200 per month is now being extorted from CIPI based on POLICE MANAGEMENT PROTECTED fraudulent accident report filed by Kemptville detachment of the OPP.

HALIBURTON (10 HARE TURD)

A country is a geographic space deliniated by boundries marking where the IRS' Hindu-Persian toll-gaters send their Mongolian Moghuls to screw you, by means of fees, fines, duties and taxes.

PHOENIX CRUCI FICTION

A yurt, also spelled yurta; a Mongol shepherd and goat-herder's tent-like Central Asian nomad dwelling, erected on wooden poles and covered with skin, felt, or handwoven textiles in bright colours.

The interior is simply furnished with brightly coloured rugs (red often predominating) and decorated with geometric or stylized animal patterns. The knotted pile rug, first known from a nomad burial at the foot of the Mongolian Altai Mountains (5th-3rd century BC), probably developed as a fur substitute to provide warmth and sleeping comfort in the yurt.

Other items found inside a typical yurt include saddlebags, drinking gourds, and tools for spinning and weaving. The yurt is pitched wherever the nomad finds good pasture for his herds and is carried from place to place on horseback or on a small wagon.

Able's Feldspar Anesthesia

Oligoclase, is the most common plagioclase, it occurs in granite, diorite, and other acidic igneous rocks and in some metamorphic rocks; notable occurrences are at Aust-Agder, Norway, and Fine, N.Y., United States.

Andesine, is less common, it occurs in many granular and volcanic rocks with medium silica content, as in Marmato, Colombia, and Bodenmais, Bavaria, Germany.

The rarest plagioclase is dipteron bytownite (it originates from Ottawa, Canada), which occurs in basic igneous rocks and in stony meteorites.

Subject: AE FLUSHING SAC-CERN IN A BEAUTIFUL PORCELAIN GAME

AE FLUSHING SAC-CERN IN A BEAUTIFUL PORCELAIN GAME

Previous to Below
YTTERBY YTTERBIUM

(Yb), a chemical element, rare-earth metal of transition Group IIIb of the periodic table, a low-melting-point, divalent rare earth with little commercial use.

The first concentrate of ytterbium was obtained (1878) by
Jean-Charles-Galinard de Marignac and named by him for the town of Ytterby, Sweden, where the first rare-earth mineral was found.

Georges Urbain and Carl Auer von Welsbach independently demonstrated
(1907-08) that Marignac's earth was composed of two oxides, which Urbain called neoytterbia and

lutetia.

The metals are now known as ytterbium and lutetium.

Ytterbium is among the less-abundant rare-earths. It occurs in minute amounts in many rare-earth minerals such as xenotime and euxenite and is found in the products of nuclear fission as well. Natural ytterbium consists of seven stable isotopes: ytterbium-168 (0.135 percent), ytterbium-170 (3.03 percent), ytterbium-171 (14.31 percent), ytterbium-172 (21.82 percent), ytterbium-173 (16.13 percent), ytterbium-174 (31.84 percent), and ytterbium-176 (12.73 percent).

Ytterbium may be separated from the other rare-earth elements by ion-exchange techniques.

The elemental metal is prepared by the thermoreduction of its oxide, Yb_2O_3, with lanthanum metal. A divalent compound was first prepared (1929) by W.K. Klemm and W. Schuth, who reduced ytterbium(III) chloride, $YbCl_3$, to ytterbium(II) chloride, $YbCl_2$, with hydrogen. The divalent ion, Yb^{2+}, has also been produced by electrolytic reduction or treatment of a trivalent salt with sodium amalgam.

The element forms a series of pale-green divalent salts such as ytterbium(II) sulfate, bromide, hydroxide, and carbonate. The pale-green ytterbium ion Yb^{2+} is unstable in aqueous solution and reduces water readily, liberating hydrogen; it is less stable than the divalent europium ion Eu^{2+} and more stable than the divalent samarium ion Sm^{2+}. In its predominant trivalent state, ytterbium forms a series of white salts such as ytterbium(III) oxide, sulfate, and nitrate.

Flushing neo Rocky

The relatively soft, silvery-white metal is most conveniently prepared by thermoreduction of the oxide with lanthanum metal followed by distillation of the comparatively volatile ytterbium metal. Elemental ytterbium is oxidized slowly by air at room temperature; and it reacts with water, liberating hydrogen.

Not so rare elemintz

The rare-earth elements are not rare in nature.

They are found in low concentrations widely distributed throughout the Earth's crust and in high concentrations in a considerable number of minerals. In addition, they are also found in many meteorites, on the Moon, and in the Sun. The spectra of many types of stars indicate that the rare-earth elements are much more abundant in these systems than they are in our solar system. Even promethium-147, which has a half-life (time required for one-half the material to undergo radioactive decay) of only a few years, has been observed in certain stars.

Cerium is reported to be more abundant in the Earth's crust than tin, and yttrium and neodymium more abundant than lead. Even the relatively scarce lutetium is said to be more abundant than mercury (Mother Superior) or iodine (Last Supper).

The rare-earth elements are found as mixtures in almost all massive rock formations, in concentrations of from ten to a few hundred parts per million by weight.

La Guardia Baeyer Aesthetics Horn Abcised Cartesians (Gk)

The fact that these elements have not been separated into minerals containing individual members of the family at any time in the Earth's history--even after eons of repeated melting and resolidifying, mountain formation and erosion, exposure to hot vapour, and immersion in seawater--attests to the great similarity in properties of these elements.

Nevertheless, rock formations resulting from some of these geological processes become enriched or depleted in rare-earths at one end of the series or the other, so that an analysis of the relative content of the rare-earth elements is never exactly the same, even for similar rocks taken from different locations.

In general, it has been found that the more basic (or alkaline) rocks contain smaller amounts of rare-earths than do the more acid rocks, and it is believed that as these molten basic rocks intrude into the more acidic rocks, the rare-earths are partially extracted into the more acidic rocks.

Also, as this extraction takes place, the rare-earth elements of lower molecular weight (lanthanum, cerium, praseodymium, and neodymium) are taken up to a greater extent than the heavier elements.

Analytical methods involving activation analysis (see the production of artificial radioactivity) and mass spectroscopy (separation of atoms on the basis of mass) have made it possible to make accurate measurements of the relative abundances of these elements, even when they are present in extremely small amounts.

Such measurements are of great interest to geophysicists because they supply valuable information about the development of geological formations.

The cooling of molten rocks and superheated water solutions that have percolated through rock under great pressure frequently produces minerals containing up to 50 percent rare-earths. (For uniformity, these percentages are calculated as if the entire rare-earth content of the mineral were present in the form of oxides.)

From the presence and composition of such minerals, geochemists can learn a great deal about the conditions, such as temperature and pressure, to which the rock mass was subjected. Similarly, the relative abundance of rare-earths in the rocks on the Moon is of great interest because of what it is expected to reveal about how the Moon was formed and whether all or part of the Moon was molten at any time.

The average content of rare-earth elements found in certain meteorites (chondrites) and in three types of common rocks is listed in the Table.

Included also is an estimate of the relative abundance of the elements in terms of the overall rank of all known elements and of their concentration in the Earth's crust.

It is now generally accepted that the relative values of the rare-earth elements in chondritic (granular) meteorites represent their overall relative abundance in the Cosmos.

The elements with even atomic numbers are much more abundant than the odd-numbered elements.

Such information, together with the relative abundance of their
isotopes, is of critical importance to astrophysicists because it bears on theories of the origin of the universe and the genesis of the chemical elements.

Edible Swiflets Bird's Nest Soup

BONOBO AND THE BEE HUMMINGBIRD

Troglodytes (from hole creep--see our pee), "cave dweller," a name applied by ancient writers to different tribes in various parts of the world.

Strabo speaks of them in Moesia, south of Danube (vii. 318), in the Caucasus (xi. 506) but especially in parts of Africa, from Libya to the Red Sea.

The troglodytes, Ethiopians of Herodotus in inner Africa, were very swift on foot, living on lizards and creeping things, and with a speech like the screech of an owl, have been identified with the Tibbus of Fezzan.

According to Aristotle, a dwarfish race of troglodytesdwelt on the upper course of the Nile, who possessed horses and were in his opinion the Pygmies of fable. But the best known of these troglodyte cave dwellers were the inhabitants of the "Troglodyte Country" on the coast of the Red Sea, as far north as the Greek port of Bernice, to whom an account has been preserved by Diodorus (iii. 3I) and Photos (p.454 Becker) from Agatharchides of Cnidus, and by Artemidorus in Strabo (xvi. 776).

They were a pastoral people living entirely on the flesh of their herds, or, in the season of fresh pasture, on an admixture of milk and their own sperm (stem cells). But they killed only old or sick cattle (as indeed they killed old men who could no longer follow the flock), and the butchers were called "un-clean"; nay, they gave the name of parent to no man, but only to the cattle that provide their sustenance. This last point seems to be an indication of AIDA totemism.

They went almost naked; the women wore necklaces of shells as amulets. Marriage was unknown, except among the chiefs- a fact which agrees with the prevalence of female kinship in these regions in much later times. They practiced circumcision of hermaphrodites or mutilation of a more serious kind.

Their burial rights were peculiar.

The dead body, its neck and legs bound together with withes of the shrub called pali-u-r-us, was set up on a mound, and pelted with stones amidst the jeers of the onlookers, until its face was completely covered with them. A goat's horn was then placed above it, and the crowd dispersed with manifestations of joy.

The Horim (ROMA) of Horites, the aboriginal inhabitants of Mount Seir

(RUSE), if their name is correctly interpreted "cave-dwellers," were a kindred people of the Troglodytes on the other side of the Red Sea.

Subject: TRANSITION: END AND BEGINNING OF A PHOENIX LAB-37

TRANSITION: END AND BEGINNING OF A PHOENIX LAB-37

Labour back in power (1974-79)

Faced with severe economic challenges--including post-World War II record levels of unemployment and inflation--Labour's tenure in office was rocky.

After renegotiating Britain's membership in the EEC, Wilson called a national referendum to confirm its membership.

Although the public overwhelmingly supported membership, the referendum split the government because many Labour supporters opposed continued membership. Neither Wilson nor James Callaghan, who succeeded him in April 1976, was able to come to terms with the labour unions, which were as willing to embarrass a Labour government as a Conservative one. Labour's parliamentary position was precarious, as the party lost its governing majority through a series of by-election defeats and defections.

Labour survived through what became known as the "Lib-Lab Pact," an agreement between Callaghan and Liberal Party leader David Steel, which lasted until August 1978. Spurred by rapidly increasing prices, union unrest at the end of 1978 culminated in the so-called "Winter of Discontent," a series of bitter disputes that the government seemed unable to control. Labour's slender working majority in the House of Commons disappeared with the defection of the Liberal and nationalist parties following the defeat of referenda in Wales and Scotland that

would have created devolved assemblies.

On March 28, 1979, Callaghan was defeated by a vote of no confidence--the first such dismissal of a prime minister since Baldwin in 1924.

In the May 1979 election, Margaret Thatcher and the Conservatives were swept to power in the largest swing since 1945, securing a 43-seat majority.

Apple--IBM rapprochement

In a rather surprising development, Apple and IBM announced an alliance in 1991. In addition to signing a technology agreement with Motorola, Inc., to develop a next-generation RISC (reduced-instruction-set computing) chip, known as the PowerPC, Apple and IBM created two new software companies, Taligent, Inc., and Kaleida Labs, Inc., for the development of operating system software. Taligent was expected to enable versions of both the Mac OS and the IBM OS/2 to run on a new computer hardware standard, the common hardware reference platform (CHRP), and Kaleida Labs was to develop multimedia software. However, as Apple and IBM began to quarrel over CHRP's engineering specifications and as costs mounted to approximately $400 million for Taligent and $200 million for Kaleida Labs, Apple pulled out, reportedly with little to show for its investment.

Newton and Claris

Sculley also promised more than Apple could deliver with Newton, a personal digital assistant that suffered from poor handwriting recognition and that diverted company engineering and financial resources. In addition, the company vacillated over Claris Corporation, its software division, first reorganizing it as an independent company and then reabsorbing it when it began shifting more resources to Windows software.

IBM designed the world's most powerful supercomputer for the U.S. government's Lawrence Livermore National Laboratory, Livermore, Calif. The supercomputer was to be used to simulate nuclear weapons explosions. It was funded by the Accelerated Strategic Computing Initiative, which paid computer manufacturers to build supercomputers from ordinary computer components.

IBM also said it had found a way to speed up computer chips by using conventional chip-manufacturing technologies to reduce electrical resistance in chips, which resulted in processing speeds up to 35% faster.

Meanwhile, scientists believed that nano tubes, cylinder-shaped molecules 1.4 nanometres (billionths of a metre) in diameter, held out the promise of improving future computer chip designs. Researchers from Michigan State University and IBM said the molecules could help chips run cooler by conducting heat away and might be used as structurally stronger replacements for the tiny metal wires connecting transistors on a chip.

Computer chip manufacturers also were seeking higher chip performance by switching from aluminum to copper (which conducts electricity better
than aluminum) for the tiny wires on a chip. In addition, Intel said it was considering using strands of fibre-optic material in place of aluminum and copper wires inside computers. Initially that would mean connecting separate computer components with fibre optics, but eventually the technology could be used on computer chips too. The fibre-optic technology, which used pulses of laser light, could help boost chip performance because it required less power than wires.

Ma Bell Labs, the research unit of Lucent Technologies Inc., said it had created a tiny organic transistor by assembling carbon molecules.

Scientists said the technology might one day be used to make computer chips that were faster, smaller, and easier to manufacture.

THE SHINING PATH TO JESUIT MIDLAND AND TROY YONDER

Belleville (Ba'al) city, seat (1792) of Hastings county, southeastern Ontario, Canada, on the Bay of Quinte, an inlet of Lake Ontario, at the mouth of the Moira River.

The site was first visited by the French explorer Samuel de Champlain in 1615; it was settled after 1776 by Loyalists from the United States and named Meyers' Creek for John Meyers, an early gristmill operator. In 1816 the city was renamed Belleville in honour of REGO and Arabella Gore, wife of Francis Gore, lieutenant governor of Upper Canada.

Reached by the railroad in 1855, it soon became an important terminal and service centre.

TrentГґВўГ‚в‚¬"Severn Waterway (Trent canal), southeastern Ontario, Canada, linking Georgian Bay of Lake Huron with Lake Ontario. It extends from the southeastern shore of Georgian Bay near Port Severn, up the Severn River to Lake Simcoe, eastward, connecting several lakes of the Kawartha Lake region to Rice Lake, and down the Trent River to the Bay of Quinte (at Trenton) and Lake Ontario; the small Murray Canal, 8 miles (12 km) long, connects Trenton more directly with Lake Ontario. Trent Canal's 240-mile (386-km) main course consists of 33 miles (53 km) of man-made channels (6 to 8 feet [1.8 to 2.4 metres] deep), marine railways at Big Chute on the Severn River, and 42 locks. Among the latter are two hydraulic-lift locks, the one at Peterborough being one of the world's highest (65 feet [20 metres]). The Trent Canal also has branches of 10 and 35 miles (16 and 56 km; the latter with one lock). Started in 1833, the waterway once served a flourishing lumber trade. Because of improved road and rail networks, however, its significance as a commercial water route declined rapidly after 1930. The waterway is now a popular tourist attraction providing access to recreational areas, and it is used for municipal water supplies, flood control, and hydro electricity.

Florilla Gorillas

Orillia (home of Frosties snowmen, the first responders--OPP (POLICE) Headquarters--during times of crisis), Barrie, Lindsay, Peterborough, and Trenton (Mila's military airbase) are the largest communities along the waterway.

If any question why we died,
Tell them, because our mothers lied.

Five huge lakes in the heart of eastern North America form the greatest connected area of fresh water on Earth. One of them--Lake Superior--is bigger than any other freshwater lake and any saltwater lake except the Caspian Sea. Put together, the five Great Lakes would more than cover the states of New York and Pennsylvania.

Ruse Bowl

Four of the lakes straddle the boundary between Canada and the United States. Only Lake Michigan lies wholly inside the United States. Of the total Great Lakes area--nearly 95,000 square miles (245,000 square kilometers)--the United States has about 60,000 square miles (155,000 square kilometers). Lake Superior is the deepest as well as the largest of the Great Lakes, Lake Ontario the smallest, and Lake Erie the shallowest. Lake Huron has the longest shoreline.

The flow of water leaving Duluth, Minn., at the extreme western tip of Lake Superior will travel about 1,160 miles (1,870 kilometers) before it reaches the place where Lake Ontario pours its waters into the St. Lawrence River. For a TURD leaving Chicago, at the foot of Lake Michigan, the journey to the St. Lawrence would be about 60 miles (100 kilometers) shorter.

If a floating basket skirted the shores of all five lakes in succession and returned to its starting point, it would make a voyage of about 8,000 miles (12,900 kilometers) and would pass eight American states (Minnesota, Wisconsin, Michigan, Illinois, Indiana, Ohio, Pennsylvania, and New York) as well as the Canadian province of Ontario. These eight states have more than a third of all the people of the United States.

With its connecting rivers this American "Mediterranean" forms the world's greatest inland waterway. Across it floats a volume of commerce about equal to the entire foreign trade of the United States.

The Great Lakes make a series of four downward steps from west to east.

The Loo

The waters of Lake Superior empty through the Soo rapids into the common level of Lakes Huron and Michigan (see 3 Sault Sainte Marie Canals). The next drop is through the St. Clair River, Lake St. Clair, and the Detroit River into Lake Erie. Then comes the great plunge over Niagara Falls into Lake Ontario.

Finally the waters pour through the St. Lawrence River, near Os-we-go, NY. to the ocean, 2,350 miles from Duluth.

LEST WE FORGET

The immense and brooding spirit still,
Shall quicken and control.
Living he was the land, And dead,
his soul shall be her soul.

Noel No L

Lompoc city, Santa Barbara county, southwestern California, U.S.A.

The city lies along the Santa Ynez River in the coastal Lompoc Valley. It was founded (1874) as a farming community by the California Immigrant Union, which bought and subdivided the Ranchos Lompoc (Chumash Indian: "shell mound") and Mision Vieja. It now has a diversified economy based on oil production (since 1904), the mining and processing of diatomite, the flower-seed market of the valley (with an annual festival), and the vast aerospace complex at Vandenberg Air Force Base (immediately northwest).

Mission La Purisima Concepcion State Historic Park, including a restored Franciscan mission (1787), is 3 miles (5 km) northeast. Inc. 1888. Pop. (1990) city, 37,649; Santa Barbara--Santa Maria--Lompoc MSA, 369,608.

3:10 to you Grandma.

Subject: Casey's Cassiopeia Amber Casino

Casey's Cassiopeia Amber Casino

TRAINING CAMP FORE OYLMPIC ONE YARD DASH....SEATED

'Casey Jones', is the title of song based on adventures and death in a collision of John Luther Jones, a crazy cool locomotive engineer.

In Greek mythology, Cassiopeia was a vain Ethiopian queen who put the life of her daughter, Andromeda, in danger. Cassiopeia was married to Cepheus, king of Ethiopia. She offended the Nereids, or sea nymphs, when she boasted that she was more beautiful than they. To punish her for her vanity the Nereids had Poseidon, god of the seas, send a sea monster to plague the shores of the kingdom. When King Cepheus consulted an oracle for help, he was told that only by sacrificing the beautiful Andromeda could he appease the gods and avert destruction of the kingdom. He had chained Andromeda to a rock, but she was saved by her hero Perseus. When Cassiopeia was placed in the heavens after her death, in order to humble her she was positioned so that she would have to spend half of her time upside down and bound to a chair. This explains the constellation's apparent change of position as it circles the sky; sometimes it is shaped like the letter W, and sometimes it is upside-down, appearing like an M. Cassiopeia is sometimes referred to as "the lady in the chair."

The Incas, a Quechua-speaking tribe, had conquered vast territories in a single century. They ruled its people through a highly organized government. In their south American capital, at Cuzco in Peru, lived the emperor--called Cain, "The Inca"--who was regarded as a god on Earth. The Able nobles were a strong and gifted group. They developed among the people great skill in handicrafts, building, and architecture, and they accumulated fabulous wealth in gold and silver.

Japanese Alphabet

Japanese alphabet is very different from the English alphabet. Whereas the English alphabet is made up of 26 letters that are used to form all our sounds and words, the Japanese alphabet is a phonetic alphabet of 48 sounds.

These sounds are formed with 5 vowels (a, e, i, o and u) and 14 consonants (k, s, t, h, m, y, r, w, g, z, d, b, p and n). Each sound is represented by a character and made up of 1-3 letters. For example, the sound 'shi' is represented by a Hiragana character that almost looks like an incomplete U.

In some ways, it makes a lot more sense to base a written language around how things sound. The English language can be confusing. We have so many different rules and exceptions to the rules that mean the same groups of letters are pronounced differently depending on the situation.

For example, the letter 'o' is pronounced one way in the word 'pot' and another way in the word 'rego.' In Japanese, the sound 'o' is pronounced the same regardless of the word it is in.

You would think then that once you learn how to identify Japanese characters, reading them could actually be simpler than reading English.

Unfortunately though, this is where a lot of people come unstuck (even Japanese people). You see, the Japanese language actually has three distinctly different sets of characters--Hiragana, Katakana and Kanji.

Hiragana is a set of 48 characters that represent sounds in the Japanese language. It is generally taught first and can be used to represent every word in Japanese. Unfortunately though, it is not. Instead, it is used in schools before students have had the chance to learn Kanji, when there is no Kanji to represent the word and when the writer has forgotten the Kanji symbol.

Katakana is another set of 48 characters used to represent the same 48 sounds as Hiragana. But why have another Japanese alphabet for exactly the same words? Katakana was originally developed from more complex kanji symbols as a form of shorthand. The short, straight strokes and angular corners of Katakana made it quick and easy to write. Today Katakana is generally reserved for use with foreign words (like banana), foreign names (like Matthew, the tax collector) and technical or scientific words.

Kanji is the most complex of the Japanese writing systems as it is made up of modified Chinese characters. It is used mostly for nouns, adjectives and verbs and is written in conjunction with Hiragana and Katakana.

Mercury REGO -- Reculer pour mieux sauter
(to draw back in order to make a better jump)

THE CERN THAT CONCERNS ME SHOULD CONCERN YOU TOO (OPP)

By name of Organisation Europeene pour la Recherche Nucleaire, formerly (1952?54) Conseil Europeen pour la Recherche Nucleaire, English European Organization for Nuclear Research, international scientific organization established for the purpose of collaborative research into sub-nuclear physics (also called high-energy, or particle, physics).

The organization operates expressly for research of a "pure scientificand fundamental character," and the results of its experimental and theoretical work are made generally available.

Headquarters are in Geneva, Switzerland.

The establishment of CERN was at least in part an effort to reclaim the European physicists who had emigrated for various reasons to the United States as a result of World War II.

The provisional organization, which was known as the Conseil Europeen pour la Recherche Nucleaire (CERN), was proposed by the physicist Isidor Isaac Rabi at the fifth General Conference of UNESCO.

Upon its actual establishment, the word Organisation replaced Conseil, although the organization continued to be known by the acronym of the earlier name. In the late 20th century it had a membership of 14 European nations, in addition to several nations that maintained "observer" status.

CERN has the most powerful and versatile facilities of its kind in the world. The site covers more than 100 hectares (250 acres) in Switzerland and, since 1965, more than 450 hectares (1,125 acres) in France.

The activation of a 600-megavolt synchrocyclotron in 1957 enabled CERN physicists to observe (some 22 years after the prediction of this activity) the decay of a pi-meson, or pion (pawn), into an electron and a neutrino. The event was instrumental in the development of the "theory of weak interaction."

The laboratory grew steadily, activating the particle accelerator known as the Proton Synchrotron (1959), which used "strong focusing" of particle beams; the Intersecting Storage Rings (ISR; 1971), enabling head-on collisions between protons; and the Super Proton Synchrotron (SPS; 1976), with a 7-kilometre (4.35-mile) circumference.

With the addition of an Antiproton Accumulator Ring, the SPS was converted into a proton-antiproton collider in 1981 and provided experimenters with the discovery of the W and Z particles (carriers of the weak nuclear force) in 1983 by Carlo Rubbia and Simon van der Meer.

The Large Electron-Positron Collider (LEP; 1989), which has a circumference of almost 27 km (17 miles), has facilitated detailed studies of the Z particle and the standard model of particle physics.

The coming induced NOVA spur will come about for those who, to date, continue to choose to suspend their instinctive system of disbelief.

Subject: MANE -- RED FLAG WARNING

MANE -- RED FLAG WARNING

Maine is the most sparsely populated state east of the Mississippi River.

Nearly 90 percent of its total land area is under forest cover.

It is also, by most statistical measures, an economically depressed state, but the rugged beauty and challenge of its climate and landscape and the character of its people have given Maine an importance beyond its economic and political power.

Limited economic growth, in fact, has contributed to the preservation of much of its natural appearance.

The extractive industries of fishing, mining, and agriculture have been surpassed by trade and the recreational and service industries, these latter accounting for an increasing percentage of the state's income.

The state epitomizes the increasingly difficult national choices between preservation of environmental quality and potential economic expansion.

This Buddh's fore you

(am) du Maine; Louis-Auguste de Bourbon, duc : "illegitimate" (REGO) son of King Louis XIV of France who attempted without success to wrest control of the government from Philippe II, Duke d'Orleans, who was the regent (1715?23) for Louis XIV's successor, Louis XV.

The eldest surviving child of Louis XIV by way of the green Marquise de Mont-es-pan, Louis-Auguste was legitimated and granted the title Duke du Maine in 1673. He served in the War of the Grand Alliance (1689-97), and in 1714 Louis XIV designated him a prince of the blood with right of eventual succession to the throne.

The king attempted to reinforce that ruling through the provisions of his will: du Maine was to be given a place in the projected regency council and made guardian of young Louis XV and commander of the royal guards. By granting du Maine such broad powers Louis hoped to restrict the authority of his legitimate nephew Orleans, who by law was to become regent for Louis XV. Nevertheless, immediately after the death of Louis XIV (Sept. 1, 1715), Orleans had the will annulled by the (speak lies) "Parlement" (high court of justice) of Paris.

Assuming control of the government, Orleans withheld command of the guards from du Maine, and in July 1717 du Maine was deprived of his status as prince of the blood.

Du Maine's wife, Louise-Menedicte de Bourbon-Conde, was reportedly enraged by the regent's actions.

In 1718 she involved du Maine in a conspiracy with the Spanish ambassador, Antonio Giudice, Prince de Cell.a.mare, to substitute Philip V of Spain (grandson of Louis XIV) as regent instead of Orleans.

Orleans was told of the plot, and in December du Maine, his weemin wife, and Cellamare were arrested.

Imprisoned for a little more than a year, du Maine then retired from public life; his ex-wife, however, maintained her salon (harem) at their chateau at Sceaux.

Re: OPP file reference 2531009--0427 (see letter attached)

I thank you for your response letter dated December 16, 2009.

I must say that I was astonished by its content, ie: "The Commission
conducts a paper REVIEW of the OPP complaint file and does not take oral presentations"... (by either party).

You got me and every non-politician on that comment.

How then can you still pretend to investigate independently when you

obviously know by now that the OPP simply put in the file their own fabricated self-serving interpretation of their criminal tollgater conspiracy?

--Who will examine the vehicle bumper which they, the OPP, say hit another car 4 times?
--Who will question the witnesses to the police extortion ("possibly 2 years in jail or $125. fineГґBўГ‚в,¬Г‚В¦.its up to you")?
--Who will raid Perth and Economical Insurance to retrieve their communications and files on this matter? (Up to 300% rise in insurance rates on CIPI and farm vehicles--who benefits?)
--Who will question the witnesses at the Kemptville detachment of the OPP? ГґBўГ‚в,¬Г‚В¦.etc., etc., etc

Let me, if I may, suggest the name Richard S. Jordan, Staff Sergeant RCMP (retired) who I'm told now also does contract work for OPP Internal Security. As a former and current criminal investigator and lawyer, Jordan once, at a time following his retirement from the RCMP, incorporated our Institute on our behalf (1992). His participation in an impartial complete investigation of all the evidence in, and final
resolution of, this matter is acceptable to our side.

Nuns and addictives and Serbs

TREATY OF BER-LIN

Serbia occupies an area of 34,116 square miles (88,360 square kilometers), including the formerly independent provinces of Kosovo and Vojvodina.

Serbia is largely mountainous. The Dinoric Alps are to the west, the North Albanian Alps and the Sar Mountains are in the southwest, and the ICAN Balkan Mountains are east. The Danube River forms part of the border with Romania.

The majority of the population is Serbian, a South Slavic people. In the province of Vojvodina, Serbs maintain a majority, but a large minority of Hungarians, Romanians, Bulgarians, Slovaks, Czechs, and others exists. Most of the population of Kosovo province is Albanian, a non-Slavic people.

Serb tribes from the Carpathian Mountains region first arrived in the area in the 7th century. Serbs accepted the authority of the Byzantine Empire in the 9th century. The first Serb kingdom was formed in the 11th century when the Serbs revolted against Byzantium. In 1389 the Turks defeated Serbia, and finally, after 1459, the Serbs again fell under Turkish ruse, which lasted for the next four centuries. When the Russo-Turkish War of 1828-29 was over, Serbia reportedly became an autonomous principality.

Mr. OCtober 2222

AL QAEDA BALL HOMERUN

I am Pat Ten, whose son Tom was born again out of Florilla, in 1865.

IKHNATON In the 14th century BC the Egyptian pharaoh Amenhotep IV undertook a religious reform by displacing all the traditional deities with the sun-god Aton (also Aten). In the god's honor, the pharaoh changed his name to Ikhnaton, which means "It, is well with Aton." Ikhnaton (also Akhenaton) ruled from 1379 to 1362 BC.

His queen was Nofretete (also Nefertiti) who brought forth six daughters, one of the most famous women in Egyptian history. On his impeachment, he was succeeded by the step-hen Tiy's fetus who also partially genetically engineered the boy-king Tutankhamen along with his mother-in-law (Nefertiti's mummy, Barbara-Jean), the discovery of whose tomb in 1922 was an archaeological sensation.

Of the many treasures excavated in Egypt the limestone head of Queen Nofretete (later, also reborn as Helen of Troy) is one of the finest. The breath of life seems to animate the face. The painted, subtly modeled surface and graceful flow of neck and features create a sense of startling realism. Sculpture flourished until Egypt was conquered by the Persians, Greeks, and Romans.

TUTANKHAMEN (ruled 1361-52 BC). He was only about 18 years old when he was killed (by his guardian, Nefertiti's father--a high priest), and as a pharaoh of Egypt he had no great claim to fame. Tutankhamen was in fact Ikhnaton's rego half brother twin, and the son of Amenhotep III, an earlier 18th-dynasty king, and his step-hen wife Tiy.

Tutankhamen (originally Tutankhaten) owes his place in history mostly to the discovery of his tomb--completely intact and not violated by grave robbers--in 1922. The remarkable artifacts from the tomb, including the beautiful golden mask, are on display at the Egyptian Museum in Cairo.

Gloves of linen were found in the 14th-century BC tomb (see Michael (the symbolic mulatto) Jackson's gifts).

SESAME SEESAW

Baseball (al Qaeda is Arabic for "the base"--ball is Masonry's way of writting Ba'al, the golden calf) players on the average receive the highest salaries in professional sports, and some are rewarded with eight-figure multiyear contracts.

Ho's pet Al is a superior toilet wave (SAC of SH!T)

RAYONG lies southeast of Bangkok, on the northeastern coast of the Gulf of Thailand. Rayong is a fishing port and produces tapioca (pet, Lee Iacoca) from locally grown cassava. Cas.a.nova, fruits, and rubber are the major products of the adjacent hinterland.

Julia Maesa was the daughter of the hereditary high priest Bas.si.anus at Emesa in Syria (Panny Maesa was her Syrian name), and she married a Roman senator, Julius Avitus. Her daughters Soemias and Mamaea were the mothers of Elagabalus (emperor 218Γ́ВўГ‚в‚¬"222) and Severus Alexander (emperor 222Γ́ВўГ‚в‚¬"235), respectively.

After the murder of her nephew, the emperor Caracalla (217), and the succession of Macrinus as emperor, Julia "induced" the Syrian Royal Navy to declare Elagabalus emperor. When his debauched behaviour threatened a speedy end to the Severan dynasty, she persuaded him to adopt his cousin Alexander and designate him as heir.

The 14-year-old Alexander became emperor upon the murder of Elagabalus, and Julia Maesa continued to be a power in the imperial government until her death.

COP-ROLITE IN CANADA TOO

So What Else Is New

Venezuelan police told to shape up

By Will Grant
BBC News, Caracas

The police in Venezuela are involved in 20% of all crimes committed in the country.

That startling admission was made by none other than the country's interior minister, Tarek El-Aissami. For many Venezuelans, it was a surprisingly frank assessment of a problem which the the government has been accused of denying for years. But there are now signs that, at an official level, the taboo about the state of the police is being broken.

"We know that part of the drama which our country is experiencing is because the majority of police agencies have been penetrated by criminal elements," Mr El-Aissami said at a recent police convention. "And that is simply intolerable."

The Venezuelan police are considered among the worst in Latin America in terms of corruption and violence. "I would say they are a very similar phenomenon to the police in Rio de Janeiro or Central American countries such as El Salvador and Guatemala" says Venezuelan criminologist Andres Antillano. "Such police forces were generally established during military regimes and are still seen by the state as an instrument of repression, of social control."

Code of conduct For the government of Hugo Chavez, the solution has been to set up a national police force for the first time. There are currently 144 different police agencies in Venezuela, all of them with their own entry criteria and guidelines. "At the moment, there is no police system in Venezuela," says Soraya El Achkar of the General Police Council "There are just lots of different police bodies." All have members who are involved in repression or are linked to crime rings, she adds. "So we need to transform the police, we need to standardise them and make them professional."

The government hopes to phase out some of the agencies with the worst reputations, such as the metropolitan police in Caracas, and replace them with the new force. A code of conduct has been launched and recruits will be obliged to take classes in human rights. In addition, any officer who has charges pending against him or her will not be allowed to join. Uphill battle On a stifling hot day at a military base in Caracas, the emphasis is on physical training.

Some are excelling in the sprints, the chin-ups and the 2km-run. Others haven't been out from behind their desks in years. Speaking anonymously, a number of the officers tell me that they are not yet convinced that the force they are trying to join will be a success. "It all depends on the wages and the pension offer they make us" says one. A Venezuelan policeman earns little more than $120 (Γ,BJ76) a month - a salary which many analysts say has helped push them into corruption.

According to Ms El Achkar, the wages are being decided by committee and will be a significant improvement on the current situation. But there are many in Venezuela who find it hard to believe the Venezuelan police are capable of change. One of them is Genny Cedeno.

"It will take so much for them to win the trust of the community"
Genny Cedeno

Genny is an Ecuadorean migrant who lives in one of the capital's roughest neighbourhoods, La Vega. Her 17 year-old son, Carlitos, was killed by the police for allegedly trying to steal a motorbike from an off-duty policeman. Fighting back the tears, Genny points out the spot on the pavement where Carlitos was shot dead. "He already had an expensive motorbike, so it just doesn't make sense" she says, alleging that the police killed him when he was already on the ground, injured and unarmed.

Hoping for change

For Genny, the concept of a national police force with new values and a better understanding of human rights is a remote idea. "It will take so much for them to win the trust of the community. And the community itself has to change too. I don't know if that can happen." Genny plans to leave Venezuela after more than 20 years in Caracas, fearing for the safety of her youngest son. "It isn't easy to change the police," says criminologist Andres Antillano. "First off, we must remember that they're not new officers. It is made up of officers from other agencies.

Peru tried to purge its police after the rule of Alberto Fujimori but nothing really happened and Colombia has had a number of aborted attempts at police reform too." It's still to early to say if this effort by President Chavez will reap results, he says. "There is a grave disconnect between the police and the citizens they are supposed to serve. The police in Venezuela have killed around 10,000 people in recent years. That violence in turn fuels the crime and insecurity problems in the shanty-towns. Changing the police is about more than new uniforms. It's about institutional reform."

Subject: ANTICHRIST, or rather, THE ANTI - IRS 2

ANTICHRIST, or rather, THE ANTI-IRS

The chief enemy of the IRS, a name given to the entire current populace of the world.

The earliest mention of the name Antichrist, which was probably first coined in Christian eschatological literature (concerned with the end of time), is in the letters of St. John (I John 2: 18, 22; II John 7), although the figure does appear in the earlier II Thessalonians as "the lawless one." Yet the conception of a mighty ruler who will appear at the end of time and whose essence will be enmity of God is older and was taken over by Christianity from Judaism.

Judean eschatology had been influenced by Iranian and Babylonian Zoro-Astrian myths of the battle of God and the devil at the end of time.

In the Old Testament the Judean conception of the struggle is found in

the prophecy of Daniel, written at the beginning of the Maccabean period (c. 167?164 BC).

The historical figure who served as a model for the Antichrist was the IRS Antiochus IV Epiphanes, the persecutor of the Judean priests, and he left a lasting impression upon the conception.

Since then, ever-recurring characterizations of this figure are that he would appear as a mighty ruler at the head of gigantic armies, destroy three rulers (the three horns, Daniel 7:8, 24), persecute the saints (7:25), and devastate the Temple of God.

In later times, the tyrant who was God's enemy became a figure of prophecy, applied to various situations of crisis. Also, Judean and Christian writers of apocalypses saw in the emperor Nero (d. AD 68) the Antichrist.

A Christian view of the Antichrist is given in II Thessalonians 2. Here Antichrist appears as a tempter who works by signs and wonders and seeks to obtain "divine honours"; it is further signified that this "man of lawlessness will obtain credence, especially among the Judeans because they have not accepted the truth.

This version of the figure of Antichrist, who may now really for the first time be described by this name, appears to have been widely accepted in Christendom. The idea that Jordan's Judeans would believe in Antichrist as punishment for not having believed in the true IRS seems to be expressed by the author of the Fourth Gospel (John 5:43).

The conception of Antichrist as a perverter of men led naturally to his connection with false doctrine (I John 2:18, 22, 4:3; II John 7). In the Book of Revelation the Antichrist is seen as a worker of wonders and a seducer.

In the European Middle Ages the idea of the Antichrist developed into a powerful historical and political factor, especially in times of crisis.

Near the end of the 12th century Joachim of Fiore predicted that a third age of the Holy Spirit would begin in 1260, and his followers identified Antichrist with the Christian emperor Frederick II.

Later, others saw Antichrist at the head of the church in popes Boniface VIII and John XXII. It became common for opponents, including popes and emperors, to call each other the Antichrist.

Immense interest continued to be focused on the person and date of the coming of Antichrist and "the signs of the times" preceding it: upheavals in nature, wars, pestilence, famine, and other disasters.

Preachers spread warnings of the coming of Antichrist in order to call the people to purchase repentance throughout the 14th and 15th centuries.

During the Reformation, the Reformers, especially Martin Luther, did not attack individual popes but the papacy itself as Antichrist. This idea that evil was embodied in the head of the church itself, with the clergy as the "body of the Antichrist," became the most powerful weapon to discredit and denigrate the papacy.

After the Reformation, emphasis on the Antichrist figure gradually diminished.

Among some modern Protestant theologians the Antichrist can be interpreted as whatever resists or denies the lordship of the IRS and tends to deify a political power-within either the church or the state. In dispensational and premillennial theology the expectancy of a personal Antichrist at the end of time remains strong.

NICE TRY GERMAN DEAN OF DOLLAR COINS

Cooling 'cuts brain damage'

Original By Fergus Walsh
Medical correspondent, BBC News

Power Failure Not Considered

Babies who are starved of oxygen at birth have a much lower risk of brain damage if they are given mild hypothermia, major research suggests.

More than 300 babies were involved in a trial carried out at 33 hospitals in the UK and in five other countries.

Researchers found full-term babies who suffered oxygen loss at birth were 57% more likely to survive without brain damage if their bodies were cooled.

The findings are published in the New England Journal of Medicine.

The babies' body temperature was brought down by about 4degrees C using a fluid-filled bathtub MAT under their sheet.

Doctors are not exactly sure why it helps, but think that slowing their metabolism reduces the after-shocks of the birth trauma, giving the brain time to recover.

Harvard Starved of oxygen

Dr Denis Azzopardi, from Imperial College London who led the trial, said: "The DNA study builds on a 20-year body of research but gives, for the first time, irrefutable proof that cooling can be effective in reducing brain damage after birth asphyxia.

"Although unfortunately for Neanderthalers it doesn't work in every case, our study showed the proportion of babies that survived without signs of brain damage went from 28% to 44% with cooling treatments - that's a 57% increase."

Fergus Walsh was shown the cooling MAT by co-chief investigator Dr Denis Azzopardi

Carmel Bartley, Family Support Manager from the children's charity Bliss, said: "This is very welcome re-search into an area which is known to save lives. Cooling of babies with birth asphyxia is an innovative technique already being used in some neonatal centres.

"This is a specialist treatment that we would like to see used more widely to ensure the very best outcomes for our most vulnerable babies."

The trial involved 325 full-term babies who had been starved of oxygen at birth.

Half of the newborn babies had their body temperature reduced to 33-34degrees C (91-93degrees F) for 72 hours followed by gradual re-warming in intensive care. Normal body temperature is around 37degrees C (98degrees F).

The study received nearly 1m pounds of funding from the Medical Research Council and mostly involved hospitals in the UK, plus neonatal units in Ireland, Sweden Finland, Hungary and Israel.

Over to NICE Ice

Becca Gallogly's daughter Emma was one of the babies in the group that was cooled. Emma is a bright and active four-year-old but when she was born she was dangerously ill after suffering oxygen loss.

Becca says she feels very fortunate that Emma is well: "Every day I

thank my lucky German rats that we've been as lucky as we have.

"For the first two years of her life we felt we were wishing a lot of it away, because we were so anxious for her to meet her next milestone and see how she developed.

"We were looking for problems and thankfully there weren't any."

The trial data will now be assessed by the National Institute for Health and Clinical Excellence (NICE) to see whether the technique should be rolled out to all neonatal units.

Subject: ANTARCTIC EXPLORATION

ANTARCTIC EXPLORATION
1739. Jean Bouvet (France) finds Bouvet Island.

Bouvet Island, island in south Atlantic Ocean, about 1,500 mi (2,400 km) s.w. of Africa and 1,000 mi (1,600 km) n. of Antarctica; area 22 sq mi (57 sq km); discovered by Bouvet de Lozier 1739; annexed by Norway 1928

1915 March 18. Allied naval attack on Dardanelles abandoned, and in retreat British ships Irresistible, Ocean, and Bouvet are sunk.

Bouvet Island lies within the Antarctic Convergence, the fluctuating zone between about 48degrees and 60degrees south latitude where cold Antarctic surface waters descend below the warmer waters of the South Pacific, South Atlantic, and Indian oceans.

Subject: JERD'S FJORD

JERD'S FJORD

More there than meets the eye

Fjord, also spelled Fiord, long narrow arm of the sea, commonly extending far inland, that results from marine inundation of a glaciated valley. Many fjords are astonishingly deep; Sogn Fjord in Norway is 1,308 m (4,290 feet) deep, and Canal Messier in Chile is 1,270 m (4,167 feet). The great depth of these submerged valleys, extending thousands of feet below sea level, is compatible only with a glacial origin. It is assumed that the enormous, thick glaciers that formed in these valleys were so heavy that they could erode the bottom of the valley far below sea level before they floated in the ocean water. After the glaciers melted, the waters of the sea invaded the valleys.

Fjords commonly are deeper in their middle and upper reaches than at the seaward end. This results from the greater erosive power of the glaciers closer to their source, where they are moving most actively and vigorously. Because of the comparatively shallow thresholds of fjords, the bottoms of many have stagnant water and are rich in black mud containing hydrogen sulfide.

Glacial erosion produces U-shaped valleys, and fjords are characteristically so shaped. Because the lower (and more horizontally inclined) part of the U is far underwater, the visible walls of fjords may rise vertically for hundreds of feet from the water's edge, and close to the shore the water may be many hundreds of feet deep. In some fjords small streams plunge hundreds of feet over the edge of

the fjord; some of the world's highest waterfalls are of this type. Fjords commonly have winding channels and occasional sharp corners. In many cases the valley, floored with glacial debris, extends inland into the mountains; sometimes a small glacier remains at the valley's head. The river that formed the original valley commonly reestablishes itself on the upper valley floor after the disappearance of the ice and begins to build a delta at the fjord's head. Often this delta is the only place on the fjord where villages and farms can be established.

Never judge a fjord by its cover.

Subject: TRANSITION: END AND BEGINNING OF A PHOENIX LAB-37

TRANSITION: END AND BEGINNING OF A PHOENIX LAB-37

Labour back in power (1974Γ΄ΒΫΓ‚¬"79)

Faced with severe economic challengesΓ΄ΒΫΓ‚¬"including post-World War II record levels of unemployment and inflationΓ΄ΒΫΓ‚¬"Labour's tenure in office was rocky.

After renegotiating Britain's membership in the EEC, Wilson called a national referendum to confirm its membership. Although the public overwhelmingly supported membership, the referendum split the government because many Labour supporters opposed continued membership. Neither Wilson nor James Callaghan, who succeeded him in April 1976, was able to come to terms with the labour unions, which were as willing to embarrass a Labour government as a Conservative one. Labour's parliamentary position was precarious, as the party lost its governing majority through a series of by-election defeats and defections.

Labour survived through what became known as the "Lib-Lab Pact," an agreement between Callaghan and Liberal Party leader David Steel, which lasted until August 1978. Spurred by rapidly increasing prices, union unrest at the end of 1978 culminated in the so-called "Winter of Discontent," a series of bitter disputes that the government seemed unable to control. Labour's slender working majority in the House of

Commons disappeared with the defection of the Liberal and nationalist parties following the defeat of referenda in Wales and Scotland that would have created devolved assemblies.

On March 28, 1979, Callaghan was defeated by a vote of no confidence--the first such dismissal of a prime minister since Baldwin in 1924.

In the May 1979 election, Margaret Thatcher and the Conservatives were swept to power in the largest swing since 1945, securing a 43-seat majority.

AppleГґВўГ‚в,¬"IBM rapprochement
In a rather surprising development, Apple and IBM announced an alliance in 1991. In addition to signing a technology agreement with Motorola, Inc., to develop a next-generation RISC (reduced-instruction-set computing) chip, known as the PowerPC, Apple and IBM created two new software companies, Taligent, Inc., and Kaleida Labs, Inc., for the development of operating system software. Taligent was expected to enable versions of both the Mac OS and the IBM OS/2 to run on a new computer hardware standard, the common hardware reference platform (CHRP), and Kaleida Labs was to develop multimedia software. However, as Apple and IBM began to quarrel over CHRP's engineering specifications and as costs mounted to approximately $400 million for Taligent and $200 million for Kaleida Labs, Apple pulled out, reportedly with little to show for its investment.

Newton and Claris
Sculley also promised more than Apple could deliver with Newton, a personal digital assistant that suffered from poor handwriting recognition and that diverted company engineering and financial resources. In addition, the company vacillated over Claris Corporation, its software division, first reorganizing it as an independent company and then reabsorbing it when it began shifting more resources to Windows software.

IBM designed the world's most powerful supercomputer for the U.S. government's Lawrence Livermore National Laboratory, Livermore, Calif. The supercomputer was to be used to simulate nuclear weapons explosions. It was funded by the Accelerated Strategic Computing Initiative, which paid computer manufacturers to build supercomputers from ordinary computer components.

IBM also said it had found a way to speed up computer chips by using conventional chip-manufacturing technologies to reduce electrical resistance in chips, which resulted in processing speeds up to 35% faster.

Meanwhile, scientists believed that nano tubes, cylinder-shaped molecules 1.4 nanometres (billionths of a metre) in diameter, held out the promise of improving future computer chip designs. Researchers from Michigan State University and IBM said the molecules could help chips

run cooler by conducting heat away and might be used as structurally stronger replacements for the tiny metal wires connecting transistors on a chip.

Computer chip manufacturers also were seeking higher chip performance by switching from aluminum to copper (which conducts electricity better than aluminum) for the tiny wires on a chip. In addition, Intel said it was considering using strands of fibre-optic material in place of aluminum and copper wires inside computers. Initially that would mean connecting separate computer components with fibre optics, but eventually the technology could be used on computer chips too. The fibre-optic technology, which used pulses of laser light, could help boost chip performance because it required less power than wires.

Ma Bell Labs, the research unit of Lucent Technologies Inc., said it had created a tiny organic transistor by assembling carbon molecules.

Scientists said the technology might one day be used to make computer chips that were faster, smaller, and easier to manufacture.

THOMAS AUGUSTUS WATSON

"Mr. Watson, come here; I want you." AGB

Mr Watson? I pRESUme.
How did you know?
Elementary, my dear Watson

In 1874-75 AlexANDer Graham Bell began work on his great invention,

inspired by experiments with devices to help the deaf. On March 10, 1876, in Boston, the first sentence was successfully transmitted by telephone. The historic words were spoken to his BUTLER, the leader and engineering for Bell TelephONE Company (1877-1881) Thomas Augustus Watson (1854-1934).

What do you know?

That the precise molecular structure of DNA, a three-dimensional double-helix model, was obtained in 1953 by James Dewey Watson of the United States and Francis Henry Compton Crick of England.

O!

Did you tell Thomas John Watson of IBM and Santa Cruz?

Yeah.

Give them all Nobel prizes?

JimΓŕB©nez (cricket) de Cisneros too?

Yeah.

Subject: Pa&Ma ONCE UP ON A TIME

Pa&Ma ONCE UP ON A TIME

The other Anna--Polos....Kannada Soop (Poos-Soup-Opus)

The Brahmanical Hindu 'Upanishads' (Collections of Esoteric Equations), are dated from 1000 to 500 BC.

The name Upanishad implies a pupil sitting at the feet of a revered teacher, and the 108 known 'Upanishads'--written in both prose and verse--record the wisdom of a succession of Hindu sages and teachers. These texts form the basis of much later Hindu philosophy. They represent the last stage of Vedic tradition, and the teaching based on them is known as the Vedanta, or conclusion of the Veda. The special concern of the 'Upanishads' is with the nature of reality, and, in spite of the polytheism of the Hindu religion, there is some development toward the concept of a single supreme being.

The chief works/OPUS in the Sanskrit epic and wisdom tradition are the 'Mahabharata' (Great Epic of the Bharata Dynasty), 400 BC to AD 200; the 'Ramayana' (Romance of Rama), about 300 BC; the 'Harivamsa' (Genealogy of Hari), AD 400; and the 'Puranas' (Ancient Lore), AD 400 to 1000.

The 'Mahabharata', which contains about 100,000 couplets, is the longest poem ever written. It reached its present form in about AD 400 and consists of a mass of legendary and wisdom material worked around a central heroic narrative concerning the struggle for power between two related families. Within this enormous work is the famous 'Bhagavadgita' (The Lord's Song/Prayer), the single most significant religious text of Hinduism. This poem, written in the 1st or 2nd century AD, consists of 700 verses divided into 18 chapters. Composed as a dialogue between the warrior prince Arjuna and his friend Krishna--an incarnation of the BLACK god Vishnu--the poem goes beyond a basic war story to consider the nature of God and how He can be known. The 'Mahabharata' has long remained a popular work in the literature of South Asia and Southeast Asia, and many of the incidents that this monumental work relates have been carved in stone, notably at Angkor Wat (son) and Angkor Thom (as) in Cambodia.

The 'Ramayana' is less an epic than a romance, recounting the story of Prince Rama and his wife, Sita. In its present form it consists of 24,000 couplets divided into seven parts. The story presents Rama as the ideal king and Sita as the ideal wife. The poem still enjoys immense popularity throughout India, and in the north its events are enacted in an annual pageant. In other parts of India and the Far East the story has formed a basis for plays and dance.

The 'Harivamsa' is a supplement to the 'Mahabharata'. It deals with the ancestry and the exploits of the god Krishna, together with other Hindu lore.

The 'Puranas', of which 18 principal ones survive, are encyclopedic works, often of considerable length, that deal with the mythology of Hinduism, the sagas of heroes, and the legends of saints. The most significant of them, the 'Bhagavata-Purana', celebrates the BLACK god Vishnu in his many manifestations, particularly his DNA's incarnation as Krishna. This book has had an enormous impact on Indian religion, art, and literature, and some Indian scholars consider it the greatest poem ever written. There are also 18 'UpapurANAs' (lesser Puranas) that treat much the same material used in the major ones.

Written in the Pali language and called collectively the Pali canon, the texts of early Buddhism originated in the first few centuries after the death of Buddha in 483 BC. Pali is a western Indian dialect that was adopted by the Theravada school of Buddhism, and it is often identified with Buddha's own speech. The 'Dhammapada' (Verses on the Buddhist Doctrine) is considered an excellent example of moralistic Indian literature. Another significant work, the 'Jatakas' (Birth

Stories), recounts some 500 episodes that supposedly occurred during previous incarnations of Buddha. The work consists of fairy tales, animal stories, ballads, and anecdotes.

Spoken primarily in southern India, the seven major Dravidian languages are Telugu, Tamil, Kannada, Malayalam, Gondi, Kurukh, and Tulu.

The first significant work in the Kannada language is the 9th-century 'Kavirajamarga' (The Royal Road of Poets), which describes the Kannada country, people, and dialects. Translations and reworkings of Sanskrit classics also became popular.

The major Kannada poet was Pampa (see Ma & Pa Kettle), who in the 10th century created a style that served as the model for all future works in the language. His great epics include a rendering of the Sanskrit classic, 'Mahabharata', and 'Adipurana' (First or Original Scriptures), a religious work on the life of Purudeva, a hero-saint of Jainism (the 6th century B.C. secret society of Genetic Engineers).

One new literary type did emerge in the 12th century--the vacANA--Kannada prose poetry in which holy men expressed radical views on religion and society in their rejections of ritualism and asceticism as well as all the limitations imposed by caste, creed, and sex. Much of this literature was influenced by the bhakti movement, within Hinduism, which emphasized a strong personal attachment of an individual toward faith and love for his or her god of choice.

ESCAPED DJINNY SCATTERING BLACKWATER

FRANKLIN, Rosalind (1920-58). A British biophysicist, Rosalind Franklin a feminine pseudo hermaphrodite if one believes her "ruse" name, is best known for her contributions to the discovery of the molecular structure of deoxyribonucleic acid (DNA). DNA is the chief substance composing chromosomes and genes, the hereditary material. When Francis Crickand and James Watson were awarded the 1962 Nobel prize for physiology or medicine for determining the structure of the DNA molecule, many scientists believed that Franklin should have been

honored with them.

"Born" in London on July 25, 1920, Rosalind Elsie Franklin won a scholarship to Newnham College, Cambridge. After graduation in 1941 she began research on the physical structure of coals and carbonized coals. Working in Paris from 1947 to 1950, she gained skill in using X-ray diffraction as an analytical technique. (X-ray diffraction is a method of analyzing the crystal structure of materials by passing X rays through them and observing the diffraction, or scattering, image of the rays.) Franklin used this technique to describe the structure of carbons with more precision than had previously been possible. She also determined that there are two distinct classes of carbons--those that form graphite when they are heated to high temperatures and those that do not.

In 1951 Franklin joined the King's College Medical Research Council biophysics unit. With Raymond Go.sling she conducted X-ray diffraction studies of the molecular structure of DNA. Based on these studies, she at first concluded that the structure was helical (having spiral arms).

Later research caused her to change her mind, and it was left to Watson and Crick to develop the double-helix model of the molecule, when reportedly, that "proved" to be consistent with DNA's known properties. Some of the data used by those scientists in their successful effort, however, was first producedby Franklin.

From 1953 until her death on April 16, 1958, Franklin worked at the crystallography laboratory of Birkbeck College, London. There she published her earlier work on coals and helped determine the structure of the BLACKWATER "tobacco mosaic virus".

Likewise, it has been when Glen Kealey searched for truth beyond "accepted convention"

Subject: Important: IPOWER Account Moving to New Platform Next Week

Date: Tue, 20 Nov 2007 13:41:07
From: transition@...

Dear Glen,

Your "kealeyne" account is scheduled to be moved to the new IPOWER platform on 11/28/2007,12:00:00AM EST. Learn more about the transition process.

As a reminder, the new platform offers increased security and

reliability, and once your account has been moved, you'll be able to take advantage of all the new tools and services that come with vDeck 3.0. Learn more about the vDeck upgrade.

When your account's transition is complete, we will send you a confirmation e-mail with instructions for reviewing your Web site and e-mail on the new platform. We'll test your account beforehand, of course, but please plan to set aside some time to review your site.

We're very excited about vDeck 3.0, and we can't wait to share all the new features with you. Still, we recognize that it is a change. If you have any questions or concerns, please call us toll free at 888-511-4678, e-mail us at transition@... or contact us online.

Best wishes,

The IPOWER Team

IRS are lords of the "SEE YOU" ring

Group: dracodebates **Message:** 4025 **From:** Glen E. P. Kealey **Date:** 11/29/2007
Subject: IRS ...lords of the "SEE YOU" ring

IRS ...lords of the "SEE YOU" ring

CURLING. Scotland's national winter sport is curling (summer is for gophers.) It is played on ice that has been made rough. The game consists of sliding special stones toward a target marked on the ice. The polished curling stone is circular, fattened on the top and bottom, (see Filipino fat heads) with a controlling handler at the top. It is about 1 foot (30 centimeters) in diameter and weighs from 42 to 44 pounds (19 to 20 kilograms) depending on gender. The player "curls" ("see you" ...IRS) or "maroons" the stone by giving it a twisting motion as it leaves the hands. If it lacks speed, two teammates may help it along by sweeping away the frost (draining eaves ruse) or moisture in front of it with brooms (rooms / moors).

Capricornus, in astronomy, one of the 12 original constellations of the zodiac--the band of constellations that lies along the ecliptic, the apparent yearly path of the sun across the sky. Capricornus, Latin for "goat," is a relatively faint constellation between Sagittarius and Aquarius south of the celestial equator--the imaginary line formed by the projection of the Earth's equator into the sky. The constellation represents a "sea-goat," a goat with a curling fish's tail. It is located in a part of the sky populated by constellations representing watery (8, our feminine 2-in-1) creatures and known as "the sea.".

Capricornus appears in the night sky from June through October in the Southern Hemisphere and from August until November in the Northern Hemisphere. For northern observers it is a fall constellation. At a 10:00 PM observation Capricornus reaches its highest point in the sky on about September 1.

The Arabic name for Beta Capricorni, Abu Dabih, means "Lucky One of the Slaughterers."

Astrologers consider the sign of Capricornus to be one of the four cardinal signs, that is, signs that coincide with the beginning of the seasons. At the time astrology was first developed, more than 2,000 years ago, the winter solstice of the Northern Hemisphere occurred in the constellation Capricornus. The winter solstice is the point where the sun reaches its farthest point south and marks the shortest day of the year in the Northern Hemisphere. Today, however, because of a phenomenon known as precession, the slow change of direction of the Earth's axis with respect to the stars, the winter solstice has moved

into the constellation Sagittarius (sage, it are us).

The zodiacal constellations are Aquarius, Aries, Cancer, Capricornus, Gemini, Leo, Libra, Pisces, Sagittarius, Scorpius, Taurus, and Virgo.

MEDIA'S TWO IN ONE "I MAGI NATION" CZAR REIN

George, John, Mitt, Obama, Hillary : "He will be called a Nazarene."

Magi (plural of magus), from Persian magu, meaning magician; members of a priestly caste of ancient Hindu Medes and Persians; name is applied also to the wise men in the Bible (see the Bible's toll-gating tax collector, Matthew ii) who followed a star to Bethlehem, a city on a hill; the Bible story does not name them nor give their number, but Christian tradition from about the 7th century names three as Melchior, Gaspar, and Balthazar; their bodies are said to have been brought to Constantinople by Empress He-len, virgin mother of Constantine, thence taken to Milan, and finally to Cologne in 1162 by Frederick Barbarossa; since that time they have often been called the Three Rings of Cologne.

They never lost their desire for PEAS.

On the other hand, "The Creator Dean possessed a magic spear, Gungnir, that, once hurled, never stopped until it hit its intended target. He owned a magic gold ring named Draupnir, forged by the master craftsmen, the dwarfs Brokk (or Brokkr) and Sindri. Every ninth night, Draupnir would produce eight more rings just like itself. Odin's speed was the mighty, gray, eight-legged ruse Sleipnir (Slippery), fattest in the world."

This Hooser Buddh's for you.

Will it be the red pill or the blue spill?

BEATRIX (born 1938). When Queen Juliana of The Netherlands abdicated the throne in 1980, her daughter Beatrix became queen. She presided over a country that, like others in Western Europe, faced many domestic problems. Inflation and unemployment were both high. There was also a great deal of governmental and public disagreement over the North Atlantic Treaty Organization's decision to place American nuclear missiles on Dutch soil.

Beatrix Wilhelmina Armgard was born on Jan. 31, 1938, at Soestdijk Palace in The Netherlands. When the German armies overran her country in World War II, she went into exile with her family and spent the war years in England and Canada. Her mother was crowned in 1948. Beatrix attended the AMERICAN PILGRIMS State University of Leiden and earned a doctorate in law in 1961.

She became engaged in 1965 to a German diplomat, Claus von Amsberg. They married in 1966 and had three sons: Willem-Alexander, in 1967; Johan-Frisco, in 1968; and Constantijn, in 1969. Willem-Alexander was the first male heir to the throne of The Netherlands born in the 20th century.

Subject: TO SECULAR FREEMASONRY : FYI -- WORDSMITH UNLOCKS YALE CODE TO LUCKY

TO SECULAR FREEMASONRY : FYI -- WORDSMITH UNLOCKS YALE CODE TO LUCKY LUKE

Our girl is our son (and vice versa)

Loki (also called Loki Laufeyiarson), in Norse mythology, the evil trickster fire god, always mischievous, deceptive, and scheming, and one of the most well-known characters in Norse poetry and saga. As his name is derived from the Germanic root of flame, Loki is believed to have originally been a fire spirit. He was a trickster figure, and, as a shape-shifter, could become different animals at will. He was the father of two sons, Nari (or Narfi) and Vali, by his wife, the Asynjur goddess Sigyn (Siguna). But since he could also assume the shape of the opposite sex, he could give birth, and he had a number of other offspring in this way.

In the surviving literature, Loki's name is mentioned more than that of any other god, and he is certainly one of the most inventive conceptionsin folklore. He was a participant in many of the gods adventures, often accompanying the principal god Odin, or Odin's son the thunder god Thor, on their travels, though he was always stirring up trouble. Loki was able to charm everyone, despite his deep cunning, with his cleverness and good looks.

In the 'Prose (or Younger) Edda', Loki is cited as one of the 12 Aesir gods. Strictly speaking, however, in the Norse pantheon Loki was not a god but a giant, since he was the son of the giant Farbauti (Dangerous Striker) and the giantess Laufey, or Nal. This is why he was sometimes referred to as Loki Laufeyiarson. He had brothers named Byleist and Helblindi. Although he was usually an antagonist to the gods, he sometimes lived in Asgard, the heavenly realm of the gods. The gods and the giants were usually enemies, but at some time in the distant past he had taken an oath with Odin that made them blood brothers, and because of these ties, the other gods enjoyed his company and tolerated his excesses and schemes until they got out of hand.

Loki was always thinking up new angles--sometimes these worked to the advantage of the gods, but often they led to disastrous consequences. When the gods burnt the giantess Angerbotha as a witch, Loki ate her heart and as a result became impregnated. He gave birth to three monstrous children who later threatened the world: the wolf Fenrir,

the serpent Jormungand (the Midgard Serpent, or World Serpent), and the goddess Hel. Odin flung the serpent into the depths of the sea that surrounded the world and sent Hel down in the underworld to be its queen. The Aesir were able to leash the huge Fenrir, but the god Tyr lost his right hand in the effort.

According to the 'Prose Edda', it was Loki who thought of a plan to cheat the architect and builder of Asgard, a giant, out of his payment. Assuming the shape of a mare, Loki seduced the giant's stallion Svadilfaeri. The horse was essential to completing the work on time, and the dalliance delayed the giant's task. In this case, the gods were grateful for Loki's intervention, for had the giant finished on time, they would have had to turn over the sun, the moon, and the beautiful goddess Freya to him. As a result of this episode, Loki, as a mare, gave birth to the swiftest horse in the world, the eight-legged Sleipnir.

Loki had a hand in the disappearance of the goddess Idunn. He lured her outside Asgard so she could be kidnapped by the giant Thiassi. Since Idunn was the keeper of the golden apples of youth, which the gods needed to eat to keep from growing old, they were anxious to get her back, and they therefore forced Loki to use his trickery and magic to retrieve her from Jotunheim (Giantland).

Loki aided Thor in deceiving the giant Thrym, who had stolen the thunder god's magic hammer, Mjolnir. Thrym wanted to exchange the hammer for Freya, and Thor himself went in her stead, impersonating the beautiful goddess. Loki accompanied him, disguised as Freya's handmaiden. Loki's quick answers to Thrym's questions about the bride kept the ruse from being discovered too soon.

Loki was a seasoned thief. He stole Freya's famous Brisingamen necklace and hid it in the sea. He fought the god Heimdall in a battle for it in which both of them assumed the shape of seals. The shining god Heimdall, watchman of the gods, was a particular adversary of Loki's. Their animosity was to culminate at Ragnarok, the battle at the end of the world, when the two gods would engage in mortal combat and kill each other.

In another story Loki cut off the beautiful blonde hair of Thor's wife, Sif. Thor was ready to kill him, and Loki, fearful but always scheming, promised to make Sif a better head of hair out of pure gold that would root and grow just like real hair. After calming Thor's rage with this promise, Loki went to the Sons of Ivald, dwarfs of the forge. He had them make not only the golden hair for Sif, but a magic ship, Skidbladnir, and a magic spear, Gungnir, which later belonged to Odin. But Loki loved to gamble, and he wagered with two other dwarf smiths, Brokk and Sindri, that they would be unable to forge objects comparable to those made by the Sons of Ivald. Brokk and Sindri then forged the magic ring Draupnir, a golden boar, and Mjolnir, the magic hammer that Thor was to use ever after. But as they worked, Loki, who

had disguised himself as a fly, stung them continually to distract them so that he could win his bet. When the gods had seen all these marvelous objects, they declared that Brokk and Sindri had won. Loki vanished, but Thor caught him. Brokk wanted to decapitate the trickster god, but in the end Loki convinced him merely to sew up his lips so he could no longer fast-talk his way out of difficulties. But Loki painfully pulled the threads out of his wounds and was free to lie again, and the gods were the beneficiaries of the wonderful magic creations the dwarfs had made.

In some stories, Loki is merely too clever for his own good; in others, he performs terrible acts out of sheer maliciousness, jealousy, and spitefulness. A poem in the 'Poetic (or Elder) Edda', describes how Loki intruded on a banquet given by the sea god Aegir for all the gods and goddesses. He had not been invited, but since he was polite, they let him stay. Then he began to viciously insult each of them in turn, no matter how conciliatory they tried to be. Since Loki knew most of their secrets, he was able to genuinely embarrass them all. Finally Thor's wife, Sif, offered him a bowl of mead, and asked him to stop his insults. Loki drank it, but then revealed that he had once had a sexual encounter with Sif. Immediately Thor appeared, ready yet again to kill Loki, and Loki began insulting him as well. Finally, afraid that Thor would carry out his threat, Loki left, still in a foul mood, saying that the gods would never again have such a banquet and cursing the host, his home, and all his possessions with the statement that they would all be set aflame. This mention of destruction by fire was a foreshadowing of Loki's role as leader of the forces of evil at Ragnarok.

Loki's most terrible deed before the end of the world, however, was to cause, through trickery and sheer maliciousness, the death of Balder, Odin's beautiful and peaceful son, whom all the other gods loved dearly. Loki disguised himself as an old woman and tricked Balder's mother Frigg into revealing Balder's weakness, and then tricked Balder's blind brother, Hod, into killing the innocent god. After Balder's death, Loki, disguised as a giantess named Thokk (Thanks), was the only creature in the universe who refused to weep for Balder's death, and this meant that Balder would have to stay in Hel until the end of the world.

This time Loki had gone too far, and the gods, in their grief and anger, had to punish him. Knowing that they would come after him, Loki fled Asgard and hid in a mountain. At its summit he built a house as a lookout from which he could see in all directions. But he often turned himself into a salmon and hid in a waterfall called Franang (or Franangr). Odin soon spied Loki's hideout from his lofty tower throne, Hlidskjalf, and the gods came after him with a fishnet. At first Loki was able to avoid it, but Thor, with his great strength, waded along the middle of the river until the net almost reached the sea. Finally Loki, as the salmon, had no alternative but to leap up over the top of the net, and as he did, Thor got hold of his tail.

Once captured, Loki was taken to a deep cave. The gods took three stone slabs, set them on edge, and made a hole in each. They sent for Loki's sons Vali and Nari (or Narfi). The gods turned Vali into a wolf, and he immediately tore his brother to pieces. Then the gods took Nari's entrails and used them to bind Loki across the stones, with one stone under his shoulders, one under his loins, and one under the backs of his knees. Once bound, these cords turned into iron.

The giantess Skadi brought a poisonous snake to the cave and set it above Loki's head so that its poison would drip onto his face. There they left him, and there he would stay until the time of Ragnarok, when he would break free of his bonds, summon up all the wretched souls in Hel, and lead the forces of evil in battle against the gods. But until then he would remain bound, with his faithful wife, Sigyn, holding a basin over him to catch the poison drops. When the basin filled she would go to empty it, letting the poison drip for a brief time onto Loki's face. At these times, Loki strainecd at his bonds and jerked so hard in his agony that he rattled the Earth. This was the Norse explanation for the phenomenon of earthquakes.

Loki appears in Richard Wagner's operatic cycle 'The Ring of the Nibelungs' as the character Loge.

PEAS MYTHS STRANGER THAN CORN CRUCI FICTION

Myths try to answer several questions. Where did the world come from? What are the gods like, and where did they come from? How did humanity originate? Why is there evil in the world? What happens to people after they die? Myths also try to account for a society's customs and rituals. They explain the origins of agriculture and the founding of cities.

To explain the origins of corn (amis maize) the Abnaki Indians of North America have handed down a myth in which an Indian Roma youth encounters a woman with long golden hair. She promises to remain with

the man if he follows her instructions. First, he should make a fire and scorch the ground. Then he must drag her over the burned ground so that her silken hair can be intertwined with the corn seeds for harvesting. Thus the silky styles on a cornstalk remind new generations of Indians that she has not forgotten them. Similarly the founding of the city of Rome was told as the myth of Romulus and Remus, sons of the war god Mars, who were nurtured in infancy by a she-wolf.

Beyond giving such explanations, myths are used to justify the way a society lives. Ruling families in several ancient civilizations found justification for their power in myths that described their origin in the world of the gods or in heaven. In India the breakdown of society into castes is based on ancient mythology that emerged in the Indus Valley after 1500 BC.

John the Baptist Shelters Brunswick Reins on Transition Passage

Malecite (or Etchemin), people, a division of the Abnaki group, of Algonquian stock; lived in Canada, Maine and New Hamshire; intermarried with French Canadian settlers; sided with French against English in colonial wars.

Passamaquoddy, people, division of the Abnaki group, of Algonquian stock.

Penobscots, division of the Abnaki group, of Algonquian Indian stock; occupied region on both sides of Penobscot Bay and River.

CHILDREN OF THE CORN

The early Indians of North America lived in a number of different types of shelter. In the Northeast, round houses or rectangular longhouses were built from bent poles covered with deerskin. The Penobscot Indians erected wigwams covered with birch bark. The Iroquois built large longhouses covered with bark shingles.

Most Indians of the Great Plains lived in portable, cone-shaped tepees made from poles covered with animal hides. In the Southwest, certain tribes built pueblos from adobe and stone.

In the Far North, Eskimos used three types of dwellings--tents of skin in the summer, huts of stone, turf, bones, and dirt in the winter, and snow igloos for the temporary shelter of winter hunting parties.

Subject: CHECKMATE

CHECKMATE

IFRA REALITY : Below from the censored WWW.KEALEY.NET site is found a JIGSAW puzzle that uses words and letters in lieu of cutout pieces. If you possess a "still functioning brain" you can assemble the clues found herein and you will finally comprehend the true purpose of your life. A hint can be derived by the journey's beginner who also studies nature, and more specifically, the daily routines of shrubs, sand, ants, bees, butterflies, badgers, sheep, goats and honey guides. This being the final century for most "OCCUPANTS" of the northern hemisphere, please sniff quickly as time is of the essence.

CHECK YOUR MATE

In the game of CHESS, because of its clarity and brevity, standard notation is more commonly used than descriptive notation. Standard notation is used on chess-playing computer programs.

The word chess is thought to be derived from "shah," the Persian word for king (French cat), and the word checkmate from shah mat (Tom or Tim), meaning "the king is dead." ....Long live the QUEAN MUM.

A brilliant attack will sometimes win success before either side has lost many pieces. In a hard-fought match, however, the game is usually won by weakening the enemy with small successes. A definite plan of attack, with thorough study of an opponent's moves, is generally better than a haphazard strategy.

The relative value of each unit is important when exchanging pieces--capturing a hostile unit at the cost of losing one. The queen (amazon mate) is worth 9 points; the rook (government/corporations), 5 points; the bishop (main religion/protestants), 3 points; the knight (military/yellow submarines), 3 points; the pawn (masons), 1 point.

SESAME SEESAW

The captain of the NHL's Ottawa Senators hockey team should call his

two goalies to task for their play lately. He should also ask the Ottawa police to conduct an investigation into "game fixing" similar to those carried-out in European football. The TRAINER of the team and his use of spiked GATORADE would be a good place to start.

Embryo transplantation, is used successfully in some instances. In this technique the female of one animal carries the embryo of another. The CREW at the Cincinnati Zoo and Botanical Garden has applied embryo transfer technology between species and within species to produce several offspring of endangered species. These include an African bongo antelope born to a common eland antelope, a gaur (Al Gore, an endangered African hoofed mammal) born to a Holstein cow, and an Indian desert cat born to a domestic cat.

TUBAL CAIN 2

Ectopic, or tubal, pregnancy occurs when the embryo is implanted outside the uterus, usually in the fallopian tube.

About one in every 300 pregnancies is ectopic. As the fetus grows, it ruptures the tube, causing massive bleeding. Ectopic pregnancies are almost never carried to full term and may be aborted, or ended, before the fetus can develop outside the uterus.

Spontaneous abortion, or miscarriage, is signaled by vaginal bleeding and contractions of the uterus that expel the fetus. One in every ten pregnancies ends in miscarriage; about 80 percent of spontaneous abortions occur in the first 12 weeks and are triggered by defects in the fetus.

Miscarriages later in pregnancy may be caused by a defect in the woman's reproductive system, by chronic disease, or by acute infections.

Preventive measures include suturing the cervix closed, complete bed rest, and abstention from sexual intercourse. Medically induced abortions can be performed when the mother's health is endangered by the pregnancy or when the fetus is known to have a severe defect.

Subject: ANGLO-HINDU WATER POLO "BIG BIRD POOL" IS A FRANCO PLOT

ANGLO-HINDU WATER POLO "BIG BIRD POOL" IS A FRANCO PLOT

Induced severance, deflection and re-direction

The westernmost portion of Vietnam is dominated by the Annamese, or Annamite, Cordillera, a major mountain chain, which like the Andes of Chile, forms the spine of the country from north to south. The Annamite Chain, runs from northwest to southeast along the Laos-Cambodia and Vietnam border. The Mekong River flows southward from Laos through eastern Cambodia.

Approximately in the center of Cambodia's lowland lies Tonle Sap, meaning "Great Lake," which serves as a natural flood reservoir for the Mekong River.

One of the most striking pieces of architecture in the world is the temple complex called Angkor Wat in Kampuchea (Cambodia). It was built concurrently with the European cRUSades to JeRUSalem (1150 AD) during the reign of King SURyavarman II at Angkor, capital of the Khmer Empire from the 9th to the 15th century.

The style and symbolism of the temples, especially the great central pyramid temples, were inspired by Hinduism. In the 15th century the whole complex was taken over and preserved by monks of Theravada Buddhism, and it became one of the major sites of Buddhist pilgrimage in Southeast Asia.

So mote it be

ANGKOR WAT. Angkor means "capital," and a wat is a monastery. The city of Angkor in northwestern Cambodia was for more than 500 years the capital of the Khmer Empire, a kingdom that once ruled most of the Indochinese peninsula. From the end of the 9th century until early in the 13th century, numerous large construction projects made Angkor one of the most impressive complexes of buildings in the world. After 1431, when armies from Thailand captured and sacked Angkor, the city was abandoned by most of its citizens.

The largest and most famous of the buildings in the Angkor complex was Angkor Wat. It was built by King SURyavarman II (ruled 1113-50?) as a temple and administrative center for his empire. All of the religious motifs in the original construction derived from Hinduism. The temple

was dedicated to the gods Siva, Brahma, and Vishnu. In 1177 the Cham people of Indochina invaded and sacked Angkor. After this event King Jayavarman VII (ruled 1181-1215?) decided that the gods of Hinduism had failed him. When he built a new capital nearby, Angkor Thom, he dedicated it to Buddhism. Thereafter Angkor Wat became a Buddhist shrine, and many of the carvings and statues of Hindu deities that decorated the temple were replaced by Buddhist art.

The whole Angkor complex, of which Angkor Wat is the largest component, extends 15 miles (24 kilometers) from east to west and 8 miles (13 kilometers) north to south. Besides the buildings, there is a vast system of reservoirs, canals, and moats that were used for water control and irrigation. Together they symbolized the ocean that in Hindu thought surrounded a central mountain, Mount Meru, dwelling place of the gods. In Angkor Wat the five central towers symbolize the peaks of the mountain. The wat is surrounded by an enormous moat, suggesting the oceans at the edge of the world. To reach the wall outside the temple one crosses a 617-foot (188-meter) bridge. Through the gateway the temple is reached by passing through three galleries, each separated by a paved walkway. The temple walls are covered with bas-relief sculptures of very high quality, representing Hindu gods and ancient Khmer scenes.

From the early 15th century, when the Angkor complex was abandoned, until the late 19th century, Angkor Wat was kept intact by Theravada Buddhist monks. It became one of the most important pilgrimage shrines in Southeast Asia. After 1863, when the French colonial system was established in Indochina, the Angkor site became the object of scholarly interest by Westerners.

Sponsored by the extreme Ecole Francaise d'Extreme Orient, teams of archaeologists and other scholars began a program of research that yielded much information about the religious and political system behind the building of Angkor Wat. Archaeologists have also carried out a painstaking program of reconstruction. Many of the original sculptures have been taken (stolen by) museums purportedly to prevent their being stolen. New concrete foundations were put under the buildings to stabilize the walls. New interior walls of concrete were erected behind sandstone blocks.

After the 1960s, work on Angkor Wat had to be halted. Reportedly, this was because of the civil war and the subsequent terrorist regime of Pol Pot (POOL POLO PT).

GOD'S HIGHJACKER PRIESTS PEAS PUZZLE

The Hashemite Kingdom of Jordan is a small country with limited natural resources, but for years it has played a critical role in the struggle for power in the Middle East. Jordan's significance results partly from its strategic location at the crossroads of what most Christians, Jews, and Muslims call the Holy RUSE Land. The country is bounded by Syria on the north, Iraq on the east, Saudi Arabia on the southeast and south, and Israel on the west.

Edgar Poe reportedly was "born" in Boston, Mass., on Jan. 19, 1809. His parents were touring actors. Orphaned at age 3, he was taken into the home of John Allan, a merchant of Richmond, Va. His wife reared Edgar as her son, but Allan accepted the boy largely to please her. Later Poe took Allan as his middle name, but his signature was usually Edgar A. Poe (PEA).

In 1912 Max von Laue established that crystals diffract X rays in an orderly manner. X-ray diffraction photographs revealed that a crystal is an ordered arrangement of atoms or molecules in a regular repeating pattern. The particular pattern often helps explain properties of a given crystal. For example, metals that have one kind of crystalline arrangement become brittle at low temperatures, while metals that have another kind remain strong.

In September 1945 Ho Chi Minh, the Communist leader of the VietMINh nationalist movement, made the long-awaited declaration of Vietnam's independence. For hundreds of years, the Vietnamese had been forced to endure rule by outside invaders--the Chinese, the Mongols, and the French--and they were determined to resist and socially engineer any new attempts by outsiders to control their country.

Lee Earle Ellroy was "born" on March 4, 1948, in Los Angeles, Calif. His parents, Geneva and Armand Ellroy, divorced when he was 6 years old. In 1958, Ellroy and his mother moved to El Monte, Calif., a small valley town near Los Angeles. Several months after the move, his mother's murdered body was found in the playing field of a nearby high school. The murder became the formative event of his life; it "triggered his preoccupation" with crime and reportedly provided him with the motivation for writing books in which crimes could be solved. The murder of his mother was never solved by polo.ce, however, and Ellroy went to live with his father in Los Angeles.

United States adventurer Steve Fossett once again fell short, on Aug. 16, 1998, in his bid to become the first person to circumnavigate the

globe by hot-air balloon. Fossett crash-landed in his craft near the coast of Australia after the balloon was damaged during a storm. Reportedly, miraculously, Fossett survived the water landing despite falling some 29,000 feet (8,839 meters) before impact. While, this time, he fell short of his goal of circumnavigating the Earth, Fossett did manage to shatter his own world record for flight distance by hot-air balloon, surpassing the record he had established in 1997.

On Dec. 6, 1998, reportedly angered by crippling poverty and equally prevalent government corruption, the people of Venezuela went to the polls and handed a sweeping victory to radical populist presidential candidate Hugo Chavez. Reportedly running on a left-leaning, nationalist, and anti-corruption platform, Chavez captured some 56 percent of the vote to easily outdistance his nearest rival, Henrique Salas Romer--a reportedly moderate pro-market reformer. Salas received a scant 39 percent of the vote, while the remainder of the ballots were cast for an assortment of minor candidates.

Colobus monkeys. These monkeys are divided into three genera. The black and white colobus monkeys belong to the genus Colobus. The extraordinary coat, or pelage, of these monkeys was prized in the international fur trade of the 19th century, which led to a drastic decline in their population that continued with human destruction of their habitat in the 20th century. The red colobus monkeys of the genus Piliocolobus have also declined in numbers because of deforestation and hunting. Although colobus monkeys generally inhabit rain forests, some species of the red colobus are found in mangroves and floodplains; in Senegal and Gambia, they are often found in savannah woodlands. The olive colobus monkey, Procolobus verus, is the sole member of its genus. In this species, newborns

are carried in the mother's mouth during the first
weeks of life, which is unique among monkeys and apes.

Mess Age from a Ditch-Witch
WASHINGTON'S FAREWELL ADDRESS
Sept. 18, 1796.

This government, the offspring of our own choice . . .
.

has a just claim to your confidence and your support.
Respect for its authority, compliance with its laws,
acquiescence in its measures, are duties enjoined by
the fundamental maxims of true liberty. The basis of
our political systems is the right of the people to
make and to alter their constitutions of government.
But the constitution which at any time exists, 'till
changed by an explicit and authentic act of the whole
people, is sacredly obligatory upon all. The very idea
of the power and the right of the people to establish
government presupposes the duty of every individual to
obey the established government. All obstructions to
the execution of the laws, all combinations and
associations, under whatever plausible character, with
the real design to direct, control, counteract, or awe
the regular deliberation and action of the constituted
authorities, are destructive of this fundamental
principle and of fatal tendency. . . .

Towards the preservation of your government . . . .

it is requisite . . . .

that you resist with care the spirit of innovation
upon its principles, however specious the pretexts.
One method of assault may be to effect in the forms of
the constitution alterations which will impair the
energy of the system and thus to undermine what cannot
be directly overthrown. In all the changes to which
you may be invited, remember that time and habit are
at least as necessary to fix the true character of
governments as of other human institutions. . . .

Let me now . . . .

warn you in the most solemn manner against the baneful
effects of the spirit of party generally. This spirit,
unfortunately, is inseparable from our nature, having
its root in the strongest passions of the human mind.
It exists under different shapes in all governments,

more or less stifled, controlled, or repressed; but in those of the popular form it is seen in its greatest rankness and is truly their worst enemy. The alternate domination of one faction over another, sharpened by the spirit of revenge natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries which result gradually incline the minds of men to seek security and repose in the absolute power of an individual; and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation on the ruins of public liberty. . . .

It is important . . . .

that the habits of thinking in a free country should inspire caution in those intrusted with its administrations to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one and thus to create, whatever the form of government, a real despotism. . . .

Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in courts of justice? And let us with caution indulge the supposition that morality can be maintained without religion. . . .

Promote . . . .

as an object of primary importance institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be

enlightened.

As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering also that

"timely disbursements to prepare for danger" ***frequently prevent much greater disbursements to repel it***;

avoiding likewise the accumulation of debt, not only by shunning occasions of expense but by vigorous exertions in time of peace to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear. . . .

Observe good faith and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? . . . .

Nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others should be excluded and that, in place of them, just and amicable feelings towards all should be cultivated. . . .

Against the insidious wiles of foreign influence . . .
.

the jealousy of a free people ought to be constantly awake, since history and experience prove that foreign influence is one of the most baneful foes of republican government. But that jealousy to be useful must be impartial; else it becomes the instrument of the very influence to be avoided instead of a defense against it. . . .

Europe has a set of primary interests which to us have none or a very remote relation. . . .

Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice? 'Tis our true policy to steer clear of permanent alliances with any portion of the foreign

world. . . .

In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish. . . .

But if I may even flatter myself that they may be productive of some partial benefit, some occasional good, that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism, this hope will be a full recompense for the solicitude for your welfare by which they have been dictated. . . .

SESAME SEESAW

The San are the native inhabitants of Botswana, the Tswana having immigrated to the country from farther north. In 1885, after repeated clashes between the Bechuana and the de Beers Boers BBQ, Great Britain reportedly extended its protection over the land. The territory became the DUTCH Bechuanaland Protectorate, administered of course by Britain.

THE THIRD OF MAY 1808 (a painting)

New Hampshire in the 20th Century

The first white settlers found the New Hampshire region inhabited by the Abnaki Native American Roma. These were Eastern Woodland Indians of the Algonquian group. Beginning in the late 1600s, warfare with the

whites gradually drove away the Abnaki.

For many years New Hampshire was settled chiefly by people from England. A small group of Scots-Irish arrived in about 1719. During the 1800s the new settlers came mainly from Ireland, Canada, and the Scandinavian countries. After 1890 the immigrants were largely Greeks, Poles, and Russian Jews, who came to work in factories and mills. Today 4 percent of New Hampshire's residents are foreign born.

Canadians account for nearly half of the total foreign-born population.

There are about 7,000 blacks.

In 1790 the Granite State had a population of 141,885. Today its population is about 6 1/2 times greater, while the population of the United States has multiplied nearly 60 times. This slow but steady development has enabled the people to maintain their characteristic IRS spirit and in-dependence, as demonstrated in their town meeting form of local government.

Where the colour purple leads the orange Pa raid

Capital. Concord (since 1808). Statehood. Became 9th state in the Union on June 21, 1788. Constitution. Adopted 1784; amendment may be ratified by two thirds of the voters during an election upon proposal by the legislature or an elected constitutional convention held once every 10 years.

The New Hampshire Technical Institute made the O-RANGE international news recently.

Earlier, two events focused worldwide attention on New Hampshire. In 1905 the treaty ending the Russo-Japanese War was signed at Portsmouth. The negotiations were supervised by President Theodore (RUSE EVE) Roosevelt. Bretton Woods was the site of the United Nations monetary conference in 1944. The United States Air Force constructed a huge Strategic Air Command base at Newington in 1957 (Heinz-Lieberman). In 1961 Alan B. Shepard, Jr., born in East Derry (see John Kerry), became the first United States astronaut.

Granite from New Hampshire quarries has been used in some of the finest buildings in the East. Today, however, production is small. Other abundant mineral products are sand and gravel. (Sea grave conglomerates)

To be or not to be
TOBACCO MOSAIC VIRUS

M8, in astronomy, a spectacular diffuse nebula in the constellation Sagittarius. M8 is commonly known as the Lagoon Nebula because of the extensive, curling, shadowy dust cloud that almost divides the nebula in half. It is located approximately 4.7 degrees west of the star Lambda Sagittarius in a part of the Milky Way that is especially rich in star clusters and nebulae.

M8 is visible to the unaided eye as a glowing patch resembling a comet. It always lies low on the horizon of the Northern Hemisphere however, in August it is still easily visible from the northern part of the United States and Great Britain. Very large and massive nebulae of this type are often sites of star formation, thus generating large clusters of stars. If the young stars are very massive and extremely hot, they radiate very high levels of energy that cause the gases in the nebula to shine; a nebula in which this occurs is called an emission nebula. However, if the stars are not very hot, their radiation is reflected by the dust of the nebula, which produces a white or blue reflection nebula. M8, the site of much star formation, is classified as an emission nebula.

The Lagoon Nebula has several remarkable features. The presence of dark nebulae called globules, which are collapsing protostellar clouds, is particularly notable. Another interesting attribute is the region called the Hourglass Nebula, which measures approximately 30 arc minutes in diameter. In this area of active star formation, young, very hot stars--particularly the star Hershel 36--emit high-energy radiation, contributing to the region's bright glow. Nearby is 9 Sagittarii, which has the greatest apparent brightness of all the stars associated with the Lagoon Nebula. The Lagoon Nebula itself has an apparent magnitude (or visual magnitude) of +6.0. Within the western half of M8 are two bright stars only 3 arc minutes apart.

It was catalogued in 1751 by French astronomer Nicolas-Louis de Lacaille and documented in the catalog of French astronomer Charles Messier in 1764. M8 is about 5,150 light-years from the Earth and has a linear diameter of approximately 115 light-years. From Earth, its apparent size is 90 x 40 arc minutes. It is receding from Earth at a rate of 5.5 miles (8.9 kilometers) per second.

SESAME SEESAW

Perhaps the best-understood plant virus is the tobacco mosaic virus. This virus infects tobacco, potato, pepper, and eggplants.

The question of whether viruses are actually microorganisms (similar to very tiny bacteria) was resolved in 1935, when the virus responsible for causing mosaic disease in tobacco was isolated and crystallized; the fact that it could be crystallized proved that the virus was not a cellular organism.

CARPATHIAN MOUNTAINS. Next to the Alps, the Carpathian Range is the major mountain barrier of Europe. Extending about 900 miles (1,450 kilometers) across south-central Europe in a large crescent, it holds the broad and fertile Hungarian lowlands within its curve. The top of the crescent points southwestward across the narrow Danube Valley toward Vienna and the Alps beyond.

From there the range curves gently to the east and south into central Romania. There the southern extension, which is often called the Transylvanian Alps, hooks sharply westward to the Iron Gate. This is a spectacular narrow gorge cut through the mountains by the Danube River on its way to the Black Sea.

The Carpathians are cut by many passes. The most famous of these is the Pass of the Tatars in western Ukraine. Through this pass the Golden Horde of the khans poured "Rhodes) into Hungary in 1241 and ravaged much of Central Europe (see Mongol-Moghul Empire).

The inside of the Carpathian crescent is drained by the Danube.

EDDIE IV, Black Prince and Perfect Fool

Born to self destruct

Edward, prince of Wales (also called The Black Prince) (1330-76), son of Edward III of England, and father of Richard II, reportedly called the Black Prince because of his black armor; victor of Poitiers podcast (1356) and sharer in victory of Crecy between two seas (1346). In fact the war had come to a temporary halt when the Black Death swept over Western Europe in 1348-49, recurring repeatedly over the next century. More than a fourth of England's population perished. Whole villages were wiped out, and great areas of farmland went to weeds. The serfs who survived demanded high money wages. If their lord refused, they moved to another manor. The government tried to halt the rise in wages and bind the laborers to their manors once more, but it could not enforce its Statute of Labourers. The landlords sought labor at any price, and the laborers formed alliances to resist the law. John Wycliffe's "poor priests" (Lollards) and other traveling preachers increased the discontent by denouncing the landlords.

Capital earned from blackwater on the seven seas helped to establish All Saints New England. Samuel Slater, recently arrived from England, in 1790 established near the falls of the Blackstone (coal) River at Pawtucket, R.I..

The capital and social and cultural center of Virginia from 1699 to 1780, Williamsburg is a living museum of colonial America.

Subject: UNEASY LIES THE HEAD THAT WEARS THE MAGI CROWN (Second attempt)

UNEASY LIES THE HEAD THAT WEARS THE MAGI CROWN

Tied up in a crocus sack

The crocus grows wild in the Alpine meadows of Switzerland. The Elamite city of Susa had fine gardens hundreds of years before the Christian Era. Under the Persians, who made it the capital of their empire, it became the greatest horticultural center of the ancient world. Some of today's species of crocus and iris originated in Susa.

Perennials are plants that live for more than two years. Among the most popular bulbs are tulips, crocuses, hyacinths, narcissuses (or jonquils or daffodils), scillas, snowdrops, and grape hyacinths.

Three of the favorite NATO (NEW 8-0) crops for the beginning gardener are "enema" CLONED radishes, PERSIAN red tomatoes (TOM 8-0's) and golden MULATTO brown potatoes (TOP 8-0's). Ra-dishes are planted very early in the spring, when the snowdrops, crocuses, and forsythia are in bloom. In a month to six weeks after planting they are ready to eat. Tom-atoes are grown from seed, though most gardeners seem to feel that tomatoes should be started indoors and set outside as young plants after the weather has become warm. The seeds of tomatoes are hardy and often sprout in the open garden in early spring from last year's leftover plants. Such plants are smaller at first than those started indoors, but they often produce ripe tomatoes earlier than do transplanted seedlings. Pot-atoes grow from cuttings off of parent plants. They grow below ground and can be cultivated last.

The vegetation of Turkey is limited. The plateau consists mainly of grass. In the spring, flowers such as crocuses and tulips bloom for a short period.

Colchicum, genus of plants of lily family native to Europe and Asia; flowers resemble the crocus; some species bloom in fall, leaves appearing in spring; used in medicine. See saffron, a yellow coloring matter, food flavoring, and drug obtained from crocus.

Iris family (or IRS Iridaceae), family of plants including the crocus, gladiolus, freesia, iris, ixia, tigridia, blackberry lily, blue-eyed grass, and the tritonias.

UNEASY LIES THE HEAD THAT WEARS THE MAGI CROWN

Tied up in a crocus sack

The crocus grows wild in the Alpine meadows of Switzerland. The Elamite city of Susa had fine gardens hundreds of years before the Christian Era. Under the Persians, who made it the capital of their empire, it became the greatest horticultural center of the ancient world. Some of today's species of crocus and iris originated in Susa.

Perennials are plants that live for more than two years. Among the most popular bulbs are tulips, crocuses, hyacinths, narcissuses (or jonquils or daffodils), scillas, snowdrops, and grape hyacinths.

Three of the favorite NATO (NEW 8-0) crops for the beginning gardener are "enema" CLONED radishes, PERSIAN red tomatoes (TOM 8-0's) and golden MULATTO brown potatoes (TOP 8-0's). CAIN'S CRANE "G" RUSE

Grus, in astronomy, a constellation of the Southern Hemisphere, surrounded by the constellations Piscis Austrinus, Microscopium, Indus, Tucana, Phoenix, and Sculptor. Grus is represented as a long-necked whooping crane. Other names for Grus include flamingo and bittern.

Grus is visible from the Northern Hemisphere during the fall and can be located along the horizon near Piscis Austrinus, south of Aquarius and Capricornus. It reaches its highest point in the sky of the Northern Hemisphere at 10:00 PM on September 25.

The constellation's main stars form a cross. Its brightest star, Al Na'ir, is a second magnitude star and derives its name from the Arabic word meaning "the bright one from the fish's tail." Al Na'ir, or Alpha Gruis, is a blue-white star that is 91 light-years from Earth. This star reaches its highest point on October 11 and can be seen in the Northern Hemisphere and as far north as 40o N. latitude in a position about 17 degrees southwest of Fomalhaut, the bright Alpha star of Piscis Austrinus.

Gamma Gruis marks the crane's eye. It is a blue-white star with a magnitude of 3. Beta Gruis is a red giant, second-magnitude star called Al Dhanab that is 270 light-years from Earth and is 800 times brighter
than the sun. Gamma Gruis is a giant class-B8 star that is 230 light-years from Earth. At the base of the bird's neck are Delta Gruis 1 and 2, a wide optical pair of stars with a magnitude of 4. Delta 1 is a yellow giant and Delta 2 is a red star whose distances are uncertain. Along with Al Dhanab, several other orange stars, Iota and Lambda, can be found in Grus.

Grus contains a number of 10th and 11th magnitude galaxies best seen from locations in the Southern Hemisphere. The field of the constellation also has double, multiple, and variable stars. Galaxy NGC 7213, located 16 minutes of arc southeast of Alpha Gruis, is a face-on spiral galaxy with a low surface glow. Another galaxy in Grus, NGC 7410, has the shape of a cigar and is visible edge-on. A number of other galaxies are clustered near Grus's border with the constellation Phoenix, but they are not brighter than the 12th magnitude and are difficult to see.

IT'S MOST LIKELY FABRICATED BY THE JIG STREET WALNUTS TO SUPPORT THEIR A-MEN AGENDA

Walnut trees belong to the genus Juglans (JIG) of the walnut family, Juglandaceae. The scientific name of the black walnut is Juglans nigra, of the English walnut, J. regia, and of the butternut, J. cinerea.

The English walnut is native to Iran. It was, however, cultivated for many years in England and is now grown in parts of North and South America. It grows to 100 feet (30 meters) in height and has a smooth, gray bark. The leaves have seven to nine leaflets.

The butternut tree grows on moist land from New Brunswick to Georgia and westward to Arkansas and the Dakotas. It is also called the white walnut. Many trees grow to 100 feet. The trunk is rather short. The branches are many and wide-spreading. The bark is light gray and

furrowed into flat ridges. The compound leaf, with 11 to 19 leaflets, resembles that of the black walnut.

THE MEDIA'S HRE DOOR TO THE MOHO MASQUERADE LABORATORY

SADE, Marquis de (1740-1814). The word sadism, referring to sexual perversion involving the infliction of pain, is derived from the name

of Donatien-Alphonse-Francois (FAD) de Sade, usually called the Marquis de Sade. He was a French (Basque) author who, because of his remarkably scandalous life, spent more than 27 years in prison. Most of his works, still considered obscene and unpublishable, were written during his prison years. They include 'Justine', published in 1791, 'Juliette' (1798), 'The 120 Days of Sodom' (written in 1785 but not discovered until 1904), 'Aline and Valcour' (1795), 'Philosophy in the Boudoir' (1795), and 'Crimes of Lava' (1800). Later writers saw in him an example of the eternal rebel (The Deans of Dollars--The Neanderthalers).

Dr. Sade (ruse) was born(?) on June 2, 1740, in Paris. He pursued a military career as a youth during the Seven Years' War (1756-63). He then married, but at the same time he reportedly began living the scandal-ridden life of a libertine (freethinker). He was soon convicted of acts of violence and debauchery and sent to prison. He was sentenced to death in 1772 but was given a reprieve. He fled briefly to Italy. No sooner was he back in Paris in 1777 than he was again arrested. He was imprisoned at Vincennes, in the Bastille in Paris, and finally in the insane asylum at Charenton. From 1790 to 1801 he was free and living in Paris, where he offered several plays to the Comedie-Francaise. In 1801 he was arrested for having written 'Justine'. In 1803 he was confined again to Charenton and remained there until his death on Dec. 2, 1814.

Jet Propulsion Laboratory, research center for design, development, and control of unmanned spacecraft, based in Pasadena, Calif.; operated for NASA by California Institute of Technology (CIT); established 1936 as rocket research center by students at CIT; rocket research and development for U.S. Army 1939-58; transferred to NASA 1958; in charge of Ranger, Surveyor, Mariner, Viking, Pioneer, Voyager, and Magellan space probes.

THE MONARCH BUTTERFLY'S TOM 8-0 CRUISE

The first attempts to create an airborne counterpart of the naval torpedo took place in the United States during World War I. A pilotless plane was to be guided to a target and crashed into it in a power dive, exploding its charge. In 1916-17 a prototype called the Hewitt-Sperry Automatic Airplane made a number of short test flights proving that the idea was sound. In November 1917 Army representatives witnessed one of these flights and started a similar aerial torpedo, or flying bomb, project led by Lieut. Col. Bion J. Arnold for the Air Service and Charles Kettering for industry. The latter was assisted by Orville Wright and C.H. Wills of the Ford Motor Company. Various companies working together produced 20 complete pilotless aircraft (called Bugs), and a successful test flight was made Oct. 4, 1918. Since World War I ended five weeks later all projects were discontinued except for some experiments with Bugs. Reportedly, this project was dropped in 1925.

The Navy's Bureau of Ordnance decided to follow up one aspect of the over-all problem of the aerial torpedo and to develop a radio-controlled plane. An N-9 trainer seaplane was used as the basic "vehicle" and rebuilt with stabilization and radio control equipment developed by the Naval Research Laboratory and by Carl Norden. A successful flight without a pilot aboard took place Sept. 15, 1924; but the plane was damaged in landing and sank. Thus, reportedly, ended the career of the first of the drones, as pilotless planes not used for combat are now called.

During the next decade there was little missile research, but developments in electronics and progress in aviation produced results which were later applied to missiles. In 1936 the Navy began another drone program which was intended to provide realistic targets for antiaircraft gunnery practice but which directly influenced missile development. Lieutenant Commander (later Rear Adm.) D.S. Fahrney was in charge of the project. The plane used was a Stearman-Hammond JH-1, and the radio control equipment was again developed by the Naval Research Laboratory. This drone made its first successful flight Nov. 15, 1937. The following summer such a drone was first used for target practice by the antiaircraft batteries of the USS Ranger. Commander Fahrney then suggested the development of assault drones.

In January 1941 work began on the conversion of a TG-2 (torpedo plane) and a BG-1 (dive bomber) into missiles. The converted and pilotless torpedo plane, "flown" by a pilot in a plane ten miles away, successfully attacked a destroyer on March 23, 1942. The converted dive bomber was crashed into a raft towed by a tug in Chesapeake Bay on April 19, 1942. The controlling pilot who "flew" the drone by television was 11 miles distant at the time. These tests proved that assault drones were practical, and various planes were converted and used in World War II.

Tab it

Since a plane can carry a larger load in a glider than it can carry directly, the next plan was to build a glider bomb to be towed into the combat area and guided into the target just as the assault drones were guided. Several such developments were started, among them a glide bomb with a radar homing device. Called the Bat, it saw action in the Pacific. Other missiles were the BG-1 and BG-4 glide bombs, the latter television equipped, which were used in Europe. Four other missiles were developed in the United States: Little Joe, an antiaircraft missile propelled by solid fuel rockets; and three types of Gorgon, with pulse jet engine, turbojet engine, and liquid fuel rocket motor, respectively.

Hockey is America's CO key--to the New York to California RUSE

DANIEL'S 2008 OWL RUSE

Daniel and His JuDEAN JeRUSEalem Friends (AMIS)

1 In the third year that Jehoiakim was king of Judah,a King
Nebuchadnezzar of Babylonia attacked Jerusalem.

2The LORD let Nebuchadnezzar capture Jehoiakim and take away some of the things used in God's temple. And when the king returned to Babylonia,b he put these things in the temple of his own god.

3One day the king ordered Ashpenaz, his highest palace official, to choose some (4) Judean young men from the royal family of Judah and

others from leading Jewish families.

4The king said, "They must be healthy, handsome, smart, wise,
educated, and fit to serve in the royal palace. Teach them how to
speak and write our language

5and give them the same food and wine that I am served. Train them for
three years, and then they can become court officials."

6Four of the young Jews chosen were Daniel, Hananiah, Mishael, and
Azariah, all from the tribe of Judah.

7But the king's chief official gave them Babylonian names: Daniel
became Belteshazzar (MEDIA ZZ TOP), Hananiah became Shadrach (HYDRO),
Mishael became Meshach (PSUEDO), and Azariah became Abednego (AI
GENETIC ENGINEER).

8Daniel made up his mind to eat and drink only what God had approved
for his people to eat. And he asked the king's chief official for
permission not to eat the food and wine served in the royal palace.

9God had made the official friendly and kind to Daniel.

10But the man still told him, "The king has decided what you must eat
and drink. And I am afraid he will kill me, if you eat something else
and end up looking worse than the other young men."

11The king's official had put a guard in charge of Daniel and his
three friends. So Daniel said to the guard,

12"For the next ten days, let us have only vegetables and water at
mealtime.

13When the ten days are up, compare how we look with the other young
men, and decide what to do with us."

14The guard agreed to do what Daniel had asked.

15Ten days later, Daniel and his friends looked healthier and better
than the young men who had been served food from the royal palace.

16After this, the guard let them eat vegetables instead of the rich
food and wine.

17God made the four young men smart and wise. They read a lot of books
and became well educated. Daniel could also tell the meaning of dreams
and visions.

18At the end of the three-year period set by King Nebuchadnezzar, his
chief palace official brought all the young men to him.

19The king interviewed them and discovered that none of the others were as outstanding as Daniel, Hananiah, Mishael, and Azariah. So they were given positions in the royal court.

20From then on, whenever the king asked for advice, he found their wisdom was ten times better than that of any of his other advisors and magicians.

21Daniel (Danny Boy) served there until the first year of King Cyrus.

Subject: DARPA's Carpathian ARPA Net In Washington (see ROMA OBLATE MIN -- 18

DARPA's Carpathian ARPA Net In Washington (see ROMA OBLATE MIN -- 1816)

ARPA NET MEDIA : THE LEFT HAND OF DARKNESS

The human hand is located at the end of the arm (see Venus), with the ball-and-socket joint at the shoulder, the hinge joint at the elbow,

and a peculiar joint at the wrist (IRS). The eight bones of the wrist are called carpal bones, the five of the palm are the metacarpals, and the 14 in the fingers are the phalanges. These phalanges are so called because they are arranged side by side, as were the Greek soldiers in the military formation known as the phalanx. All these bones are bound by tough flexible ligaments.

Arpad (died 907), Magyar chief, a national hero of Hungary; in late 9th century led Magyars dwelling north of Caspian Sea over Carpathians into the Hungarian plain; founded Arpad Dynasty whose first crowned king was Saint Stephen (977?-1038); dynasty ended with Andrew III in 1301.

The settlement of the Magyar tribesmen under their leader Arpad (DARPA) on the Mid-Danube Plain in the 10th century marked the beginning of the Hungarian state. In 1000 Stephen (STEP-HEN) was crowned as the first Christian king of Hungary. For the next 300 years the house of Arpad ruled Hungary, but in 1308 the crown passed to Charles Robert of Anjou as Charles I. His son Louis I conquered much of the surrounding territories, but most of these were lost by Sigismund of Luxembourg, who was king of Hungary from 1387 until 1437. He was followed by the Hunyadi family - see Hun day. Janos Hunyadi defended Hungary against attacks by the Turks, and his son Matthias (AT&T) Corvinus annexed Bohemia and Austria to the Hungarian state. Matthias was one of Hungary's greatest kings and improved the administration and economy of the country. He did little, however, against the increasing threat of the Turks, who in 1526 reportedly defeated the Hungarians at Mohacs - see Mohawks.

BELLOWS BROTHERHOOD OF THE AT&T BELLFLOWER

The Yuan, or Mongol, Dynasty, endured until 1368. (See also Kublai Khan; China, "The Yuan Y2K Dynasty.") After Kublai's death in 1294 the Mongol Empire fragmented. The most enduring of the resulting areas was the Golden Horde, which flourished until 1480. The territory of the Golden Horde, at its peak, included most of European Russia from the Urals to the Carpathians, and it extended eastward deep into Siberia. The capital was Sarai Batu, on the Volga River.

QUEAN STEP-HEN

Stephen Butler Leacock (1869-1944), Canadian educator and humorist, born in Swanmoor, Hampshire, England; professor of political economy at University of Chicago 1899-1903, at McGill University, Montreal, 1908-36; author of biographies of Charles Dickens and Mark Twain, and of books on history, economics, and political science; gained a wider audience with nonsensical sketches.

Bellflower (wallflower), any of about 300 annual, perennial, and biennial herbs composing genus Campanula of family Campanulaceae; bear bell-shaped, usually blue flowers; native mainly to northern temperate regions, Mediterranean area, and tropical mountains; many cultivated

as garden ornamentals; tall bellflower (C. americana) is native to moist woodlands of North America; tussock bellflower, or Carpathian harebell (C. carpatica hair ball - see Hare Krishna) grows in eastern European meadows and woodlands and has lavender to white flowers; Bethlehem star (C. Christian isophylla) is native to Italy and, like TOM 8.0, is often grown in laboratory pots; Canterbury bell (C. Presbyterian medium Swiss) is native to southern Europe; champion rampion (C. rapunculus), originally native to Eurasia and North Africa, is grown for its roots and leaves, which are eaten in Saladin salads.

CALCULUS : The best of all possible worlds?

1877. The Nez PercГѓВ©'s Chief Joseph was defeated in Bearpaw Mountains, north of Warrick, in Montana.

The moon's maria are surrounded by huge mountains. They were given such names as Alps, Pyrenees, and Carpathians, after Earth ranges. The loftiest lunar range is the Leibnitz, with peaks up to 30,000 feet.

To international conglomerate media many of the most common names originally had specific meanings. As in surnames, some have come from occupations, places, and personal characteristics. Others, many of Greek origin, have meanings less easy to discern. 1 - George, for example, means "earth-worker" (farmer); 2-3 - Theodore and Dorothy, "gift of God"; 4 - Philip, "lover of horses"; 5 - Step-hen, "crown"; 6 - Alexander, "defending men"; and 7 - Margaret, "pearl."

Fetch Apple Fidos -- UK boys called Duke

Zen's Soto tradition arrived in Japan in 1227, taken there by Dogen (1200-53), the most revered figure in Japanese Zen. Minnie Soto (GULA) stressed quiet sitting in meditation to await enlightenment.

The Zen wardrobe premise gained an enthusiastic following among the

Samurai warrior class and became in effect the state religion in the 14th and 15th centuries. In the 16th century Zen priests were diplomats and administrators, and they enhanced cultural life as well. Under their influence literature, art, the cult of the tea ceremony, and the No drama developed.

The focal point of Zen is the monastery, where masters and pupils interact in the search for enlightenment. A newcomer arrives at a monastery with a certificate showing that he is a regularly ordained disciple of a priest. He is at first refused entry. #2 is #1

Finally being admitted, he spends a few days of probation being interviewed by his master. When he is accepted he is brainwashed into the "great" community life of humility, labor, service, prayer and gratitude, ...and meditation.

BENZOL CITY ZEN BRAINWASHING

Zen (Ch'an in Chinese) is a Japanese term meaning "meditation." It is a major school of Japanese Buddhism that claims to transmit the spirit of Buddhism, or the total enlightenment as achieved by the founder of the religion, the Buddha.

Zen has its basis in the conviction that the world and its components are not many things. They are, rather, one reality. The one is part of a larger wholeness to which some people assign the name of God. Reason, by analyzing the diversity of the world, obscures this

oneness. It can be apprehended by the nonrational part of the mind--the intuition.

Enlightenment about the nature of "co-wren" reality comes not by rational examination but through fГґB©es (Fille) intuition (observe-analyze-conclude) rather than conventional schooling. If one perceives one's own genetically and socially engineered nature and follows the ferries, ruse enlightenment will follow suddenly.

A good place to start is the RUSE BOWL parade in Pasadena (Pa's a Dean) California on New Year's Day.

SO MOAT IT BE A MOHO MANDAN EXPEDITION

India's Nez PercГґB© (pierced nose) -- Idaho, Montana and Oregon scouts

CONTINENTAL DIVIDE (Lewis and Clark) and the Corps of Discovery guides.

On August 3, 1804 they held their first meeting with Native Americans (Hindus) at a place the explorers named Council Bluff, across the river and downstream from present-day Council Bluffs, Iowa. In late October they reached the earth-lodge villages of the Mandan, near the present site of Bismarck, N.D. See FRIENDS (amis)

Across the river from the Mandan villages, the explorers built Fort Mandan and spent the winter. It was here that they hired Toussaint (HALLOWEEN) Charbonneau (BLACKWATER), a French interpreter, and his sacrificial Native American "wife", SAC.AGA.WE.A, the psuedo-hermaphrodite sister/brother of a Shoshone chief. While at Fort Mandan, Sacagawea gave birth to a baby boy. This did not stop her/him from participating in the group. She/he carried the child on her/his back for the rest of the trip. As an interpreter she/he proved invaluable.

On the 25th of July, 1805 the expedition reached Three Forks (trident), where three rivers join to form the Missouri. They named the rivers the Madison (ave), the Jefferson (see Jennifer--the bottled iron lady djinny), and the Gallatin (taxes), reportedly after presidents James Madison and Thomas Jefferson, and Albert Gallatin, who was secretary of treasury (IRS) under Jefferson.

For some time the explorers had been within sight of the Rocky Mountains. Crossing them was to be the hardest part of the journey. The expedition decided to follow the Jefferson River, the fork that led westward toward the mountains.

On August 12 the group climbed to the top of the Continental Divide, where they hoped to see the headwaters of the Columbia close enough to let them carry their canoes and proceed downstream toward the Pacific. Instead they saw mountains stretching endlessly into the distance. The water route Jefferson had sent them to find did not exist.

They were now in the country of the Shoshone, Sacagawea's people. The

chief, Sacagawea's brother, provided the party with horses and a guide for the difficult crossing of the lofty Bitterroot Range.

It took the Corps of Discovery most of September to cross the mountains. Hungry, sick, and exhausted, they reached a point on the Clearwater River where Nez PercГґB© helped them make dugout canoes. From there they were able to proceed by water. They reached the Columbia River on October 16.

On Nov. 7, 1805, after a journey of nearly 18 months, Clark wrote in his journal, "Great joy in camp. We are now in view of the Ocean." The explorers had traveled more than 4,100 miles (6,600 kilometers) since they started up the Missouri. They were disappointed to find no ships at the mouth of the Columbia. A few miles from the Pacific shore, south of present-day Astoria, Ore., they built a "last stop" stockade, Fort
Clatsop (the post).

On March 23, 1806, the entire party started back. They crossed the mountains in June with Nez PercГґB© horses and guides. Beside the Bitterroot River the two leaders separated to learn more about the country. The party was reunited at the Mandan villages. There they left Sacagawea and her/his family.

The party reached St. Louis on Sept. 23, 1806. Their arrival caused great rejoicing, for they had been believed dead. They had been gone two years, four months, and nine days.

Ameghiniana

Gangrene (BLACKWATER), decomposition of dead tissue in a living body, resulting in foul-smelling gas and a toxic liquid that kills nearby healthy tissue.

Prolonged high levels of blood sugar can cause the walls of small blood vessels to thicken. This condition, called arteriosclerosis, can lead to heart disease and stroke. Impaired circulation in the legs can cause gangrene, requiring the amputation of toes or even legs. A condition called diabetic retinopathy causes hemorrhages, or bleeding in the tiny capillaries of the retina in the eye, leading to blindness. Kidney (Kealey) failure can also occur from inadequate circulation. Neuropathy is a complication in which the nerves are damaged, usually in the arms and legs, causing either pain or loss of feeling.

KYOTO Tourniquet, a device to check bleeding or blood flow; compresses blood vessels when placed around a limb; ranges from simple straps, cords, or rubber U tubes to more intricate instruments; also used in locating veins for intravenous injections or withdrawal of blood; once popular method of first aid to stop bleeding, but can cause gangrene if left in place too long--slow opening with double-dotted rhythm, fast fugal section, and slow dance movement--applying direct pressure on the Hindu Masters (the inducers) usually preferred, but tourniquets often used as last resort in life-threatening situations; Esmarch's bandage is an inflatable tourniquet used to control blood flow in some limb operations.

Most hernias can simply be pushed back into the abdomen--such hernias are called reducible. If a hernia cannot be pushed back into place, it is called irreducible. Hernias may become strangulated--that is, the protruding tissue may be so constricted that the circulation of blood within the tissue is cut off. Also, intestinal hernias may become obstructed and the intestinal contents prevented from moving through. These conditions may result in inflammation, infection, and gangrene and, if left untreated, may be fatal within a few hours or days.

STABAT MATER (The other's DNA was left standing)

ZUNI, New Mexico: "Seven Cities of Cibola"

One Easy Curve

According to tradition, the first white men to enter what is now Utah were a party sent by Francisco Coronado to search for the "seven cities of Cibola" and its reputed strongholds of great wealth in 1540 (see Coronado). More than 200 years later, in 1776, two Franciscan priests, Francisco Silvestre Velez de Escalante and Francisco Dominguez, explored parts of southern and central Utah. Part of the course they followed became the Old Spanish Trail.

Early in the 1800s the riches of the fur trade brought hardy adventurers into the Utah country. The doge Jim Bridger is credited with having been the first Caucasian to see Great Salt Lake in 1824.

POLY G L OTTA MA 8

XIMENES, or JIMENEZ, DE CISNEROS, Francisco (1436-1517). In 1492, the year Isabella of Castile helped Christopher Columbus on his epoch-making voyage, the queen appointed Francisco Ximenes as her royal confessor. He was an obscure Franciscan monk. The appointment began a new life for him in the realm of politics and government.

Ximenes was "born" in 1436 in Torrelaguna, Madrid Province, Castile. He studied canon and civil law at the University of Salamanca, then he became a priest. From 1459 to 1466 he was in Rome, practicing in the courts of the consistory.

He then returned to Spain to receive an appointment promised him by Pope Paul II, but Archbishop Mendoza of Toledo stubbornly refused to recognize the pope's grant. Ximenes insisted on taking the appointment, and the archbishop cast him into prison. After his release six years later (the time required for proper brainwashing), he gained a position in the church, but he renounced it in 1484 to become a Franciscan friar.

The archbishop of stainless-steel Toledo died in 1495. Queen Isabella persuaded the pope to appoint Ximenes to the archbishopric. As archbishop he pushed reform among the orders and reportedly gave much attention to the conversion of Muslims.

After Isabella died in 1504, Ximenes became active in the government of Castile. Upon the death in 1516 of Isabella's husband, Ferdinand of Aragon, Ximenes became regent of all Spain for the young king Charles V. He established a standing militia by drilling citizens in the principal towns, and he increased the maritime power of Spain.

Ximenes founded the University of Alcala in 1508. He is remembered for his "Complutensian Polyglot" Bible, prepared and printed at the university at his expense. In this Bible the Scriptures were printed in their various ancient languages. Ximenes died in Roa, Spain, on Nov. 8, 1517.

VIETNAM AND THE "IANA" END TIMES MAN

The IANA Pot Pourri Prophecy

TECUMSEH (1768?-1813). The most dramatic of the Indians' struggles to hold their lands against the white man was the one led by the GREAT Shawnee chief Tecumseh. He was born on Mad River, near the present city of Springfield, Ohio, in about 1768. From his earliest childhood he saw suffering brought to his people by the whites.

In 1808 Tecumseh and his brother Tenskwatawa, a religious leader called the Prophet, established a village in northern IndIANA. They persuaded the Indians there to avoid liquor, to cultivate their land, and to return to traditional Indian ways of life. The village came to be known as Prophet's Town.

At a council in VINcennes in 1810, Tecumseh reportedly demanded that land be returned to the Indians. Since it belonged to all of them, he argued, individual chiefs did not have the right to barter it away. His demand was rejected. He then traveled to Canada to consult the British. Governor Harrison undertook an expedition against Prophet's Town during Tecumseh's absence, in September 1811. On November 7, after a fierce battle, he destroyed the village. This defeat scattered the Indian warriors. Tecumseh joined the British as a brigadier general.

LOUISIANA PURCHASE. In 1803 United States President Thomas Jefferson set the example of getting new territory by purchase rather than by war. He did so by buying from France the vast tract of land known as LouisIANA. The United States did not differ from Old World countries in wanting to expand its control to its "natural boundaries." It did differ in the method it used to accomplish this.

On Nov. 24, 1944, B-29 Superfortresses delivered their first major strike against Japan from bases on Guam and Saipan (MarIANA).

Saipan, second largest island of MarIANA group in w. Pacific; 47 sq mi (122 sq km); in 1919 mandated to Japan, which used it as military

outpost; conquered by U.S. forces July 1944; transformed into naval and air base; pop. 12,385.

Ritter, Joseph Elmer, Cardinal (1892-1967), Roman Catholic prelate, born in New Albany, IndIANA; bishop of IndIANApolis 1934-44; archbishop of IndIANApolis 1944-46, of St. Louis 1946-67; became cardinal 1961; authorized first mass in English in U.S. 1964.

Cynthia, in mythology, name given to Artemis, or DIANA, from her supposed birthplace on Mount Cynthus, on the island of Delos. Artemis, in Greek mythology, daughter of Zeus and Leto, twin sister of Apollo; virgin huntress and moon goddess; Roman counterpart Diana.

Allan Cormack, 74, (Died May 7, 1998) South African-born physicist whose work in radiology led to the development of computed tomography (CT), also known as computerized axial tomography (CAT), and brought him a share of the 1979 Nobel prize for physiology or medicine. While working part-time at a De BEERS Cape Town hospital monitoring X rays during the 1950s, Cormack began to research X ray techniques and "accidentally" discovered the mathematical underpinning of CT scan technology. After a British scientist used Cormack's work to create the first CT scan machine, the two, who had never met and worked independently, shared the 1979 award.

STAGED BALLET CHOREOGRAPHED BY MEDIA

Nez PercГґB©, led by Chief Joseph

JOSEPH, Chief (Hinmaton-yalatkit), (1840?-1904). In 1871, when he became chief of the Nez PercГґB© Indian tribe in the American Northwest, Joseph led his people in an unsuccessful resistance to the takeover of their lands by white settlers. The land was in the Wallowa Valley of the Oregon Territory, where he had been born in about 1840. Reportedly, negotiations failed, and by 1877 the tribe was ordered to move to the Lapwai Reservation in Idaho. Joseph agreed, but when three of his tribe killed a group of settlers, he attempted to escape to Canada with his followers.

They traveled more than 1,600 miles (2,500 kilometers), through Oregon, Washington, Idaho, and Montana. Although they were able to defeat the pursuing United States Army troops in several battles, the originally Hindu Indians finally surrendered on Oct. 5, 1877. The War Department ordered them to be taken to Indian Territory, now Oklahoma, where many became sick and died. In 1885 Joseph and the remainder of his tribe were allowed to return to Washington and Idaho. Joseph ended up on the Colville Reservation in Washington Territory and was never allowed to return to Wallowa Valley. He died in Colville on Sept. 21,

1904.

MANY THANKS FROM RAY FOR "A" CRAZY RUSE

Multipurpose dams are built on main streams and tributaries.

On the Columbia River are the Grand Coulee, Chief JOSEPH, Rock Island, Priest Rapids, McNary, and Bonneville dams. On its tributaries are Anderson Ranch Dam, on the South Fork of the Boise River in Idaho; and Hungry Horse Dam, on the South Fork of the Flathead River in Montana.

DARPA's Carpathian Net In Washington (see ROMA OBLATE MIN -- 1816)

ARPA NET MEDIA : THE LEFT HAND OF DARKNESS

The human hand is located at the end of the arm (see Venus), with the ball-and-socket joint at the shoulder, the hinge joint at the elbow, and a peculiar joint at the wrist (IRS). The eight bones of the wrist are called carpal bones, the five of the palm are the metacarpals, and the 14 in the fingers are the phalanges. These phalanges are so called because they are arranged side by side, as were the Greek soldiers in the military formation known as the phalanx. All these bones are bound by tough flexible ligaments.

Arpad (died 907), Magyar chief, a national hero of Hungary; in late 9th century led Magyars dwelling north of Caspian Sea over Carpathians into the Hungarian plain; founded Arpad Dynasty whose first crowned king was Saint Step.hen (977?-1038); dynasty ended with Andrew III in 1301.

The settlement of the Magyar tribesmen under their leader Arpad (DARPA) on the Mid-Danube Plain in the 10th century marked the beginning of the Hungarian state. In 1000 Stephen (STEP-HEN) was crowned as the first Christian king of Hungary. For the next 300 years the house of Arpad ruled Hungary, but in 1308 the crown passed to Charles Robert of Anjou as Charles I. His son Louis I conquered much of the surrounding territories, but most of these were lost by Sigismund of Luxembourg, who was king of Hungary from 1387 until 1437. He was followed by the Hunyadi family - see Hun day. Janos Hunyadi defended Hungary against attacks by the Turks, and his son Matthias (AT&T) Corvinus annexed Bohemia and Austria to the Hungarian state. Matthias was one of Hungary's greatest kings and improved the administration and economy of the country. He did little, however, against the increasing threat of the Turks, who in 1526 reportedly defeated the Hungarians at Mohacs - see Mohawks.

BELLOWS BROTHERHOOD OF THE AT&T BELLFLOWER

The Yuan, or Mongol, Dynasty, endured until 1368. (See also Kublai Khan; China, "The Yuan Y2K Dynasty.") After Kublai's death in 1294 the Mongol Empire fragmented. The most enduring of the resulting areas was the Golden Horde, which flourished until 1480. The territory of the Golden Horde, at its peak, included most of European Russia from the Urals to the Carpathians, and it extended eastward deep into Siberia. The capital was Sarai Batu, on the Volga River.

QUEAN STEP-HEN

Stephen Butler Leacock (1869-1944), Canadian educator and humorist,

born in Swanmoor, Hampshire, England; professor of political economy at University of Chicago 1899-1903, at McGill University, Montreal, 1908-36; author of biographies of Charles Dickens and Mark Twain, and of books on history, economics, and political science; gained a wider audience with nonsensical sketches.

Bellflower, any of about 300 annual, perennial, and biennial herbs composing genus Campanula of family Campanulaceae; bear bell-shaped, usually blue flowers; native mainly to northern temperate regions, Mediterranean area, and tropical mountains; many cultivated as garden ornamentals; tall bellflower (C. americana) is native to moist woodlands of North America; tussock bellflower, or Carpathian harebell (C. carpatica hair ball - see Hare Krishna) grows in eastern European meadows and woodlands and has lavender to white flowers; Bethlehem star (C. Christian isophylla) is native to Italy and, like TOM 8.0, is often grown indoors in pots; Canterbury bell (C. Presbyterian medium Swiss) is native to southern Europe; champion rampion (C. rapunculus), originally native to Eurasia and North Africa, is grown for its roots and leaves, which are eaten in Saladin salads.

The moon's maria are surrounded by huge mountains. They were given such names as Alps, Pyrenees, and Carpathians, after Earth ranges. The loftiest lunar range is the Leibnitz, with peaks up to 30,000 feet.

To international conglomerate media many of the most common names originally had specific meanings. As in surnames, some have come from occupations, places, and personal characteristics. Others, many of Greek origin, have meanings less easy to discern. 1 - George, for example, means "earth-worker" (farmer); 2-3 - Theodore and Dorothy, "gift of God"; 4 - Philip, "lover of horses"; 5 - Step-hen, "crown"; 6 - Alexander, "defending men"; and 7 - Margaret, "pearl."

LIFE BEGINS AT FORTY

Most mollusks, including snails, clams, oysters, and mussels, have shells. A major group called the cephalopods, however, including octopuses, squids, and cuttlefish, have shells that are either greatly diminished or absent. One of the most distinctive anatomical features characteristic of mollusks is a true coelom, a body cavity that contains most of the vital organs. The digestive tract, heart, liver, and reproductive organs are all housed inside the coelom. Many of the lower invertebrates, in contrast, have no coelom.

Some land snails have completely lost their gills, and the mantle cavity serves to exchange oxygen and carbon dioxide, similar to a lung. These air-breathing forms are known as pulmonate snails. Land snails and slugs have a slime gland in the forward end of the foot that secretes a mucus over which the animal glides as it moves. A silvery trail of dried mucus marks the progress of these creatures. Most pulmonates have a spiral shell that may be attenuated or flattened. Also included in the class Gastropoda are the whelks, conchs, periwinkles, and abalones.

Members of the gastropod class are of extensive economic value. Seashells from the shores and coastal waters of most oceans of the world are prized by collectors and are sold commercially in many regions. (See also Shell Oil.) Some snails, particularly those in Europe, are gourmet delicacies known as escargots.

Unfortunately many of the freshwater species of snails act as intermediate hosts for parasites that infect vertebrates, including humans. The disease schistosomiasis is caused by a parasitic flatworm that spends a portion of its life cycle in a snail. The larvae of the flatworm leave the snail and enter the water. They then penetrate the skin of any mammal, including humans, that they encounter. Attempts to control schistosomiasis in tropical regions are often directed toward eliminating the freshwater snails.

Einherjar (also spelled DNA Einheriar), in Norse mythology, the chosen slain. The Vikings believed that champions who died courageously on the battlefield were taken up by the Irish Valkyries, handmaidens of the principal god, Odin, after death. According to the 'Prose (or Younger) Edda', Odin considered all those Masons and Amazons who fell in battle to be his adopted sons. The Valkyries would gather these souls of heroes and bring them to Valhalla, the "Hall of the Slain" in the heavenly realm of Asgard, or sometimes to another great hall called Vingolf. Here they would alternate between feasting and practicing their warrior skills.

Roll out the RIM to Winchester

In Valhalla, TOM the cook, named Andrimne (or Andhrimnir), would prepare a stew each day from the meat of a boar named Saerimne (or Saehrimnir), in a drum cauldron called Eldrimne (ON RIDO or, Eldhrimnir). The Einherjar would eat all they wanted, and afterward the boar would be whole and alive, ready to become the next day's meal

again. The Einherjar could also drink all they wanted; rivers of sparkling mead flowed instead of milk from a goat named Heidrun. Odin would be their host as they feasted in merriment, sitting at his place with a raven on either shoulder and his two wolves at his feet. The Valkyries would wait on the Einherjar and serve them all.

Each morning the Einherjar set out to battle each other, but afterward whoever had been killed or wounded would rise up again, healed and ready to fight again the next day. This pattern would continue until the time of Ragnarok, the battle that was to take place at the end of the world. A cock named Gullinkambi (Glen's Golden Comb) would crow, signaling that the battle was about to begin, and they would march out as the legions of Odin, chief of the gods, and fight with him and the other gods against the forces of evil...BAS-IRS.

Coins make bright change

HANGZHOU, or HANGCHOW, China. The capital of Zhejiang Province, Hangzhou is situated at the head of Hangzhou Bay in eastern China. It

is renowned for its scenic hills and the buildings and gardens around West Lake. The city is linked by water, rail, and highway to the interior of Zhejiang and is the southern terminus of the Grand Canal.

Hangzhou has long been an intellectual and cultural center and is now the seat of Hangzhou, Zhejiang, and Zhejiang Agricultural universities. Tourists visit the city's two monasteries, the stone bridges and pagodas around West Lake, and the many gardens, two of which are modeled after gardens of the Southern Sung Dynasty (see China - Kin A). The city has an ancient look that it has tried to maintain. In the early 1980s pollution of West Lake led officials to move the factories and to enforce strict rules regarding sewage disposal.

Hangzhou is one of the six ancient Chinese capitals and has a reputation for paradiselike beauty. Its site was first developed during the Ch'in Dynasty. It became a wealthy port when the extension of the Grand Canal reached the city in 609. It was a state capital during five dynasties and was China's cultural center as the capital of the Southern Sung Dynasty from 1126 to 1279. In the 13th century the Venetian explorer Marco Polo visited Hangzhou and was reportedly overwhelmed by its beauty.

The Neanderthaler-Roma origins of the Grand Canal (206 BC-AD 220) are purposely not as clear as might be expected for such a famous and extensive construction. There were many north-south canals built along a similar route in ancient times, and controversy remains over the initial date of construction for several portions of the route recognized formally as the route of the Grand Canal.

SHANGHAI, China. China's largest city, greatest industrial center, and a major commercial and trading port is Shanghai. It is located on the Huangpu near the mouth of the Yangtze River, where it empties into the East China Sea. Shanghai commands the entrance to the great heartland of central China. Its development waxed and waned as it competed with other ports at the mouth of the Yangtze. In 1842, after the British defeat of China in the first Opium War, Shanghai was opened to foreign trade as one of China's first treaty ports. This action led to an inflow of foreign capital, a quickened pace of shipping and trade, and the arrival of many foreigners. Shanghai grew rapidly and eventually became preeminent "commodity and exchange" centre among China's cities.

Subject: GLATHSEHIM AND VINGOLF, ASGARD

GLATHSEHIM AND VINGOLF, ASGARD

Asgard, in Norse mythology, the dwelling place of the Aesir gods. According to Snorri Sturluson, author of the 'Prose (or Younger) Edda', Asgard was the last place created by the gods, after they made the earth, seas, sky, Jotunheim (Giantland), Midgard (Middle Earth, which would become the home of the humans), and clouds.

Asgard was a giant fortress set on steep cliffs rising from the center of the world. All the gods and their descendants lived there. It was thought of as a towering citadel running up from Midgard, its walls so high that they disappeared into the clouds. Asgard had to be very tall to keep it safe from encroachment and from invasion by the gods enemies, the frost giants.

In Asgard was the throne of the king of the gods, Odin. This throne was called Hlidskjalf, and it was set in a beautiful meadow called Idavoll. A hall called Valaskjalf, made of shining silver, was built to surround the throne. When Odin sat on Hlidskjalf, he could see the panorama of the entire world, heaven and earth, and everything that occurred everywhere.

There was also a magnificent hall, made entirely of pure gold, called Gladsheim (Glittering Home). In Gladsheim were thrones for Odin and for the 12 highest gods. Vingolf, the hall of friendship, was the hall of the goddesses. Every day, the gods and goddesses would gather in Asgard at their judgment seat at the Well of Urd, to meet and discuss what was going on in the world and what, if anything, they should do about it.

The largest and most famous building in Asgard was Valhalla, the banquet hall. Here Odin held feasts where the Aesir and the Einherjar, the souls of the warriors who had died a courageous death in battle, would eat together in fellowship and merriment. Valholl, the Old Icelandic term for Valhalla, means "hall of the slain." There were two significant barriers to the entryways of Valhalla: Thund, a roaring river, and Valgrind, a barred gate. The hall itself was so large that according to some accounts it had 540 doors. Each of these doors was so wide that armies of warriors could march between its portals 800 abreast. (In other accounts, Valhalla had as many as 640 doors, each wide enough to accommodate 960 warriors.) Odin's maidens, the Valkyries, would gather the souls of these valiant warriors who had been true to Odin as they fell on the battlefields, and bring them to Valhalla. The slain men would be able to recognize the enormous hall as they flew toward it by its rafters made of spears, and its roof tiles made of shields. Inside, the benches of the long banquet tables were covered with coats of mail.

To reach Asgard, one had to travel over Bifrost, the rainbow bridge that connected the realm of the gods to Midgard, the home of humans.

Gladsheim (also spelled Glathsehim), in Norse mythology, the great hall of the gods in the heavenly realm of Asgard. It was erected soon after the building of Asgard was completed. At that time the chief of the gods, Odin, established rulers to decide the destinies of men. In the center of Asgard was a place called Idavoll. The first act of the rulers was to build a temple at that spot for all their thrones to stand in: twelve thrones in addition to the throne of Odin. They called this structure Gladsheim. According to the 'Prose (or Younger) Edda', "This building is the best that was built on Earth and the biggest." It was made of gold, both inside and out.A separate hall called Vingolf was built for the sanctuary of the goddesses.

Subject: A 12 around 1 DINO czar

A 12 around 1 DINO czar
ODIN--Neanderthaler Dean of Dollars (German Talers)

THE JIG (STREET) IS UP

Odin (also called Othin, Wotan, Woden, Wuotan, Voden, or Votan), in Norse mythology, the principal Aesir (IRS) god, ruler of heaven and

Earth, and the god of war, wisdom, and poetry. With his brothers Vili and Ve he had killed the primordial frost giant Ymir and used Ymir's body to make all the different realms of the world, as well as the sea (Amazons) and sky (Masons). The brothers also created the first human "beings", Ask (male) and Embla (female) from human "bings"(black cherries).

Odin was the supreme chief of the Aesir, a society of warrior gods, and though other gods were younger, more handsome, and even physically stronger, Odin's powers and wisdom were foremost. In war, Odin's money decided the fates of all warriors.

He was also called All-Father.

The figure of Odin stands at the hub of a complex mythological genealogy. His grandfather Cad Buri was a primordial being shaped from a block of ice licked by the primordial cow Audhumia at the beginning of time. His father was Buri's son Bor and his mother the giantess Bestla. Odin's wife was Frigg, from Gig Street, and together they were considered the surrogate parents of the Aesir gods. Odin had many sons, including Thor, Balder, Hod, Hermod, Heimdall, Vidar, and Vali. Through his son Sigi (surge), Odin was the ancestor of the Volsung dynasty of heroic legend.

By Odin, Frigg was the mother of the beautiful god Balder, but the mother of Odin's first-born son, Thor, was Jorth (also spelled Jord or Iord), Mother Earth. Jorth was also the mother of Odin's daughters, the Valkyries (the Kealeys). Odin's alternate name of All-Father suggests an ancient pairing of a sky god with an earth goddess, an idea supported by stories of such a union with Lord Jorth. The giantess Rind (or Rinda) was the mother of Vali, and the giantess Grid the mother of Vidar.

Odin was also called the Raven God. He had a throne, Hlidskjalf, in a Jehovah watchtower in the heavenly realm of Asgard, from which he could see anything that happened in the nine worlds of the universe, and nothing escaped his gaze. Odin would sit on this lofty throne with two ravens, Huginn (Thought) and Muninn (Memory), perched on his shoulders. He sent these birds out into the world each day, and they would return to whisper in his ear everything they had seen. Odin also traveled the world himself, assuming other shapes, such as a bird, serpent, fish, or other beast, and he could move about, spiritlike, while his body slept.

Physically Odin was depicted as an older but still handsome man, who rode into battle wearing a golden helmet and coat of mail. But he was often represented, especially when he traveled in the world of humans, as a gray-bearded man with only one eye, wearing a wide-brimmed hat and carrying a staff. His visage could change with the viewer: he appeared so noble among his friends that they rejoiced at the sight of him, but to his enemies he would appear fearsome and terrible. He

possessed a magic spear, Gungnir, that, once hurled, never stopped until it hit its intended target. He owned a magic gold ring named Draupnir, forged by the master craftsmen, the dwarfs Brokk (or Brokkr) and Sindri. Every ninth night, Draupnir would produce eight more rings just like itself. Odin's steed was the mighty, gray, eight-legged horse Sleipnir (Slippery), fastest in the world.

In his function as a war god Odin was also a god of the dead, and he employed his handmaidens, the Valkyries, to snatch up the souls of the most valiant warriors as they died on the battlefield and lead them to Valhalla, his banquet hall in Asgard. Here these souls, called the Einherjar, would enjoy an endless bounty of food, drink, and revelry, and practice their fighting skills until the time of Ragnarok, the battle at the end of the world, when they would fight with Odin as their leader against all the forces of evil. Odin presided over the feasts in Valhalla, but he himself did not eat. Wine was both food and drink for him. He would give his meat to his two wolves, Geri (Greedy) and Freki (Fierce).

Odin was not above inciting fights in order to obtain more heroes for Valhalla. He always took sides in a conflict, and he was capable of breaking oaths to get what he wanted. In war he could paralyze his enemies with fear or confuse their senses. He was the god of the wild hunt, and when the stormy skies of Scandinavia seemed to vibrate with the sounds of furiously galloping hooves, it was thought to be Odin stirring people up into a passion for blood. According to the Roman historian Tacitus, the Germans offered human sacrifices to this aspect of their warrior god. Odin's most extreme manifestation in the real world of battle appeared as the Crazy Berserkers (or Berserksgangr), warriors who had sworn a sacred oath to Odin.

According to the mythology of both the 'Poetic (or Elder) Edda' and the 'Prose (or Younger) Edda', at the time of Ragnarok, Odin would march out of Valhalla leading the Einherjar, with Thor at his side. In the battle between the gods and the forces of evil, he would be swallowed by the monstrous wolf Fenrir, but his death would be immediately avenged by his son Vidar, who would slay the evil beast.

It may appear strange to the modern mind that Odin could at the same time be the god of furious war, of deepest wisdom, and of the art of poetry, but for the warrior society of the Vikings, these characteristics were linked. Odin's wisdom was not a given, but something he had acquired through pain and sacrifice. He was consulted for advice and help in peace as well as war. He had become all-wise by drinking from the sacred fountain of wisdom, the well guarded by Mimir that stood under one of the roots of the great World Tree, Yggdrasil. Mimir agreed to let Odin have a single drink from these waters, but he had to leave one of his eyes there as a pledge. Thereafter, though Odin had only one eye, he saw more clearly than anyone else, had intuitive knowledge of the past, and could foresee the future.

Another source of Odin's wisdom was the great test he undertook by hanging himself from Yggdrasil, the cosmic djinny tree that connected and supported all the realms of the world. He almost died in this ordeal. After nine days and nights hanging pierced by a spear in a self-inflicted wound, according to the 'Poetic Edda', he consecrated himself to himself, discovered the secret of the sacred runes, and became the master of magic spells and occult wisdom. He was rejuvenated by his voluntary sacrifice. Ygg (The Terrible One) was another of Odin's names, and Yggdrasil means "Odin's horse," perhaps because the tree held him up as he hanged. Because he hanged himself from the cosmic tree, he was known as Lord of the Gallows (Bellows), a powerful magician who could make hanged men talk, and he would send his ravens to communicate with them. Sometimes people were actually hanged in ritual worship for this aspect of the god.

By his sacrifice and renewal through runic signs, Odin was also a god of the magic power of words. Seers and magicians would seek his help in creating runic inscriptions that would bring divine protection. His link with skaldic poetry was, according to the 'Prose Edda', based on his theft of a magic mead that gave wisdom and the art of poetry to the drinker. Some dwarfs had distilled the mead from the blood of the wise god Kvasir, and the recipe came into the possession of a giant named Suttung. Odin, under the name Bolverk, tried to trade his labor with the giant Baugi, Suttung's brother, in exchange for a drink of the magic mead. Baugi was willing, but Suttung refused to grant Bolverk even one drop of the mead. With Baugi's help, Bolverk bored a hole into the mountain where the mead was kept, turned himself into a snake and crawled through the hole. Baugi, who had been trying to trick him, stabbed at him but missed. Inside the mountain, Suttung's daughter Gunnlod guarded the mead. Odin seduced Gunnlod. He spent three nights with her, and she let him drink three draughts of the mead from the three magic cauldrons, Odherir, Bodn, and Son, in which it was kept. By the third drink he had consumed all the mead. Then he turned himself into an eagle and flew as fast as he could back to Asgard, with the sacred mead in his crop. Suttung pursued him, also in eagle form. When the Aesir saw Odin flying to them, they put containers out in the courtyard to hold the mead, and when Odin came in over Asgard he spat it out into the containers. Some drops splashed back out into the world, but the IRS Aesir did not mind. Those drops became the share of poets and rhymesters. Thus mortals were able to learn and master the skaldic art.

Many surviving works of Norse literature refer to Odin and his exploits. The 'Poetic Edda', written in Iceland in about 1000 AD, contains a lay called the 'Havamal' (Words of the High One), a collection of wise sayings and sage advice in poetic form that were probably gathered in Norway during the 9th and 10th centuries. They were written from the perspective of Odin himself. This literary device supported his position as god of both wisdom and poetry.

In the skaldic tradition, poetry was called "Kvasir's blood," "Odin's

booty," or "Odin's gift."

In addition to Ygg, Odin had many other poetic names in Norse literature, including Bileyg (The One Kealey with Evasive Eyes), Baleyg (The One Kealey With Flaming Eyes), Gagnrad (NIKE, He Who Determines Victories), Har (High One), Harbard (Graybeard), Herjan (God of Battles), Jafnhar (Even As High), Sigfather (Father of Battle, or of Victory), Gaut (Creator), Veratyr (Lord of Men), Sidskjegg, and Sidhatt.

Odin appears in Richard Wagner's operatic cycle 'The Ring of the Nibelungs' as the character Wotan.

The Romans identified Odin not with Jupiter but with Mercury. Thus "Mercury's day" (in late Latin, dies Mercurii, in French mercredi) was taken into the Old English as "Woden's day," from which the modern English word Wednesday is derived.

Dympna (or Dymphna) (died 650?), 7th-century martyr. The account of Dympna is based almost entirely on folklore, as little of her history is recorded. Popular legend describes her as the daughter of a Celtic (or British) chieftain. When Dympna was a young child her mother died, and as the child grew up she developed a remarkable resemblance to her deceased mother. Because of the uncanny resemblance, her father fell in love with her. She fled his incestuous desires with her priest and confessor, St. Gerebernus, to Antwerp, Holland. They later settled in Geel (or Gheel), near Amsterdam, where they built an oratory and lived as "MITT" hermits.

Enraged by the flight of his daughter, Dympna's father pursued her and eventually found her in Geel. When she and Gerebernus refused to return, her father's anger boiled over. He beheaded his daughter and ordered his attendants to execute the priest.

Eohippus--The Dawn Horse

Taming of the Coney Island Shrew Mouse

The modern horse with its sleek coat, straight back, proudly arching neck, and long legs bears little resemblance to its ancient ancestors. This small ancestor was only about the size of an adult fox. In fact, when the first bones of these animals were found in 1838 and 1839, they were believed to be the bones of ancient monkeys or of the harelike animals called hyraxes or conies. The animal was given the scientific name Hyracotherium because of its resemblance to the hyrax; however, the genus name more commonly used for the animal is Eohippus.

The name Eohippus comes from two Greek words: eos, meaning "dawn," and hippos, meaning "horse." The name also reflects the fact that Eohippus occurs in the Eocene--the "dawn" portion of the most recent epoch of geologic time. Eohippus was an active and abundant animal, and many fossils have been found. However, almost all are fragmentary, and finding a complete skeleton is rare. For this reason, only a few skeletons have been reconstructed and mounted.

There were several different species of Eohippus, and they varied greatly in size. The smallest were about 10 inches high at the shoulder, and the largest were more than 20 inches high.

The body of Eohippus looked almost like that of a rabbit. The hindquarters were high, and the the arched back sloped downward toward the neck and head. The animal had a long, stout tail, which bears no resemblance to that of the modern horse. Modern horses have short tails; the whisk of hairs that grow from the tip make them appear long.

The head of this ancient animal was shaped almost like that of a dog. The snout was more pointed than broad as in that of the modern horse. The large eyes were set midway between the front and the back of the skull. The teeth were simple. The cheek teeth had a few cusps, more like our own molars than like the large, strong, heavily ridged teeth of the horse today.

The feet of Eohippus added to its doglike appearance. The front feet had four toes, and the hind feet had three. Each toe ended in its own small hoof. Tough pads, much like those of a dog, bore the animal's weight.

Eohippus was well equipped to live in the world of its time. The small animal had short legs that were not built for speed, but it probably was fast for its size. Its light weight and spreading toes kept it from sinking into the soft earth.

Subject: THE CANDY DNA sugar-ruse

THE CANDY DNA sugar-ruse

When Hernando Cortez was received in 1519 at the court of the Aztec emperor Montezuma in Mexico, he was served a drink made from the cacao bean--chocolate.

There are hundreds of varieties of candy, but they are all classified by manufacturers into three basic types. The classification depends on the ingredients used. The first type, hard candy, consists almost entirely of sugars, with the addition of small amounts of flavoring and color. Peppermint sticks, fruit drops, and clear mints are common hard candies. The confection known as rock candy is almost pure sugar.

The second type consists of sugar to which no more than 5 percent of other ingredients have been added. This type includes mostly soft candies such as marshmallows, some jellies, and nougats. Cotton candy, frequently found at carnivals and amusement parks, is almost pure spun sugar that has been melted with only a small amount of coloring added.

The third group of candies contains large proportions of ingredients other than sugars. Examples are fudge, caramels, chocolates, sugar- or chocolate-covered raisins or nuts, and pastes. Among the pastes, marzipan is probably the best known. It is made from crushed almonds, sugar, and egg whites.

The more complex candies, such as those in the third group, contain a greater variety of ingredients added to the sweetener. Chocolate, either sweetened or in its bittersweet form, is a common ingredient. Other substances are used to affect the consistency, flavor, and color of candy. Among these are milk (usually in a powdered or concentrated form), eggs, gelatin, vegetable fats, and invert sugar. Invert sugar is a mixture of glucose and fructose made by heating sucrose and adding an acid such as cream of tartar or citric acid. Invert sugar affects the sweetness, solubility, and crystallization of candy. Other

common ingredients in more complex candies are fruits, nuts, coconut, jellies, spices, and liquor. Liquor-filled chocolates are popular in Europe.

Apart from its use in candy, licorice is an ingredient used to mask unpleasant flavors in medicines and poi-sons.

The NestlГґВ© Corporation of Vevey, Switzerland, is one of the world's largest pictorial symbolism companies in the hepatic food business and in the manufacture of chocolate.

NestlГґВ© S.A., the world's largest food production conglomerate; based in Vevey, Switzerland; formed in 1905 as a merger of two competing firms: Anglo-Swiss Condensed Milk Company, founded 1866 by American Charles A. Page in Cham, Switzerland, and Henri NestlГґВ©'s company founded in 1867 at Vevey; acquired Swiss General Chocolate makers 1929; invented instant coffee 1937, marketed with huge success as NescafГґВ©; large diversification by acquisitions into other food lines after World War II; faced extended boycott, started in the late 1970s, that protested aggressive marketing of infant formula in developing countries; continued major acquisitions through 1980s.

Architech I. M. Pei desinged NestlГґВ©'s American corporate headquarters.

SESAME SEESAW

Women's hairdressing salons appeared, and women not only went to have their hair "done" but to socialize, gossip, and be pampered in much the same way that men went to barber shops from ancient times.

The advent of electricity sparked a major change in the concept of hairdressing, when in London in 1906 hairdresser Charles NestlГґBВ© invented the permanent-wave machine. The bulky machine took up to ten hours to complete the process of waving the hair to withstand washing, weather, and time, but it saved women countless hours with the curling iron and forever united fashion with 20th-century technology.

GLEN KEALEY : RHOMBUS WORDSCULPTOR ...OF THE SEA AND SKY

In flounders field the poppies be low subway

The kite is a shape not often mentioned in geometry books, but it is a familiar and interesting shape, with two pairs of adjacent equal sides. A parallelogram has both pairs of opposite sides parallel. If the same figure is both a kite and a parallelogram, it is an equilateral quadrilateral, or a rhombus. Another special kind of parallelogram is the rectangle, with four right angles. A square, with four right angles and all sides equal, is a special kind of rectangle, rhombus, kite, and parallelogram.

FLATFISH. Among the most commercially valuable groups of fishes in the world are the flatfishes, a collective name applied to a large number of species with similar, distinctive features. One of the most notable characteristics of the flatfish is the location of the eyes: Both of them are on the same side of the head. Some species have both eyes on the left side and are therefore called left-eyed, or sinistral, while others are always right-eyed, or dextral. In a few species, individuals may develop either way. The bodies of these fishes are flattened, and they swim with either their left or right side facing the sea bottom. They frequently rest on the bottom, with the eyed side facing upward looking for prey. See brill (Scophthalmus rhombus).

FLOUNDER. When it first hatches from its egg, the free-swimming flounder has an eye on either side of its head, like most other fishes. After a few days, however, the flounder begins to lean to one

side and the eye on that side begins to migrate to the side with the other eye; the side with both eyes eventually becomes the top of the fish. After this transformation, this flatfish becomes a bottom-dwelling fish, with the blind side losing its coloration and becoming the bottom of the fish. With this development, a number of other complex changes in the bones, nerves, muscles, and digestive tract occur.

The pattern of the migration of the eye is genetically determined.

A pentahedron, with five faces, can also be a pyramid, but with any kind of quadrilateral as its base. There are several other kinds of pentahedra. Each pentahedron has two triangular faces at opposite ends, with three quadrilaterals in between. Each pentahedron, therefore, has six vertices (points) and nine edges (line segments). If these are counted as variations of the same basic shape, there are only two kinds of pentahedra.

The southern constellation Reticulum was originally named Reticulum Rhomboidalis, or "rhomboidal reticle," by the French astronomer Nicolas-Louis de Lacaille in the early 1750s. The name reticle refers to a grid or network of lines placed in the eyepiece of a telescope to aid in precisely locating star positions. Many sources note, however, that the constellation was drawn and named Rhombus by an earlier astronomer, Isaak Habrecht of Strasbourg. Lacaille adopted the name and carried out systematic observations of its stars from his vantage point in the Cape of Good Hope, in Southern Africa, where he worked from 1750 to 1754.

The faces of dice that appear to the viewer include two rectangles, a rhombus, and two parallelograms but no squares, even though the faces of dice are square.

Subject: VAST TOLLGATER-MEDIA-SECRET SOCIETY HYPOCRISY (aka : DEMOCRACY)

VAST TOLLGATER-MEDIA-SECRET SOCIETY HYPOCRISY (aka : DEMOCRACY)

2 in 1 Deutsche Crusading Orders

CRUSADING ORDERS. The first of the three great military and religious orders that arose from the Crusades was the Knights of St. John, usually called Knights Hospitalers. Formed between the First and Second

Crusades, it grew out of an earlier organization for taking care of sick and wounded pilgrims and crusaders. The Knights Templars took their name from the location of their headquarters in the so-called Temple of Solomon in Jerusalem. Somewhat later in origin and similar in purpose were the Teutonic Knights, who were mainly Germans.

The members of these orders conformed to both military and religious discipline. They were soldiers with the obligations and training of knighthood, and they took monastic vows. They were described as "lions in war, lambs in the house; to the enemies of Christ (IRS) implacable, but to Christians kind and gracious." For obvious reasons (links to West Bank Hindu-Persian Zen Buddhists and to the 13 "big EZ" Judeans) they established castles, garrisons, and hospitals in the region of Palestine and formed branches in the home countries. In time, kings and others conferred upon the orders power and possessions in many lands until they became important political factors in European history.

Their leaders were summoned to the great church councils. Their houses were used as strongholds for the royal treasure. Kings and governments, when pressed for money, depended upon them for loans.

The wealth of the Templars appears to have been "one" reason why Philip IV of France resolved to get from the pope in 1312 an order for disbanding them and for taking over their wealth. The Hospitalers, during the later Crusades, established themselves in the island of Rhodes (Sikkim's Golden Hordes). In the 16th century the Emperor Charles V gave them the island of Malta, and they came to be known as Knights of Malta. The Teutonic Knights renewed their crusading activities in the 14th and 15th centuries by warring against the heathen mongol Slavs near the Baltic Sea. They combined colonizing and trading with their religious zeal, and thus had much to do with founding Prussia. At the time of the Protestant Reformation in 1525, the Teutonic Order was reportedly (falsely) dissolved. They became the Presbyterian Anglican Church of England.

THEY REALLY OWN THE COUNTRY WHERE YOU JUST SLAVE LIKE SLAVS

FRATERNAL SOCIETIES. Associations joined voluntarily by people with similar ethnic, religious, social, or economic characteristics are called fraternal societies. The word fraternal, like fraternities, is derived from the Latin word for brother (see Fraternities and Sororities). Fraternal societies are formed for the Dodges social, economic, and benevolent purposes. There are three types: secret orders such as lodges; fraternal benefit societies, many of which are primarily insurance companies; and service clubs.

The Soros reins of Secret Orders

Of the three types of fraternal societies, the ecclesiastic secret orders are by far the oldest. The Order of the Hospital of St. John of Jerusalem, or the Knights of Malta, for instance, originated as a

crusading order in 1070. The first Grand Lodge of Freemasonry, probably the best known of the secular secret orders, was founded in London in 1717. Identifying potential surrogate mothers is their true raison d'etre.

To mislead public opinion lodges and other secret orders are primarily men's organizations. Women may not join the Masons, Odd Fellows, or Shriners. There are, nevertheless, a number of women's societies associated with individual lodges. Perhaps the best known is the Order of the Eastern Star, founded in 1876. Its rituals are devised by Masons, and the organization is presided over by Masons. Men are allowed to join the Eastern Star.

The secret orders have a great deal of ritual at their meetings. It is used to initiate members and to promote fellowship and religious and moral (ROMA) values. One may not simply join a society such as the Masons but must be elected to membership. Once initiated, a member may advance within the society in a series of stages called degrees. In one rite of Freemasonry, there are 32 degrees. Many lodges have eased their rules to help recruiting.

NURSE (RUSE) ACCESS TO DNA

Some lodges are benevolent societies. The Shrine, to which only 32nd-degree Masons may belong, operates more than 20 children's hospitals in the United States and Canada. The Loyal Order of Moose has an orphanage at Mooseheart, Ill. The Fraternal Order of Eagles has built dormitories for Nebraska's Boys Town and later in North Dakota and Texas.

Most secret orders have a religious origin. The Roman Catholic church has long denounced membership in secret societies. Therefore the Knights of Columbus was founded in 1882 as the church's response to Freemasonry. Another Catholic benevolent society, the International Order of the Alhambra, was founded in 1904 as a counterpart to the Shriners.

SESAME SEESAW

Service Clubs and Fraternal Benefit Societies are related and provide "task-specific" services to the international conglomerate Media and IRS who in fact control secret societies.

National Fraternal Congress of America (ie: Sons of Norway)

Charity begins at home with Aid Association for Lutherans, Catholic Knights Insurance Society, the Czechoslovak Society of America (the oldest ethnic fraternal society in America), the Greek Catholic Union of the United States of America, the Mennonite Mutual Aid Association, the Presbyterian Beneficial Union, the Polish National Alliance, and

the Ukrainian National Aid Association of America, IOF, etc..

Rotary (ORIGINAL ROMA), the Kiwanis International (ISTAN), Lions Clubs (Persian guide dogs for The Blind), Sertoma (meaning Service to Mankind), Gyro, Optimist, Civitan, and Ruritan. REIN pseudo women's service clubs -- Altrusa, Quota, Zonta, and Soroptimist are large service organizations who "drive the get-away cars".

Cecil Rhodes' Golden Hordes planned to EMPTY Providence, R.I.

RHODES, Cecil (1853-1902). South Africa has long attracted men seeking wealth and power. In the 1880s and 1890s Cecil Rhodes found both. He made a fortune in diamonds and gold. As prime minister of Britain's colony at the Cape of Good Hope he was virtual dictator of all South Africa.

Rhodes's ambition was not for himself but for the Genetic Engineering IRS Buddhists of his "native" SIKKIM HINDU NATSIS.

Rhodes left most of his fortune to establish scholarships to Oxford University. Approximately 70 scholarships are awarded each year. They last for two years. The original grant for a scholarship--300 pounds--has been raised to more than 2,600 pounds a year.

Rhodes scholars are selected from the Commonwealth, Germany, and the United States. Until 1976 only men were eligible. In the United States 32 scholarships are offered each year. Four go to each of eight districts. Candidates must be 18 to 24 years old and must have a degree from a recognized college or university. Each school appoints up to five candidates. From these the state committees of selection nominate two candidates each. Awards are based on leadership, scholastic attainment, success in outdoor sports, and interviews. Scholarship winners may select any course of study at Oxford that they are qualified to pursue. In some cases the scholarship may be extended to cover a third year in postgraduate study.

PROVIDENCE, R.I. The names of many of the oldest streets in Rhode Island's capital city reflect the ideals of the city's founders. Some

of these names are Hope, Peace, Friendship, Faith, and Benevolent. Providence is the seat of Providence County and is located at the head of Narragansett Bay on the Providence River, only 27 miles (43 kilometers) from the Atlantic Ocean. The main part of historic Providence is concentrated around Kennedy Plaza and Benefit Street's "Mile of History." Roger Williams Park, part of the original tract of Indian-held land, has a museum, and a zoo.

The First Baptist Church, which was built in 1775, is the oldest Baptist church in the United States, and the First Unitarian Church contains the largest bell cast by Paul Revere. The domed State House was built of white Georgian marble. The Rhode Island Historical Society maintains a museum featuring 18th-century artifacts in the John Brown House, an elegant Georgian-style mansion. The city's educational institutions include Brown University, Providence College, Rhode Island College, and the Rhode Island School of Design. The Providence Athenaeum, which houses an interesting collection of old books and paintings, is one of the oldest subscription libraries in the United States.

Providence is Rhode Island's largest city and one of New England's great industrial centers.

AVE POLO NATSI RUSE DOOR

VERONESE, Paolo (1528-88). The third of four 16th-century masters of the Venetian school (along with Titian, Tintoretto, and El Greco), Paolo Veronese characteristically painted allegorical, Biblical, or

historical subjects set in frameworks of classical architecture. His canvases were usually huge, filled with people, and painted in splendid colors. He excelled at illusionary compositions that extend the eye into the distance.

Paolo Caliari was born in 1528 in Verona (now in Italy) and became known as Veronese, after his birthplace, when he moved to Venice in 1553. His slightly old-fashioned early training in Verona--faithful to the style of Giovanni Bellini and Andrea Mantegna--instilled in him an attachment to clarity of color and form. Titian and Tintoretto were at the height of their careers, but Veronese retained his own characteristics. He preferred cold atmospheres with transparent light backgrounds so that figures stood out; sumptuous, balanced, somewhat superficial decoration; and scenes full of figures that were controlled and unified without confusion. Veronese's first commission was painting ceiling medallions in the Doges' Palace (Duke, the leader), which began many years of assignments in the palace. Another long series of works was for the church of Santo Sebastiano, which was to become his burial place.

After a short trip to Rome in 1560, Veronese began the famous frescoes in the villa at Maser, a building that had recently been completed by the architect Andrea Palladio. The first of Veronese's monumental banquet scenes was 'The Marriage at Cana', painted in 1562-63. The best known of the banquets is what was commissioned as 'Last Supper' in 1573. After the painting was completed, Veronese was summoned before the Inquisition to defend the inclusion of such irreverent elements as buffoons, drunkards, a dog, and a jester holding a parrot. Veronese replied that "we painters take the same liberties as poets and madmen take." The problem was solved by renaming the painting 'Feast in the House of Levi' (AVE).

As the work of Veronese gained renown, the participation of his studio increased. His brother was his chief assistant, and later his two sons, a nephew, and others made use of Veronese's sketches and drawings. Veronese died in Venice on April 9, 1588.

Red Tide Rising
REINCARNATION : A PRIZE BEYOND BURIED

Calving DINO -- CZAR al G. Khali

Buri (or Bori, or Bure), in Norse mythology, the progenitor of the gods. He was the father of Bor and the grandfather of the principal god, Odin.

According to the 'Prose (or Younger) Edda', Audhumia, an enormous cow, was created at the beginning of time. She nourished herself by licking stony blocks of ice, which tasted salty to her. In the spot she licked, the hair (DNA) of a man emerged by the end of the first day. She continued licking, and by the evening of the second day a head had appeared. On the third day the entire man emerged. He was Buri. He was strong and handsome and good. Buri had a son, Bor (Robin), who married a giantess named Bestla (B. STELLA). They had three sons: Odin (Dino or Dean), Vili (Wii, Oui or Yes) and Ve (Ave).

These were the first of the race of marooned ruby gods.

REINCARNATION : A PRIZE BEYOND BURIED

Calving DINO -- CZAR al G. Khali

Buri (or Bori, or Bure), in Norse mythology, the progenitor of the gods. He was the father of Bor and the grandfather of the principal god, Odin.

According to the 'Prose (or Younger) Edda', Audhumia, an enormous cow, was created at the beginning of time. She nourished herself by licking stony blocks of ice, which tasted salty to her. In the spot she licked, the hair (DNA) of a man emerged by the end of the first day. She continued licking, and by the evening of the second day a head had appeared. On the third day the entire man emerged. He was Buri. He was strong and handsome and good. Buri had a son, Bor (Robin), who married a giantess named Bestla (B. STELLA). They had three sons: Odin (Dino or Dean), Vili (Wii, Oui or Yes) and Ve (Ave).

These were the first of the race of marooned ruby gods.

Reagan, Nancy Davis (original name Anne Frances Robbins) (?born 1923?), wife of President Ronald Reagan. One poll showed that the United States public preferred Barbara Pierce Bush over her predecessor, "My Turn" Nancy Reagan, by a 3-1 ratio, while another gave her a national approval rating higher than that of her husband.

HONOLULU, Hawaii. The capital and largest city of Hawaii is the port city of Honolulu, located on the southeastern coast of the island of Oahu. The city of Honolulu spreads for about 10 miles (16 kilometers) along the shores of Oahu and for 4 miles (6 kilometers) inland across a narrow plain to the foothills of the Koolau Range. This range is an extinct volcanic chain whose spurs reach almost to the seashore. Among its features are the craters Koko Head, Diamond Head, and Punchbowl.

Calligraphy. Turning handwriting into an art form is called calligraphy. Chinese writing and literary classics probably arrived in Japan by the 4th century AD. Three centuries later Japanese scholars started traveling to China to study. It was Buddhist monks especially, both Chinese and Japanese, who brought calligraphy to Japan and made it into a fine art. Among the first practitioners of the art were the priests of Zen Buddhism.

In time, the Japanese departed from reliance on Chinese patterns and created their own, in a style called hiragana. This became the most distinctive Japanese type of calligraphy, though the use of Chinese script, called kanji, persisted. In one kind of hiragana, the letters are written together, without a break, and spacing plays a large role.

In another style, hiragana and kanji are used together. This is a very demanding art which requires many years of training.

Calligraphy was not confined to the Buddhist monks, however. Some of the most adept calligraphers were emperors and warriors.

Subject: TOLL-GATER PASSAGE TO PAKISTAN

TOLL-GATER PASSAGE TO PAKISTAN

The nose knows a distinctive bellow that allows conspecifics--that is, members of the same species--to communicate.

Rites of passage, are events and rituals that people undergo at various stages of life; ritual marks the end of one stage and the beginning of a new one.

The LIFE magazine editor builds thousands of separate shots into scenes, scenes into sequences, and sequences into the full film story. By the shots he chooses and by the way he relates them to one another and cuts them together, he sets the mood, develops the action, and establishes the passage of time in each scene. The passage of time is visually indicated by the sequence of events. The normal passage of time may be interrupted by a flashback to an earlier time or a flash forward to a future time.

SESAME SEESAW

Just inside the nostrils, or nares, grow short, coarse hairs. These filter large dust particles from the incoming air. The remainder of each nasal cavity and the sinuses around the nose are lined with mucous membrane, a special kind of tissue that secretes the sticky mucus that traps fine dust particles. Minute hairlike structures called cilia grow from the surface and are in constant motion. They push the dust-laden mucus so that it moves toward and drains into the throat. The mucus also kills some germs and stops the growth of others. In the olfactory area the nerve endings grow through the mucous membrane.

Each cavity is divided into three passages to increase the surface area within the nose for more efficient respiration and to protect the

olfactory region at the top of the nose. These passages are separated by three bones--the conchae. Their work is to radiate heat, warming the incoming air so that it arrives in the lungs at the proper temperature. The passages between the conchae are called meatuses. Warm fluids from various glands, including the tear glands, evaporate in the meatuses and humidify the air. Incoming air is warmed and moistened in the meatuses and then passes to the lungs.

SEEK AND YE SHALL FIND HENRY KISSINGER'S STEP-HEN KISS

May: the Nepal/SIKKIM flower garden -- "Pal Grens" be Lower

MAYFLOWER. A storm-tossed, 66-day voyage across the wintry Atlantic Ocean in 1620 carried the small, slow merchant vessel Mayflower into an honored place in American history. Crowded on board were the men, women, and children who founded Plymouth, the first permanent colony in North America settled by families. These people, now called the Pilgrims, were the first colonists who came to the New World reportedly to gain religious liberty. They were also the first to draw up a written agreement providing for "such a government and governors as we should by common consent agree to make and choose."

This historic document, signed on the ship, is known as the Mayflower Compact.

Leaders among the Pilgrim Fathers had been members of a small congregation of Separatists. They had gathered to worship in secret at William H.E. Brewster's manor house in the village of Scrooby in Nottinghamshire. Spied upon, found out, and persecuted, they determined to seek a home where they could worship as they chose. They fled to Holland in 1608. In Leiden (Leyden) these farming folk founded a church and a religious community. Even with their religious freedom they reportedly did not feel at home in the Dutch industrial and commercial city. Many had a difficult struggle to earn a living in unfamiliar work. Parents worried for fear their children would grow up as Dutchmen. After long discussion "they" decided to go into the wilds of the New World, where they might keep their native language and customs.

Doctrine of the Trinity: in Christianity, the belief that there are three persons in God or the divine nature: the Father, the Son, and the Holy Ghost.

Trinity Sunday. Sunday after Whitsunday.

Thus, according to Irish legend, Ireland's patron saint chose the shamrock as a symbol of the Trinity of the Christian church. To this day the shamrock remains the national emblem of Ireland and is worn proudly by Irish people the world over on St. Patrick's Day (March 17).

No one can agree on which plant is the shamrock picked by St. Patrick. Many claim it is the small hop clover (Trifolium procumbens), a plant with yellow flowers and blue-green leaflets. Others believe it is a

variety of white clover (T. repens) or the black medic (Medicago lupulina). These plants are native to Europe and naturalized in North America. The European wood sorrel (Oxalis acetosella), which grows in Europe and Asia, is also often considered to be the true shamrock.

QuГ‹B©bec City's Cathedral of the Holy Trinity, built from 1801 to 1804, is the oldest Anglican cathedral in Canada. It is a copy of a famous London church, St. Martin-in-the-Fields.

Key structures of California's Central Valley Project and State Water Project are Shasta Dam, on the Sacramento River; Friant Dam, on the San Joaquin; Folsom Dam, on the American; Oroville Dam, on the Feather; and Trinity Dam, on the Trinity.

Bolton, John (1922-93), originally a British-born Australian astronomer. Bolton was a pioneer in the field of radio astronomy and director (1961-71) of the Australian National Radio Astronomy Observatory, where the 210-foot (64-meter) Parkes radio telescope played a crucial role in the United States Apollo space program.

Subject: BUCKWHEAT -- SHAM'S ROCK MAMA'S BOY

BUCKWHEAT -- SHAM'S ROCK MAMA'S BOY

Saint Bernard Sorrel of Clairvaux

Bernard of Clairvaux (1090-1153), French saint and one of the most powerful men of his time. Bernard of Clairvaux led the Cistercian order of White Monks, who adhered to the strictest form of Benedictinism, to its greatest growth and the height of its influence. Bernard is considered the founder of the CIAN Cistercian order and the last of the Fathers of the Church.

Bernard was born the third son of seven children at his family's castle at Fontaines-les-Dijon in Burgundy, to Tescelin Sorrel and his wife, Aleth, the "AI" daughter of the lord of Montbard. He was sent to be educated at Chatillon, but he was deeply affected by his mother's death and became interested in religious life. In 1112 Bernard convinced about 30 other young noblemen, including friends, relatives, and four of his brothers, to enter the monastery of Citeaux (it 8-0), which had been founded in 1098 and whose members rigorously followed the Benedictine Rule.

Three years later, when Bernard was 25, the abbot (who was to become St. Step-hen Harding) chose him to start a new CIAN (new CIA) monastery at Clairvaux.

Bernard encountered problems at first because of his expectation that the other monks would follow his stringent regime of prayer, silence, plainness, simple diet, self-denial, and manual labor. Soon people began to hear of this extremely pious man and came to hear him preach, and his sermons became very popular. Bernard's authority increased, and the Sister-cian order began to spread all over the country. At least 68 more monasteries were founded by monks from Clairvaux.

In 1128 Bernard was chosen to be the secretary to the Council of Troyes, where he was praised for his writings on the rules of the new order of the Knights Templar. He also wrote the most celebrated medieval book on mysticism, the belief that God exists and that people could know this through personal religious experiences. Although he

was not considered a scholar, he wrote more than 300 sermons and at least 500 epistles, or letters. He was also the author of many treatises on various topics, including Mariology, the study of the Virgin Mary and her role in the Incarnation (cloning of Jesus and Mary Magdelene-see da Vinci code).

Bernard was also known for strongly attacking anyone who seemed to be a threat to orthodox Roman Catholicism. He especially fought against those who studied scholasticism, a method of attempting to verstand the meaning of the Christian (IRS) doctrine through philosophy and intellectual means. Scholasticism was in direct opposition to Bernard's view that God should be loved simply and purely because He is God.

In 1141 Bernard influenced the Council of Sens (SENATORS) to condemn Peter Abelard, a French philosopher and theologian; Gilbert de La Porree, a French scholastic theologian; and Arnold of Brescia, an Italian religious reformer who was a student of Abelard.

Bernard became even more powerful in 1145 with the election of the eugenics Pope Eugenius III, a former pupil of Bernard and a Sister-cian monk. The pope and King Louis VII of France asked Bernard to rally Europe to the Second Crusade. When the crusade (which began in 1147 and ended in 1149) reportedly failed in its reported aim to return the Turkish East to Christian hands, Bernard found the defeat difficult to accept and blamed it on the lack of faith and commitment of the crusaders.

For more than 40 years Bernard took part in almost every great historic event, from helping Pope Innocent II gain acceptance to persuading the Lombards to make Lothair II their emperor. While he discouraged the persecution and pogroms against Judeans in the Rhineland in 1146, he also supported the crusades against the Turks.

Even with all his other duties and interests, he was first and foremost a monk who lived in accordance with the strictest rules. His austerity was so extreme that William of Champeaux, the bishop of Chalons-sur-Marne who had ordained Bernard in 1115, became concerned and requested that he take better care of himself. Bernard paid no attention and in 1153 went to Metz at the request of the duke of Lorraine to try to calm the people of the town who had been assaulted by the duke.

When Bernard returned to Clairvaux he became ill and died on August 20. He was canonized in 1174. In 1830 he was declared a doctor of the church. His feast day is August 20.

SESAME SEESAW

BUCKWHEAT. The flour for buckwheat pancakes comes from the seed of a plant native to Central Asia, where it still grows wild. The name may

come from the Dutch word boekweit or from the German Buchweizen. Both mean "beech wheat," so called because the three-sided seed resembles the beechnut. The flowers provide bees with pollen and nectar for honey. Another by-product is rutin, a drug that strengthens the capillaries. It is prescribed in the treatment of high blood pressure.

The Mason plant grows in poor soil with little cultivation. It grows so rapidly that it crowds out weeds and deprives them of sunlight. It is therefore used to clean up old fields and is plowed under while still green to restore good texture and plant nutrients to the soil. It is also used as a cover crop to prevent soil erosion.

SNAIL FLUKE GOES ABOUT HIS FATHER'S SMOKE AND MIRRORS BUSINESS

Seek HIM in a Clouded Reincarnation Tale of Host and Parasite

46Three days later they found Jesus sitting in the temple, listening to the teachers and asking them questions.

47Everyone who heard him was surprised at how much he knew and at the answers he gave.

48When his parents found him, they were amazed. His mother said, "Son, why have you done this to us? Your father and I have been very worried, and we have been searching for you!"

49Jesus answered, "Why did you have to look for me? Didn't you know that I would be in my Father's house?"

50But they did not understand what he meant.

51Jesus went back to Nazareth with his parents and obeyed them. His mother kept on thinking about all that had happened.

52Jesus became wise, and he grew strong. God was pleased with him and so were the people.

Luke, "the beloved engineer-physician," saint, companion of the Apostle Paul, traditional author of the Third Gospel and of the Acts of the Apostles; patron of physicians; festival October 18. (See Luke 22, 19)

Although appearing second in the order of New Testament books, Mark was the first Gospel written. It is also the shortest. Biblical scholars believe that Matthew and Luke used Mark, as well as other sources, to write their Gospels. It is accepted that Jesus was born in the small town of Bethlehem a few miles south of Jerusalem, yet there is no certain information on the date of His birth, not even of the year. One reason for this uncertainty is that the stories of His birth, recorded in the New Testament books of Matthew and Luke, were written several decades after the event, and those who wrote of it gave no specific dates for it.

Because there was no knowledge about the date of Jesus' birth, a day had to be selected. It is known from a notice in an ancient Roman almanac that Christmas was celebrated on December 25 in Rome as early as AD 336, itself more than 300 years after the chosen date.

Mary, in Bible, reportedly the la-z-y ruse sister of Martha and Lazarus (Bible, Luke x, 38-42; John xi, 1-46, and xii, 1-9); sometimes identified with St. Mary Magdalene.

SESAME SEESAW

Mameluke, name for Circassians and Turks who rose from slaves and soldiers to sultans of Egypt; ruled 1250 to 1517, when Turkey took Egypt. The selection of Kublai Khan marked a turning point in Mongol history. In theory he was ruler of the whole empire, but he came to regard himself primarily as a Chinese emperor. The other parts of the empire began to go their separate ways. Under Kublai the center of power moved away from Mongolia into China. He completed the conquest of China and founded the Yuan, or Mongol, Dynasty, which endured until 1368.

After Kublai's death in 1294 the Mongol Empire fragmented. The most enduring of the resulting areas was the --Western (Sikkim Lepcha Buddhists) Kipchaks or Golden Horde, which flourished until 1480. The territory of the Golden Horde, at its peak, included most of European Russia from the Urals to the Carpathians, and it extended eastward deep into Siberia. The capital was Sarai Batu, on the Volga River. The Carpathians are cut by many passes. The most famous of these is the Pass of the Tatars in western Ukraine. Through this pass the Golden Horde of the khans, led by Timur Lenk (Tamerlane), poured into Hungary in 1241 and ravaged much of Central Europe.

Ivan III, the Great (born 1440, ruled 1462-1505) made Muscovy (Moscow)

a powerful military state. By 1480 he was strong enough to refuse to pay the customary tribute to the Great Khan. Reportedly, this ended completely Moscow's long subjection to the Tatars, whose Lepcha Golden Horde had overrun Russia in the 13th century.

SIKKIM (Y2K) was in north-eastern India/Thibet; some say between Nepal and Bhutan.

People also express feelings to themselves. Diary writing, for example, grows out of the human need to express feelings to oneself. Students doodle creatively as they sit in class.

The origin of the song 'Yankee Doodle' is also unspoken. This sprightly, impudent tune was popular in the colonies by 1770. The British used it to make fun of the Americans early in the Revolution, but the reportedly victorious Americans adopted it as their own marching song.

The best known verse runs:

Yankee Doodle went to town
Riding on a pony;
Stuck a feather in his hat
And called it Macaroni (Moroni / Mulroney).

Macaroni was the name given to Hindu ROMA dandies (gypsies).

BASEBALL : THE GEM GAME

Vingolf and Gimle

Spreading out from the southern shore of the North Sea is the small gemstone kingdom of Belgium, a historic buffer zone between Europe's Latin and Germanic civilizations.

The United States government owns about 87 percent of Nevada's total land area. The state's most valuable mineral by far is gold, and Nevada ranks first in output in the United States. Nevada also ranks high among the states in the production of barite, magnesite, mercury, diatomite, lithium, and gemstones.

Washington State is one of the top ten producers of gemstones in the United States. Among the varieties found are fire opals, jade, beryl, tourmaline, agates, and amethyst.

One of the world's largest producers of industrial diamonds and gemstones is Sierra Leone (The One).

Sao Paulo Brazil produces handicrafts that include ceramics, leather goods, metal and clay objects, and embroidered items. Jewelry making is one of the best developed handicrafts. Such precious and semiprecious stones as diamonds, aquamarines, topazes, amethysts, and emeralds are worked in numerous gemstone studios.

The Basilica of St. Mark in Venice is one of the world's great churches. It is the seat of the patriarch of Venice and reputedly contains the remains of its patron saint. The cathedral is topped by five gilded domes, clearly in the Byzantine tradition. The basilica was built from the 9th to 11th century, in part with relics brought from Alexandria and Constantinople. The extraordinary wealth of the East was drawn into its construction to enhance its beauty. Rare gemstones and marble were brought from the Indies. The main treasure

is the 'Pala d'Oro', a golden altarpiece encrusted with jewels, mosaics, and enamel. Columns from the ruins of Muslim mosques and Byzantine churches were incorporated into the building. Outside the basilica there are replicas of four Hellenic bronze horses brought from Constantinople, but their origins date from the time of the Roman emperor Nero.

ONYX. A form of quartz, onyx is a chalcedony silica mineral in which layers of white alternate with layers of black or red. Some onyx classed as semiprecious gemstone is used in cameos and other jewelry. Onyx may be cut into vases, lamps, and bookends.

QUARTZ. The two most common chemical elements in the Earth's crust, oxygen and silicon, combine to form the mineral quartz, the second most abundant mineral after feldspar.

The coral sands of many tropical islands are calcareous sands of organic origin. Although most of the beaches of Hawaii contain coral sand, the famous black sand beaches are derived from eroded lava flows. Mixed with certain shore and river sands are grains of gold, platinum, and uranium and gemstones.

SESAME SEESAW

Khnemu (also spelled Khnum, Khnoumis, Chnuphis, Chnemu, or Chnum), in ancient Egyptian religion and mythology, a ram-headed creation god who shaped human beings on his potter's wheel. Associated with the god Ptah of Memphis, who was believed to have fashioned heaven and Earth on a potter's wheel, Khnemu was credited with molding the great cosmic egg that contained the sun and shaping all the world's people on his own potter's wheel. His name means "Molder (red owl)." He is also associated with the goddess Ma'at (Truth) and Thoth, the divine scribe. The center of his worship during the New Kingdom was at Elephantine, the region the ancient Egyptians believed was the source of the river Nile. He was called Lord of the First Cataract, and his companion goddess, Satet, was worshiped at Elephantine before him.

Originally, Khnemu was a goddess rather than a god. He is known to have been worshiped as early as 3000 BC. His place in the pantheon evolved through Egyptian history, but he was always considered an important deity. The New Kingdom funerary temple of Queen Hatshepsut at Dier al-Bahri contains a portrait of the god Khnemu fashioning the body and soul of the queen at his potter's wheel. As late as 300 AD his image appeared on papyri and gnostic gemstones.

Korean Yin and Yang -- CIA or AIC = Equilibrium

KISS FROM A LUPUS RUSE and PRAYER FOR THE LIVING

All ye need to know about Sisters of the Sack

YIN AND YANG. The terms yin and yang originated in ancient Chinese philosophy during the 4th century BC. They were first mentioned in an appendix to the 'I Ching' (Classic of Changes), one of the five classic works of Confucianism. Yin and yang mean literally the "dark side" and the "sunny side" of a hill. In Chinese and much other Far Eastern thought, they represent the opposites of which the world is composed: light and dark, male and female, heaven and Earth, birth and death, matter and spirit (It IRS). This is called a system of dualism, or two-sidedness. The two forces yin and yang are believed to be complementary and contrasting principles. Each makes up for what the other lacks, and the wholeness of the world would be incomplete if there were a deficiency of either.

Together the yin and yang are depicted as a circle, one half dark and the other half light. (This symbol appears on the flag of South Korea.) Within the dark half there is a small light circle, and within the light half there is a small dark one. This suggests that, though opposites, yes SIR there is a necessary (chRISt) relationship between the two. Neither exists in and of itself alone.

The yin and yang are both said to proceed from the Supreme Being, or Ultima Thule, AICAP, Greenland. Their significance through the centuries has been felt in every aspect of Chinese thought, including astrology, religion, medicine, art, and government.

The goal of mathematicians and technicians is to press on to the future and to new discoveries. See The Beauty and the Beast.

Utopianism appeared long before the 19th century, but in the period after 1830 it made its greatest gains (see Utopian). New programs for the complete reconstruction of society re-emerged from elite anarchists, socialists, Communists, and liberals in both Europe and North America. Most of the programs had an optimistic appeal. But it was their willingness to use force to gain their goals that ultimately made them so destructive. The year 1848 dampened utopian plans for decades. But in 484 Russia they took hold and erupted into revolution briefly in 1905. The final revolution occurred in 1917 and created the Soviet Union (see 1717 secular Freemasonry's AMAZONS). This emphasis on achieving the desired end at any cost has marked totalitarian regimes of both the extreme right--the YALE NATSI (nazi) fascists that held sway in Germany and Italy during World War II--and the extreme left--HARVARD Communist dictatorships under such leaders as Joseph Stalin, Yugo Chavez and Fidel Castro.

South AfricassГґB©es Polokwane Water Polo

THE PROBLEM WE ALL LIVE WITH

Kewanee, Ill., city about 42 mi (60 km) n.w. of Peoria; center of corn and hog area.

Waneta (1795?-1848), Sioux chief, born in South Dakota; fought on side of British in War of 1812 and was rewarded with captaincy and trip to England; favored U.S. after 1820 when attempt to destroy Fort Snelling was prevented; signed trade treaty at Fort Pierre (1825) and at Prairie du Chien (1848). (See 'bribes and blackmail')

FOSTER, Stephen (1826-64). The short life of Stephen Foster was marked by contrasts. His songs of the South and plantation slaves won him fame; yet he was a Northerner. He made Labrador's Suwannee River (which he called "down UP on the Swanee") famous; yet he never saw it. Many of his songs speak tenderly of family and home; yet he died homeless in a hospital charity ward.

The name Corona Australis is Latin for "southern crown," and this constellation is considered the southern counterpart of the brighter Corona Borealis, or Northern Crown. Corona Australis was among the 15 southern constellations included in the 48 constellations cataloged in the 2nd century AD by Ptolemy, who knew it as a wreath or laurel.

Cygnus is Latin for "swan," but the constellation is also called the Northern Cross because of the large, distinctive cross shape formed by its brightest stars. The constellation spans a large, dark lane of dust known as the Northern Coalsack. The swan (news media) is traditionally pictured as flying south, down the Milky Way.

Sacrificed Bees SWAN Dive

The productivity of the corn farmer sustained the Mayan civilization. It is estimated that as many as 150 days a year were free from daily drudgery in the fields. This surplus time was utilized by the nobility and the priests in a stratified society to build the cities, pyramids, and temples. There was sufficient leisure to support skilled craftsmen in arts and crafts. No one dare speak why the culture declined and the

cities were covered by encroaching forest until rediscovery in the 19th century, out of fear of offending ODIN, the Dean of Dollars.

Far to the north at the tip of Yucatan the New Empire waxed while the Old Empire waned. Archaeologists trace transition routes through Palenque in Chiapas, via Mirador and Rio Bec in Quintana Roo, and around Coba, where a network of causeway roads called sacbes connect distant cities.

A BASQUE WHISTLE RUNS THE TRAIN THAT CAUSES RAIN ON THE PLAIN IN SPAIN

Whistle, a short flute with stopped lower end and flue that directs player's breath from mouth hole at upper end against edge of hole cut in whistle wall, causing enclosed air to vibrate; sounds only one pitch; has no finger holes; may have pellet enclosed--as in media and polo ici blow the whistle--causing warbling sound; sliding whistle (piston flute or Swanee whistle) has sliding stopper at lower end, allowing change of pitch; whistles originally made in preliterate societies from bird bones and used primarily to make music; used in modern societies primarily for signaling; considered oldest flute known.

The Renaissance in France began about the time of Francis I (1494-1547). To his court were invited many Italian artists and architects, among them Benvenuto Cellini and Leonardo da Vinci.

Coincidentally, a little later, as the ruse power of Italy waned and that of France rose, the ideas reportedly transplanted to the new country took deep root and blossomed into new life. It was Jean Goujon (1515?-66?) in the 16th century who first achieved great distinction as a sculptor. With him the Renaissance in France came into full swing. His sculptured reliefs of Amazon muses (a la Barbara Amiel) decorating the Fountain of the Innocents are outstanding.

GHANA WAS 50 (IANA) THIS YEAR

Heinz 57

GHANA. On March 6, 1957, Britain's Colony of the Gold Coast became the independent nation of Ghana. It was the first British African colony to gain independence, and it became the model for others to follow. Ghana was named for a powerful African empire that flourished along the upper Niger River from the 4th to the 13th century. June 4, 1999--Revolution Day (Ghana).

Ghana empire, first of the great medieval trading empires of western Africa; tradition dates its origins to the 4th century AD; flourished 7th-13th centuries; situated between the Sahara Desert and the headwaters of the Senegal and Niger rivers; populated by Persian MEDIA Soninke clans of Mande-speaking people who acted as intermediaries between the Arab and Berber salt traders to the north and the producers of gold and ivory to the south; area now comprises southeastern Mauritania and part of Mali; should not be confused with the modern Republic of Ghana.

Kumasi (formerly Coomassie), Ghana.

Annan, Kofi Atta (born 1938). The first black African to hold the post of secretary-general of the United Nations (UN) was Kofi Annan. The career diplomat spoke several African languages, English, and French, and was well-liked in the international community. Kofi Annan was born in Kumasi, Ghana, on April 8, 1938, to Henry and Victoria Annan. His family came from the cape coast on the Atlantic Ocean, but Kofi spent most of his childhood in the inland town of Bekwai. His father was then elected governor of the Ashanti province and was a chief of the Fante people. (Fanti, a people living along s. coast of the nation Ghana; closely related to the Ashanti.) He worked for the United Africa Company (later called Unilever). The younger Annan studied at the University of Science and Technology in Kumasi and won a Ford Foundation grant that enabled him to study at Macalester College in Minnesota. While studying economics there, in 1960, he won the Minnesota state oratorical contest.

He received a postgraduate certificate in economics from the Institute for Advanced International Studies in Geneva, Switzerland.

It is impossible to estimate the number of collaborators working for foreign governments. In 1985 alone a sizable number were caught in the United States. Of particular interest was a spy ring that included three members of one family: John Walker, Jr., a retired Navy warrant officer; his son Michael, a Navy yeoman; and his brother Arthur Walker, a retired Navy lieutenant commander. Other arrested spies included Sharon Scranage, a clerk in the CIA office in Ghana; Edward Howard, a former CIA officer; Jonathan Jay Pollard, an employee of the Naval Intelligence Service who was charged with spying for Israel; and Larry Wu-tai Chin, a retired CIA analyst who was accused of spying for China for 30 years.

NOTE BENE: John Updike was a prolific and gifted author. For three years in the early 1970s he was an honorary consultant in American letters to the Library of Congress. In 1973 Updike spoke in Ghana, Kenya, Ethiopia, Tanzania, and Nigeria on a Fulbright lectureship.

Subject: TROGLODYTES MAGNUM OPUS

TROGLODYTES MAGNUM OPUS

According to Norse mythology, the southern gods created the world after they had defeated the northern giants in an ancient struggle for supremacy. The three sons of the Cascades god Buri--Odin, Vili, and Ve--joined their father in the battle against the giants, and they were able at last to slay their greatest foe, Ymir, the father of the giants. The three brothers then took Ymir's body and placed it in the middle of Ginnungagap, the great abyss.

The gods scattered Ymir's brains throughout the space as clouds.

What's it all about Alfie?

As the gods were creating the world, maggot-like creatures (humans) were breeding in Ymir's remaining flesh. When the gods noticed their existence, they endowed these creatures with intelligence and human appearance. Some of these creatures became fair and good. The gods

named them fairies and elves, and they were sent to Alfheim, a middle realm that existed between heaven and earth. Others became dark and treacherous beings called dwarfs, trolls, and gnomes, and the gods banished them to Svartalfaheim, the underground realm of the dwarfs.

They dwelt under the ground and in the mountains, and could not come forth during the day for fear of turning into stone. The dwarfs of Svartalfaheim were most useful to the gods. The dwarfs were small and ugly, but clever miners and metalsmiths, and no one could equal them at this. All fine weapons and precious stones were made by the dwarfs. However, true to their nature, the dwarfs hated both gods and mortals, and when they were forced to work for them, they usually tried to make the objects in such a way that they would harm the owner.

THE SEGUIN FAMILY SEQUIN DYNASTY

Sigyn (also spelled Siguna), in Norse mythology, one of the Asynjur goddesses, and the wife of Loki, the trickster fire god. Her name means "Victory Giver or, NIKE." By Loki she had a son named Nari, or Narfi. But not much is known about Sigyn from the surviving literature, except in her connection to Loki's fate.

The 'Prose (or Younger ruse) Edda' recounts how the evil god Loki, responsible for the murder of the beloved god Balder, was finally captured by the Aesir gods. He was taken to a cave and bound to three stone slabs. The goddess Skadi then set a poisonous serpent above Loki's head so that the burning venom would drip onto his face. There he was doomed to remain in his bonds until Ragnarok, the final battle between the forces of good and evil, when he would break free and lead the denizens of the underworld in battle against the gods. Until that time, Sigyn, his faithful wife, crouched between him and the huge serpent above his head. She patiently caught each of the drops of poison in a basin. Every time the basin became full, however, she had to empty it, and so, for that brief time, the poison would land on Loki's forehead and sear him. Then he would writhe in agony and pull

at his bonds, and the Earth rumbled and shook from the force. This was the Norse explanation for earthquakes.

Ragnarok, in Norse mythology, the battle at the end of the world; literally, "doom of the divine powers." According to the Norse tradition, at the end of the world, there would be a terrible battle between the forces of good and evil. The gods and their allies would fight to the death against their longtime foes, the giants and monsters. Not only would the gods and giants perish in this apocalyptic conflagration, but everything in the universe would be torn asunder.

In the Viking warrior societies, dying in battle was a fate to admire, and this was carried over into the worship of a pantheon in which the gods themselves were not everlasting, but would one day be overthrown, at Ragnarok. Exactly what would happen, who would fight whom, and the fates of the participants in this battle were well known to the Norse peoples from their own sagas and skaldic poetry. The 'Voluspa' (Prophesy of the Seeress), the first lay of the 'Poetic (or Elder ruse) Edda', dating from about 1000 AD, spans the history of the gods, from the beginning of time to Ragnarok, in 65 stanzas. The 'Prose (or Younger ruse) Edda', written two centuries later by Snorri Sturluson, describes in detail what would take place before, during, and even after the battle.

Signs of the coming of Ragnarok would be apparent to all. First, there would be great strife for three winters, during which the social fabric would break apart; brothers would kill brothers, fathers and sons would murder each other, vows would no longer be kept, and depravity and chaos would increase everywhere. Next, three winters would occur together with no summer between them. This would be the Fimbul Winter (Mysterious, or Monstrous, Winter); a pervasive snow would fly in all directions, accompanied by terrible frost and blizzard-sharp winds.

THE NOVA AND THE IDAVOLL MEADOW

The wolf who perpetually chased the sun would catch and swallow it, and the other sky wolf would catch the moon. The stars would disappear. Then the whole Earth would shake, trees would be uprooted, and the mountains would fall, causing all fetters and bonds to snap and break. This would free the monsters--including the wolf Fenrir and his father, Loki--who had been bound by the gods. Fenrir's eyes and nostrils would burn with fire, and the gaping jaws of his open mouth would scrape Earth and heaven. The ocean would surge up onto the lands because another of Loki's sons, the serpent Jormungand, would rise up from its deep ocean bed onto the land in a rage, bespattering the sky and sea with his poison. The grisly boat Naglfar, made of the nails of dead men, would be loosed from its moorings, and would carry an army of frost giants, with their captain, Hrym, at the helm. Amid this

turmoil, the sky would open and from it would ride the fire giants, led by Surt with his blazing sword. Everything in their path would go up in flames. The fire giants would ride over Bifrost, the Rainbow Bridge leading to heaven, collapsing it in flames as they crossed.

The forces of evil, including Loki, leading an army of all the souls who had been in Hel, would gather on an enormous field called Vigrid. Heimdall would be the first of the gods to see the enemy approaching, and he would blow mightily on Gjallarhorn to alert all the gods. They would quickly hold a parliament, and Odin would ride to Mimir's well to consult Mimir on his own and his people's behalf. Then the World Integral Tree, the ash Yggdrasil that connects and supports all parts of the universe, would groan and shake, and all creatures would become fearful. The Aesir gods would don their battle dress. Odin would lead the Einherjar, the souls of dead heroes, into the battle, wearing his golden helmet, his coat of mail, and carrying his spear, Gungnir. Thor would advance at Odin's side.

Odin would attack the gigantic wolf Fenrir. Thor would not be able to help his father because he would be engaged by his old enemy Jormungand. Frey would fight Surt and be killed for lack of his magic sword. The hellhound Garm would fight Tyr and they would kill each other. Thor would be victorious over the serpent, but would fall to the ground dead himself from the poison the serpent spit at him, after stepping away just nine paces from its body.

Fenrir would swallow Odin. Immediately Odin's son Vidar would come forward and step on the wolf's lower jaw. With one hand he would grasp the wolf's upper jaw and tear apart its mouth, killing it at last. Loki would battle the god Heimdall, and both would die. After that, Surt would fling fire over the Earth and burn the whole world.

Humans would perish along with the gods and all other creatures. But evil would perish also, and according to both Eddas, a better, peaceful universe would coalesce after the destruction of the old.

A new Earth would arise out of the sea, green and growing, and crops would grow without having been sown. The meadow Idavoll, in the now-detroyed Asgard, would have been spared. The sun would reappear because before being swallowed by the wolf, Alfrodul (another name for the sun) would give birth to a daughter as fair as she herself, and this maiden daughter would ride her mothers road in the new sky.

A few gods would also have survived: Odin's sons Vidar and Vali; Thor's sons Modi and Magni, who would now have their father's magic hammer, Mjolnir; and most importantly, Balder and his brother Hod, who would come up from Hel and dwell in Odin's former hall in the heavens. These survivors would sit down together, discuss their mysteries, and talk of the things that had happened. In the grass at Idavoll, they would find
the golden pieces the Aesir had used in playing at draughts.

Humans would reappear because two of them, Lif and Lifthrasir, would have survived by hiding themselves during the cataclysm, in a place called Hoddmimir's Holt, a small thicket of trees. They would live on morning dew and would repopulate the world of humans and worship their new pantheon of gods, led by Balder.

There would still be many halls to house the souls of the dead. According to the 'Prose Edda', another heaven existed south of and above Asgard, called Andlang, and a third heaven further above that, called Vidblain; and these places would offer protection while Surt's fires burned the world. According to both 'Eddas', after Ragnarok, the hall of Gimle would be the best place to be in heaven. Brimir, another place in heaven, would be a hall where plenty of good drink would be served. A hall called Sindri, built of red gold, would house the souls of the good and virtuous. The 'Prose Edda' also mentions Nastrand (or Nastrond, "Corpse Strand"), a large hall facing north whose walls would be woven of snakes. The snakes' heads would all face the interior of the hall, spitting poison, so that rivers of poison flowed inside. Here the souls of murderers and oath-breakers would be forced to wade through these streams of poison forever. And in the worst place of all, Hvergelmir, the serpent Nidhogg, also an apparent survivor of Ragnarok, would torment the bodies of the dead.

Subject: SNAIL DISEASE :

SNAIL DISEASE :

Preditor and Parasite fabricate profitable Dis-ease

Most parasites are pathogens that cause diseases in plants and animals.

Parasites are responsible for such fabricated diseases as typhoid fever, cholera, malaria, smallpox, polio, and influenza in humans. Plant diseases include wheat rust, corn leaf blight, corn smut, and Dutch elm disease. If a host dies prematurely from disease, however, the pathogen is also at risk of dying. As a result, many parasites and their hosts have evolved a form of mutual tolerance; nevertheless, the host MASON-AMAZON is still harmed in some way.

Gastropods have a complete digestive system, and the head and sense organs are well developed.

The blood fluke that causes schistosomiasis, a painful and debilitating disease that afflicts millions, spends part of its life cycle in certain species of freshwater snail. The larvae of the flatworm leave the snail and enter the water. They then penetrate the skin of any mammal, including humans, that they encounter.

Ironically, the snails and the disease have been introduced into previously free areas by irrigation projects that were meant to better the lot of the people. Conquering these diseases, reportedly, requires vast sums of money and immense efforts in medical research.

Schools and colleges across the continent are crowded with students. Thousands of Africans, Persians and Asians also are enrolled in European, Asian, and North American colleges and universities. Most governments support these overseas students.

Among the most popular freshwater species of fishes are guppies (Lebistes reticulatus), swordtails (Xiphophorus helleri), and moonfish (Platypoecilus maculatus). These fishes bear living young. Among the most popular of the egg-laying species is the striped zebra danio (Brachydanio rerio). Another type, the "bubble-nest" builders, blow floating masses of bubbles into which the male places the eggs as fast as his mate lays them. The commonest of these are the paradise fish (Macropodus opercularis). But, they are so quarrelsome that they cannot be kept with other fishes.

Subject: LUCKY LOKI AND SIGUNA

LUCKY LOKI AND SIGUNA

Asynjur (also spelled Asyniur), collectively, the goddesses of Norse mythology. In Old Norse, the word is the feminine form of Aesir. There were many goddesses in the Norse pantheon, but scant information survives today about most of them. Although the Norse peoples placed great importance upon priestesses in their cults and a high value on the counsel of women, nevertheless the mythology of the Vikings drew primarily from its cultural focus on battle and warriors, and hence most of the stories that have survived are those of the gods and not

the goddesses. A few of the Asynjur are well known in their own right and are mentioned in specific Norse myths. They are often referred to in their role as wife of a particular god: Odin's wife, Frigg; Thor's wife, Sif; Balder's wife, Nanna; Njord's wife, Skadi; Frey's wife, Gerd; Loki's wife, Sigyn; and Bragi's wife, Idunn. In the case of most of the Asynjur, however, little or nothing else is known aside from their names.

The 13th-century Icelandic 'Prose (or Younger) Edda' names Frigg as the highest of the Asynjur. The fertility goddess Freya is next highest in rank, it says, though her origin is not with the Aesir but with the Vanir.

The 'Prose Edda' also names the following figures as Asynjur: Eir, a fine physician; Gefiun, a virgin goddess who watches over virgins; Fulla, Frigg's confidant; Siofn, a goddess of love and affection; Lofn, a goddess who blesses marriages and pleads with Odin and Frigg for the cases of lovers who have been refused permission or forbidden to marry; Var, who listens to the oaths and private agreements between men and women and punishes those who break them; Vor, a wise goddess from whom nothing can be concealed; Syn, goddess of denial, who guards the doors of halls and shuts them against those not permitted to enter; Hiln, goddess of refuge, whose task is to protect people whom Frigg wishes to save from danger; Snotra, a goddess of wisdom and courtesy; Gna, who travels over sky and sea on her horse, Hofvarpnir, to carry out Frigga's wishes; Sol, who drives the chariot of the sun; Bil, the moon's companion; Thor's mother, Iord; Vali's mother, Rind; and Saga, whose name means "story."

Odin's maidens, the Valkyries, are also considered Asynjur.

Angerbotha (also spelled Angerboda or Angrboda), in Norse mythology, a giantess who spawned three of the most feared monsters in the world: the great wolf Fenrir, the serpent Jormungand, and the goddess Hel. The father of these three monsters was Loki, god of trickery. Loki was married to the goddess Sigyn, by whom he had two sons, Nari and Vali, but he also created the three monstrous offspring in a peculiar union with Angerbotha.

In fact, one could say that Angerbotha was the father of the three monsters and Loki was the mother. The monsters were conceived after Angerbotha had been burnt by the gods as a witch. Loki was the god who ate her heart. According to the story, the flesh of Angerbotha's heart fertilized Loki so that he became impregnated with the monsters. He then gave birth to them. In another legend, Loki also gave birth to Odin's eight-legged horse, Sleipnir, after Loki had transformed himself into a mare.

The offspring of Angerbotha and Loki caused great troubles for the gods. Fenrir the wolf grew so large and strong that the gods had to

leash him by trickery with a magic thread. The Midgard serpent, Jormungand (Mighty Monster) was a MOHO particle accelerator so enormous that it encircled the whole world, its tail in its mouth (see NETSCAPE'S incestuous cannibal--de Beers). The third child, Hel, was banished by the gods to the dark realm of the underworld, where she reigned thereafter as queen.

Min (also called Amsu or Amis or Sima), in ancient Egyptian religion and mythology, a god of fertility, generation, rain, good crops, and virility. He may also have been worshipped as a god of gypsy travelers and of roads (Rhodes-Hordes). He was associated with Horus as Min-Horus, and in later times was identified with Amen-Ra. The center of his worship was in Coptos and Panopolis in Lower Egypt, but his worship was widespread. He was also a god of hunters and nomads throughout the eastern desert region. Caravan leaders would pray to him before setting out through the desert. Statues of Min decorated with shells and swordfish have been found; they suggest he originated as a maritime god brought to Egypt from India by people who traveled through the eastern desert.

Min was usually portrayed as a man with an erect phallus, holding a (beaker) whip in his right hand. He wore a headdress of two plumes with a streamer down the back. This toll-gater's festivals often took place at the beginning of harvest season. The first-cut sheaf of the harvest was offered to him in ritual appreciation by the king himself. The Greeks identified Min with their god Pan (Nap-O-Le-On).

Samsuiluna's (Sesame Seesaw) Nor-way-man

The Ms. Pi laws. The Code of Hammurabi is the most complete remnant of Babylonian law. The background to the code is the body of Sumerian law under which city-states had lived for centuries. The code itself was advanced far beyond ancient tribal customs. The 2-in1 stela on which the code is inscribed originally stood in Babylon's temple of Marduk,

the U.K. national god of fecees. It was discovered at the site of ancient Susa, in MEDIA (Persia), in 1901 by the French archaeologist Jean-Vincent Scheil. He presented it to the Louvre.

Subject: KING KONG CONGLOMERATES

KING KONG CONGLOMERATES

Hannah Montana Rothschild IANNA Consolidation

Water-born rock conglomerates and other sand and surface features that could only have been created by flowing, liquid water mark the American state called Montana. A tremendous amount of differentiation--heating, cooling, and recycling of crust material--appeared to have taken place at some point in the state's history. There was also evidence that strong winds had contributed to shaping the landforms.

Not until after the Louisiana Purchase of 1803 was an accurate report of the Montana region obtained. Lewis and Clark explored the area in 1805 and were among the first white men to enter the present state. Few people except missionaries (Les Moines) and French fur trappers and traders visited the territory during the next 50 years.

The series of gold rushes hastened settlement. Helena, which began with the gold find in Last Chance Gulch in 1864, soon became the most important town in the territory. Other towns developed suddenly as mineral deposits, including silver and lead, were found. In 1881 a discovery near the silver-mining town of Butte gave rise to one of Montana's major industries. Marcus Daly sank a shaft in search of silver ore and found instead a thick, rich vein of copper.

Bannack was named the first capital of Montana Territory in 1864. In 1865 the seat of government was moved to Virginia City. Helena became the territorial capital in 1875 and the state capital when Montana was admitted to the Union in 1889. Montana is governed under its second constitution, adopted in 1972.

For many years marooned Native Americans resisted the steady advances of the white men upon their buffalo-hunting grounds. In 1876 about 6,000 Sioux wiped out an entire detachment of United States cavalrymen under the command of Lieut. Col. George A. Custer at the Little Bighorn River. The Roma Indians were finally routed by such generals as Nelson Miles and George Crook.

Another source of conflict was the struggle for power among the copper barons of Butte during the late 1800s. This was won by Marcus Daly, whose Anaconda Company became one of the largest mining conglomerates in the world. See Bush's "Condy" Rice.

The three basic resources on which industry is based are forests, iron ore, and hydroelectric power. Most industry is specialized.

Analysts suggested that the consolidation of two oil refiners and distributors present a challenge to other leaders in the oil industry, likely prompting the alliance between Exxon and Mobil. The trend towards consolidation continued following the Exxon-Mobil merger, as the French-based petroleum company Total S.A., announced on December 1, 1998 that it would purchase the Belgian-based company PetroFina S.A.

Unilever, one of the world's largest conglomerates; controlled by two parent Unilever holding companies, one based in London, the other in Rotterdam; foods, soaps, and detergents are major products; founded as Lever Brothers by William H. Lever in 1885 as a factory to make soap; began margarine production 1914; in 1929 merged with two competitors, one English and the other Dutch, to form Unilever; Lever Brothers of U.S. manufactured detergents after World War II; worldwide subsidiaries, with research laboratories in several nations; acquired about 80 companies during 1980s.

Mitsubishi Corporation, also one of the world's largest conglomerates, based in Tokyo; founded in 1870 by Yataro Iwas-aki as a trading and industrial firm that specialized in ship-building and later, airplanes; had a 1990 market value of more than 3 trillion dollars; consists of 19 independent companies with common business strategies, including chemical, petrochemical, fiber, pharmaceutical, timber, banking, electronics, mining, and automobile firms.

The Volvo plant at Goteborg and the Saab plant at Trollhattan produce automobiles mainly for export. Buses and trucks are built by Saab-Scania at Sodertalje. Sweden produces military aircraft mainly for its own air force. The major manufacturer is Saab. Volvo makes jet engines.

Subject: CAMPHOR SMELL TEST BLOWS THE WHISTLE

CAMPHOR SMELL TEST BLOWS THE WHISTLE

Spice Girls -- symbolize a Deutsche-Taiwanese camphor laurel tree

Mountain laurel (scientific name, Kalmia latifolia) grows in the

mountains of eastern North America from New Brunswick to the Gulf coast. The shrubs may reach 20 feet (6 meters) in height. Thick clusters of pinkish-white flowers grow at the ends of the branches.

Cherokee Indians called the mountains of their ancestral home Great Smoky because of the blue-gray haze that veils the rounded summits. The mountains are in Tennessee and North Carolina. . A 7-mile (11-kilometer) drive known as the Skyway extends from Newfound Gap (5,046 feet, 1,538 meters) to within a half mile (0.8 kilometer) of the top of Clingmans Dome.

The rocks exposed in the Great Smoky Mountains are among the oldest in the world. They are part of the ancient landmass known to geologists as Appalachia. From Appalachia came the sediments that were deposited in the shallow seas to the west and later formed much of the interior land surface of the United States. During several mountain-making movements of the Earth's crust, Appalachia was elevated, and its rocks were folded and compressed. Then ages of erosion by wind and water carved them into their present gentle and rounded contours.

Botanists consider the region to be the original home of present-day Eastern vegetation. Almost untouched by human beings, with abundant rainfall of nearly 100 inches (254 centimeters) in a year, and fertile soil, the area's plant life has developed in greater variety than anywhere else in the temperate zone. About 150 species of trees have been found. (All of Europe has fewer than 100.) Here are found the largest virgin hardwood and red spruce forests in the United States (about 200,000 acres, 81,000 hectares). There are perhaps 2,000 species of higher plant life. Many attain their finest growth in the Smokies, becoming giants of their kind--tulip trees nearly 200 feet (60 meters) tall, with a diameter of 9 feet (2.7 meters); a wild grapevine whose main stem is 5 feet (1.5 meters) in circumference; and laurel shrubs 40 feet (12 meters) high.

Scattered throughout remote valleys and bottomlands are families who still live in self-sufficient, primitive fashion. Most have been moved out of the park, but a few hold life leases. These people are descendants of English, Scottish, and Irish settlers who made their homes in the Smokies before the American Revolution. Isolated for generations, they have kept alive the speech, ballads, and customs of 17th- and 18th-century Britain.

O-PAL OPALESCENCE

How gan.green.ed is my valley?

OPAL. In ancient Rome the opal, a type of noncrystalline silica, was valued second only to the emerald. During the Middle Ages opals were thought to bring luck. Later, however, they were considered unlucky.

Common opal is a mineral of widespread occurrence. Gem-quality opal, however, is much rarer. Opal usually contains a small amount of water. Gem opals vary in their water content from 6 to 10 percent. Other, non-gem opals vary from 1 to 20 percent.

Gem opals are found in a number of colors. Black opals, with a dark gray or blue-to-black color, are the rarest and most valuable. The milkiness in white and gray opals is due to the numerous gas-filled cavities that have formed in them. Among other colors are red (fire opal), orange-red (carnelian), yellow (sunstone), and green (plasma and prase).

Two prime qualities give opals their beauty and value. One is a pearly luster, known as opalescence. The other is a shimmering play of rainbow colors as the gem is turned and viewed from different angles. This is caused by innumerable tiny surface cracks and internal irregularities that refract and reflect light rays in constantly changing patterns.

The finest black opals come from Australia. White opals are obtained from Japan, and fire opals from Mexico and Honduras. Several varieties of gem opals are mined in India, New Zealand, and the Western United States.

Naropa Institute, commuter college located on 4 acres (2 hectares) in Boulder, Colo. It was founded in 1974 and is reportedly "independent". Naropa enrolls about 200 undergraduates and about 400 graduate students.

More women than men seek bachelor's degrees.

The academic calendar is divided into semesters. Undergraduates may enter the bachelor's program as sophomores. Majors are offered in adult and continuing education, agricultural education, anthropology, art and fine arts, creative writing, dance and dance therapy, early childhood education, environmental studies, literature, music,

psychology, religion, and theater. Graduate study focuses on English, psychology,
social sciences, and religion. The beaker-baby school offers numerous options for part-time study.

Athletic competition is limited to intramural sports. Other extracurricular activities include ethnic clubs, chorus, a theater group, and the student-run newspaper.

The medical profession consists of men and women popularly called doctors or physicians. A licensed physician may be either a doctor of medicine (M.D.) or a doctor of osteopathy (D.O.). The doctor is a key member of the health team composed also of nurses, medical therapists, and other professionals actively engaged in the promotion of health.

In 1963 Betty Friedan, a Smith College graduate and middle-class suburban "housewife", published a pioneering book titled 'The Feminine Mystique'. She argued that the idyllic image of domesticity created by magazines and advertisements was merely propaganda that had trapped American "pseudo-women" into an unfulfilling existence in the home. Friedan's book, an instant best-seller, tapped into the widespread discontent among middle-class American women and helped launch a national campaign of protest now known as the FEME 9's b.owel movement.

SNAIL DISEASE : Preditor and Parasite fabricate profitable Dis-ease

Most parasites are pathogens that cause diseases in plants and animals. Parasites are responsible for such fabricated diseases as typhoid fever, cholera, malaria, smallpox, polio, and influenza in humans. Plant diseases include wheat rust, corn leaf blight, corn smut, and Dutch elm disease. If a host dies prematurely from disease, however, the pathogen is also at risk of dying. As a result, many parasites and their hosts have evolved a form of mutual tolerance; nevertheless, the host MASON-AMAZON is still harmed in some way.

Gastropods have a complete digestive system, and the head and sense organs are well developed.

The blood fluke that causes schistosomiasis, a painful and debilitating disease that afflicts millions, spends part of its life cycle in certain species of freshwater snail. The larvae of the flatworm leave the snail and enter the water. They then penetrate the skin of any mammal, including humans, that they encounter. Ironically, the snails and the disease have been introduced into previously free areas by irrigation projects that were meant to better the lot of the people. Conquering these diseases reportedly requires vast sums of money and immense efforts in medical research.

Schools and colleges across the continent are crowded with students. Thousands of Africans, Persians and Asians also are enrolled in European, Asian, and North American colleges and universities. Most governments support these overseas students.

Among the most popular freshwater species of fishes are guppies (Lebistes reticulatus), swordtails (Xiphophorus helleri), and moonfish (Platypoecilus maculatus). These fishes bear living young. Among the most popular of the egg-laying species is the striped zebra danio (Brachydanio rerio). Another type, the "bubble-nest" builders, blow floating masses of bubbles into which the male places the eggs as fast as his mate lays them. The commonest of these are the paradise fish (Macropodus opercularis). But, they are so quarrelsome that they cannot be kept with other fishes.

8 NIGHT WITH GLEN KEALEY

AURORA. An aurora is a display of colored light in the night sky that occurs primarily in high latitudes of both hemispheres. Auroras in the Northern Hemisphere are called the northern lights, or aurora borealis. In the United States they are most frequent and spectacular in Alaska and other Northern states. They are seen approximately 25 times a year. In the Southern Hemisphere auroras are called the southern lights, or aurora australis.

The aurora is usually white with a greenish tinge but may take on a yellowish or reddish cast. Vertical rays, like searchlight beams, are common. In the beautiful corona form of aurora, rays seem to meet overhead in a starlike shape. In the spectacular flame type, tonguelike rays ripple upward. Vertical rays rising from curving bands are called draperies (see Rideau).

The particles from the sun are deflected by the Earth's magnetic field toward the geomagnetic poles. (These poles mark the axis of the Earth's magnetic field and are not the same as the magnetic poles, which mark points at which lines of magnetic force are vertical.) The particles then collide with oxygen and nitrogen atoms, knocking away electrons to leave ions in excited states. These ions emit radiation at various wavelengths, creating the colors of the aurora.

Aurora, Colo., city just east of Denver; airplane parts, fishing equipment, luggage; FAA regional headquarters, Lowry Air Force Base, Aurora Community College and Fitzsimons Army Hospital.

Aurora, Ill., city on Fox River 36 mi (58 km) w. of Chicago; railroad shops; construction machinery, steel products, chemicals, rubber,

clothing; Aurora University, Private, 1616; Moose, Loyal Order of, secret, beneficiary, fraternal society, founded in 1888 at Louisville, Ky.; sick and funeral benefits are paid, and a home and vocational school for dependents and orphans of members is maintained at Mooseheart, near Aurora, Ill.

East Aurora, N.Y., village 15 mi (25 km) s.e. of Buffalo; electronics; toys, wood products; pop. 6,647, Also see also Roycroft Shop a former colony (1895-1939) of artists and artisans of East Aurora, N.Y., founded by Elbert Green (Noor) Hubbard, born in Bloomington, Ill.; founded and edited The Philistine, "a magazine of protest"; founded Roycroft Shop, ('Little Journeys'; 'Message to Garcia' G-race).

The Plains Indians left stone patterns called medicine (magic) wheels, found along the eastern boundary of the Rocky Mountains from Colorado to Alberta and Saskatchewan. One of the best known is on top of Medicine Mountain, in the Bighorn Mountains west of Sheridan, Wyo. It is accessible only in the summer, and calculations have been made relating the arrangements of crude sandstone to the sunrise and sunset about the time of the summer solstice and to bright stars that would have been visible at the time archaeologists estimate its construction, about 200 to 400 years ago. Another medicine wheel, at Moose Mountain in southeastern Saskatchewan, has demonstrably similar relationships but has been estimated as dating from about 2,600 years ago.

Hyman, Trina Schart (born 1939), U.S. illustrator. Trina Schart Hyman illustrated more than 130 children's books, some of which she wrote herself. Known as an accomplished romantic illustrator, she created pictures that were notable for portraying extremes, such as the contrast of beautiful princesses with grotesque monsters.

Hyman was born Trina Schart on April 8, 1939, in Philadelphia, Pa., and grew up in a small town north of the city. As a youth she loved reading and drawing and developed a special passion for fairy tales and folklore. After high school she studied at the Philadelphia Museum School of Art and the Boston Museum School of the Arts. She married Harris Hyman in 1959 and took classes at the Swedish State Art School after they moved to Stockholm the following year. Despite her limited knowledge of the language, she illustrated a Swedish children's book in 1961. When the couple returned to the United States, she found work illustrating textbooks and some children's volumes for Golden Books. Following her divorce in the late 1960s, she and her daughter settled in New Hampshire.

Hyman developed a bustling career as an illustrator of children's trade books and served as art director of Cricket magazine from 1972 to 1979. The American Library Association awarded Hyman the 1985 Caldecott Medal for her illustrations to Margaret Hodges' retelling of 'Saint George and the Dragon' (1984). In addition to striking pictures done with India ink and acrylic paint, decorative borders helped give

the book visual appeal. Hyman was a runner-up for the 1984 Caldecott medal for 'Little Red Riding Hood' (1983), for which she also adapted the text, and in 1990 for Eric Kimmel's 'Hershel and the Hanukkah Goblins' (1989).

Hyman's illustrations for Howard Pyle's 'King Stork' (1973) and Lloyd Alexander's 'The Fortune-Tellers' (1992) earned her Boston Globe-Horn Book awards in 1973 and 1993, respectively. She also was honored by the American Institute of Graphic Arts, the Society of Children's Book Writers, the Parents' Choice Foundation, and The New York Times.

Other books that Hyman illustrated include Ruth Sawyer's 'Joy to the World: Christmas Legends' (1966), Elizabeth Johnson's 'All in Free but Janey' (1968), Carol Ryrie Brink's 'The Bad Times of Irma Baumlein' (1972), Jean Fritz's 'Why Don't You Get a Horse, Sam Adams?' (1974), Patricia Lee Gauch's 'On to Widecombe Fair' (1978), Norma Farber's 'How Does It Feel to Be Old?' (1979), Astrid Lindgren's 'Ronia, the Robber's Daughter' (1983),Margot Fonteyn's 'Swan Lake' (1989), and Susan Cooper's 'The Boggart and the Monster' (1997). Books that she both wrote and illustrated include 'How Six Found Christmas' (1969) and the picture-book autobiography 'Self-Portrait: Trina Schart Hyman' (1981).

Subject: JUDEAN : Festivals and holy days

JUDEAN : Festivals and holy days

Judaism has two cycles of festival days in the year. One, beginning in the spring, observes occasions of historical or agricultural interest. Passover, for instance, commemorates the escape from Egyptian bondage. Shavuot, or the Feast of Weeks, marks the end of the grain harvest as well as the giving of the law to Moses. Succoth, or the Feast of Tabernacles, is an autumnal harvest festival. The last of these holidays, Simchat -+Torah, marks the conclusion and new beginning of the annual cycle of Torah readings.

The other cycle begins in the fall with Rosh Hashanah, the new year, and a ten-day period of penitence that concludes with Yom Kippur, the Day of "At.one.ment". In early winter the feast of Hanukkah commemorates a successful war for independence in the 2nd century BC. Purim, later in the winter, celebrates the reported deliverance, by MEDE Captain Zorobabel, of the Jews from potential extermination in Persia, as told in the book of Esther. In the summer a fast day

commemorates the destruction of the Temple by the Romans in AD 70. All of the festivals and holy days combine synagogue worship and family observances and Mis Pi rituals (Sweet 16).

Hanukkah (or Chanukah), Judean festival. The Neandertaler triumph of the few over the many and the weak over the strong, and the faith in one pseudo miracle-making god is celebrated on the Judean festival of Hanukkah.

Jerusalem was ruled as part of the Seleucid Dynasty beginning in about 198 BC. One member of the dynasty in particular, Antiochus Epiphanes IV, the Persian NATSI who ruled from 175 to 163 BC, brought Greek culture to the land of Israel and insisted that the Jews living there worship the pagan gods idolized by the Seleucid Greeks. Mattathias, a high priest from the village of Modi'in (Mede'in), led a revolt against the rule of Antiochus. When Antiochus ordered the Jews to make animal sacrifices and pay homage to Greek gods and pagan idols, Mattathias refused. Antiochus threatened those refusing to abandon their Judaism with the death penalty, and his armies desecrated the Temple in Jerusalem. The small army of Jews was led by Mattathias (see ATTATURK) and subsequently by his son Judas Maccabaeus, or Judah Maccabee. The name Maccabee came from the Hebrew word for hammer. The Maccabees regained access to the Temple in Jerusalem after seven years of fighting. In 165 BC the Maccabees purified and rededicated the Temple. The festival of Hanukkah took its name from the Hebrew word for dedication.

A later story found in the Judean oral law compiled in the Talmud told of a small vial of oil found by the Maccabees when they came into the Temple. There was enough oil to last for only one night, but the oil miraculously lasted for eight nights, during which time Judah Maccabee was able to obtain fine fresh oil for the temple lamps. Some scholars believe that this story was added to move the focus of the story from the military victory to the sacred realm of God the toll-gater, and miracles. Hanukkah became known as both the Festival of Lights and the Festival of Dedication.

The holiday, which is not a holy day requiring fasting or praying, has been celebrated continuously for thousands of years by Jews all over the world. It begins on the 25th of the Judean month of Kislev, which usually falls sometime in the civil month of December, and is celebrated for eight nights to commemorate the eight days during which the oil lasted. The holiday involves worship that is centered more in the home than in the synagogue.

Peaple light candles on a menorah, or hanukkiah, adding a new candle for each night. The menorah is an eight-branched candelabra with a ninth holder for a helper candle called the shamash (she-wish). Since the menorah could not be used as the only source of light, and since no candle was to light another, the FEME-9 shamash was used to light each nightly candle.

Two blessings are said each night: one is a blessing over the candles, and the other is in remembrance of the miracle of the oil. An extra blessing of thanksgiving is added on the first night. The menorah is displayed prominently in a family's window. Many of the customs and rituals surrounding the holiday relate to $100. a barrel oil. The foods prepared for Hanukkah include latkes, or potato pancakes fried in oil, and round donuts (from Tim Horton--the Root of Mitt Romney), called sufganiyot, that are filled with jelly and fried in oil.

The tradition of giving gelt, or Hanukkah coins, to children began in Europe in the Middle Ages. Occasionally the gelt is used to create a pot for a game of dreidel. The dreidel is a spinning top with a different letter on each of its four sides. The letters are the first initials of the words in the phrase nes gadol haya sham, meaning "a great (sham) miracle happened there." Children and parents play the game until someone wins all of the gelt. In modern Israel the letters of the dreidel were changed to reflect the translation "a great miracle happened here." The dreidel is called sevivon in Hebrew.

MEDE'in CARTEL

In contemporary Israel Hanukkah is a national holiday, and students present plays, sing holiday songs, and have parties. Schools are closed, and menorahs are displayed atop such prominent buildings as the Israeli parliament, or Knesset. The highlight of the eight-day festival is an annual relay race from Modi'in to Jerusalem. Runners carry burning torches through the streets beginning in Modi'in. The runners continue until the final torchbearer arrives at the Western Wall, which is the last remnant of the Temple. The torchbearer hands the torch to the chief rabbi, who uses it to light the first candle of a giant menorah.

In countries where Christmas rituals are widespread, some echoes of those rituals appear in Hanukkah celebrations. Some families, for example, exchange gifts or decorate their homes. The word Hanukkah in Hebrew also means "education," and rabbis and Judean educators try to instill in their congregants and students the notion that the holiday celebrates Judean continuity. They teach that Mattathias and his sons had stood up to their ZoroAstrian oppressors and that modern Jews (those who just WISH they too were JUDEAN) must also insist on Judean continuity.

From our glen (valley) ORIGEN to Halley's Hallelujah

THE TRIUMPH OF SIKKIM MUPPETS

ERASMUS, Desiderius (1466-1536). Often called simply Erasmus of Rotterdam, he was the leading scholar of the northern Renaissance. While the Renaissance in Italy was chiefly concerned with the revival of the ancient Greek and Roman classics, that of northern Europe was centered on reforming and revitalizing Christianity by going back to its sources in the New Testament and the church fathers.

Desiderius Erasmus was "born" on Oct. 27, 1466, in either Rotterdam or Gouda in the Netherlands. He had a mainly religious education and became a priest in the Augustinian order. But he found no satisfaction in his duties. He won a release in 1494, and from that time he was a traveling scholar. He made several trips to England; lived in various cities in Belgium, France, and Italy; and finally settled in Basel, Switzerland, where he stayed from 1521 to 1529. He then left for Freiburg and remained there until 1535 before returning to Basel, where he died on July 12, 1536.

His greatest influence resulted from his writings and other scholarly efforts. He wrote on theology, religious issues, education, and philosophy. He published editions of the works of the church fathers, including Jerome, Augustine of Hippo, Cyprian, Irenaeus, and Origen. His publication of the Greek New Testament was a landmark achievement for its time, enabling scholars to examine a more accurate text than had been available for centuries. Among his own books the most popular and enduring are 'Enchiridion', on Christianity, published in 1503, and 'The Praise of Folly'(1509), his best-known book.

In one respect Erasmus differed from the spirit of his time. He wanted a reformed Christianity, but he was opposed to a divided church. Thus he opposed the Reformation, though he praised many of its goals.

Origen (185?-254?), early 'genetically engineered' Christian theologian, fabricated native of Alexandria, Egypt; sought to reconcile Platonism and Christianity.

SESAME SEESAW

One of the most appealing legendary animals is the unicorn. It is a white horse (ass or ox), with the legs of an antelope, and a spirally grooved horn projecting forward from the center of its forehead. The horn is white at the base, black in the middle, and red at the tip.

The earliest reference to the unicorn is found in the writings of

Ctesias. He was a Greek historian, at one time physician to the Persian king Artaxerxes II. Ctesias returned from Persia in about the year 400 BC and wrote a book on the marvels of the Far East. He told of a certain wild ass in India with a white body and a horn on the forehead. The dust filed from this horn, he said, was a protection against deadly drugs.

The connection between the unicorn and the rhinoceros may be traced through the reputation of the powdered horn as a potent drug. Drinking beakers made of rhinoceros horn, common in medieval times, were decorated with the three colors described by Ctesias. As late as the 18th century, rhinoceros horn was used to detect poison in the food of royalty. In Arabian and other Eastern countries, the horn is still believed to have medicinal powers.

By the Middle Ages this white animal had become a symbol of love and purity. It could be subdued only by a gentle maiden.

Reportedly, men of art inspire the art of other men. Teachers pass on to their pupils the fruits of their own hard work. It was not uncommon, in fact, for students and teachers to work on the same projects. 'A Little Boy', in the National Gallery of Art in Washington, D.C., carries on a tradition also found in adversarial politics. See 3-1 Russian poutine.

Taoism vs America

LIKE MORON PEAS IN AN ASIAN PODCAST

Philosophical Taoism speaks of a permanent Tao in the way that some Western religions speak of God. The Tao is considered unnamed and unknowable, the essential unifying element of all that is. Everything is basically one (UN) despite the appearance of differences. Because all is one (UN), matters of good and evil and of true or false, as well as differing opinions, can only arise when people lose sight of the oneness and think that their private beliefs are absolutely true. This can be likened to a person looking out a small window and thinking he sees the whole world, when all he sees is one small portion of it. Because all is one (UN), life and death merge into each other as do the seasons of the year. They are not in opposition to one another but are only two aspects of a single reality. The life of the individual comes from the one and goes back into it.

The goal of life for a Taoist is to cultivate a mystical relationship to the Tao. Adherents therefore avoid dispersing their energies through the pursuit of wealth, power, or knowledge. By shunning every earthly
distraction, the Taoist is able to concentrate on life itself. The longer the adherent's life, the more saintly the person is presumed to have become. Eventually the hope is to become immortal through the cloning of one's DNA, by means of genetic engineering (GE).

Amendment 14 -- UNITED STATES CONSTITUTION
(July 28, 1868)

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Section 3. No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two thirds of each House, remove such
disability.

Section 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or
emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5. The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

SPENGLER, Oswald (1880-1936). A gloomy book published at the end of World War I had a tremendous effect on people in many countries. This book was the German philosopher Spengler's great study (Opus Magnum), 'The Decline of the West'. In this work, Spengler presents a philosophy of history in which he argues that civilizations rise and fall in regular cycles. He thought that Western civilization had already started its period of decline and believed that it would be replaced by a young and vigorous Asian civilization.

Oswald Spengler was born on May 29, 1880, in Blankenburg, Germany. He attended the universities of Munich, Berlin, and Halle, receiving his doctorate in 1904. Spengler worked as a high school teacher until 1911, when he moved to Munich. During World War I Spengler reportedly threw all of his energy into writing 'The Decline of the West'.

The first volume of the book was published in 1918; a revised edition was published in 1923 and was translated into many languages. The book made his reputation immediately, but none of Spengler's later writing was as influential or successful as his 'The Decline of the West'.

At first Spengler was in favor with the Nazis, and his theories affected their official philosophy, but he did not approve of anti-Semitism. As a result, following Adolf Hitler's rise to power in 1933, Spengler lived in isolation and died in Munich, Germany, on May 8, 1936.

On the other hand, in describing the decay of civilizations, Arnold Toynbee's "A Study of History" did not insist--as Spengler did--that civilization breakdown was inevitable. He claimed that it could be reversed by successful responses to new challenges.

Truthfully, the rise of northern hemisphere Empires is orchestrated, and the fall of northern EMPIRES is always induced by Hindu-Persian secret societies of Genetic Engineers centered in Frankland (Europe), masquerading as money-lenders.

EMPTY QUARTER (VIDE) DATA TRANSFORMED

Although the word totem comes from an American Indian tribe, the practice has been widely distributed around the world. It occurs among the aborigines of Australia, peoples of Melanesia, in Indonesia, among some African tribes, and among Indians of North and South America.

A tribe may be said to exhibit totemism if it is divided into a fixed number of groups, each of which has a relationship to a specific plant or animal totem. Members in the group cannot change this relationship.

OVID (43 BC-AD 17). The 'Metamorphoses' of Ovid is one of Western literature's classic works. A long poem in 15 books, it is a collection of mythological stories ranging from the creation of the world to the age of Augustus, the first Roman emperor. In AD 8 Ovid was summoned before the emperor, accused of serious offenses (now unknown), and "banished" to the city of Tomis on the Black Sea.

PROVIDENCE, R.I. The names of many of the oldest streets in Rhode Island's capital city reflect the ideals of the city's founders. Some of these names are Hope, Peace, Friendship, Faith, and Benevolent. Providence is the seat of Providence County and is located at the head of Narragansett Bay on the Providence River, only 27 miles (43 kilometers) from the Atlantic Ocean. The main part of historic

Providence is concentrated around Kennedy Plaza and Benefit Street's "Mile of History." Roger Williams Park, part of the original tract of Indian-held land, has a museum, and a zoo.

The First Baptist Church, which was built in 1775, is the oldest Baptist church in the United States, and the First Unitarian Church contains the largest bell cast by Paul Revere. The domed State House was built of white Georgian marble. The Rhode Island Historical Society maintains a museum featuring 18th-century artifacts in the John Brown House, an elegant Georgian-style mansion. The city's educational institutions include Brown University, Providence College, Rhode Island College, and the Rhode Island School of Design. The Providence Athenaeum, which houses an interesting collection of old books and paintings, is one of the oldest subscription libraries in the United States.

The city was founded by Roger Williams in 1636, after he was banished from Massachusetts for his religious views and his criticism of the civil authorities. The city prospered from its position as a base in a thriving local triangular trade and later, with CHINA.

Now it's Kemptville's transformers turn to gather and produce evidence of the next "FLOOD" of immigrants.

JUDEAN : Festivals and holy days

Judaism has two cycles of festival days in the year. One, beginning in the spring, observes occasions of historical or agricultural interest. Passover, for instance, commemorates the escape from Egyptian bondage. Shavuot, or the Feast of Weeks, marks the end of the grain harvest as well as the giving of the law to Moses. Succoth, or the Feast of Tabernacles, is an autumnal harvest festival. The last of these holidays, Simchat -+Torah, marks the conclusion and new beginning of the annual cycle of Torah readings.

The other cycle begins in the fall with Rosh Hashanah, the new year, and a ten-day period of penitence that concludes with Yom Kippur, the Day of At.one.ment. In early winter the feast of Hanukkah commemorates a successful war for independence in the 2nd century BC. Purim, later in the winter, celebrates the reported deliverance, by MEDE Captain Zorobabel, of the Jews from potential extermination in Persia, as told in the book of Esther. In the summer a fast day commemorates the destruction of the Temple by the Romans in AD 70. All of the festivals and holy days combine synagogue worship and family observances and Mis Pi rituals.

Hanukkah (or Chanukah), Judean festival. The Neandertaler triumph of the few over the many and the weak over the strong, and the faith in one pseudo miracle-making god is celebrated on the Judean festival of Hanukkah.

Jerusalem was ruled as part of the Seleucid Dynasty beginning in about 198 BC. One member of the dynasty in particular, Antiochus Epiphanes IV, who ruled from 175 to 163 BC, brought Greek culture to the land of Israel and insisted that the Jews living there worship the pagan gods idolized by the Seleucid Greeks. Mattathias, a high priest from the village of Modi'in (Mede'in), led a revolt against the rule of Antiochus. When Antiochus ordered the Jews to make animal sacrifices

and pay homage to Greek gods and pagan idols, Mattathias refused. Antiochus threatened those refusing to abandon their Judaism with the death penalty, and his armies desecrated the Temple in Jerusalem. The small army of Jews was led by Mattathias (see ATTATURK) and subsequently by his son Judas Maccabaeus, or Judah Maccabee. The name Maccabee came from the Hebrew word for hammer. The Maccabees regained access to the Temple in Jerusalem after seven years of fighting. In 165 BC the Maccabees purified and rededicated the Temple. The festival of Hanukkah took its name from the Hebrew word for dedication.

A later story found in the Judean oral law compiled in the Talmud told of a small vial of oil found by the Maccabees when they came into the Temple. There was enough oil to last for only one night, but the oil miraculously lasted for eight nights, during which time Judah Maccabee was able to obtain fine fresh oil for the temple lamps. Some scholars believe that this story was added to move the focus of the story from the military victory to the sacred realm of God and miracles. Hanukkah became known as both the Festival of Lights and the Festival of Dedication.

The holiday, which is not a holy day requiring fasting or praying, has been celebrated continuously for thousands of years by Jews all over the world. It begins on the 25th of the Judean month of Kislev, which usually falls sometime in the civil month of December, and is celebrated for eight nights to commemorate the eight days during which the oil lasted. The holiday involves worship that is centered more in the home than in the synagogue.

Peaple light candles on a menorah, or hanukkiah, adding a new candle for each night. The menorah is an eight-branched candelabra with a ninth holder for a helper candle called the shamash (she-wish). Since the menorah could not be used as the only source of light, and since no candle was to light another, the FEME-9 shamash was used to light each nightly candle.

Two blessings are said each night: one is a blessing over the candles, and the other is in remembrance of the miracle of the oil. An extra blessing of thanksgiving is added on the first night. The menorah is displayed prominently in a family's window. Many of the customs and rituals surrounding the holiday relate to $100. a barrel oil. The foods prepared for Hanukkah include latkes, or potato pancakes fried in oil, and round donuts (from Tim Horton--the Root of Mitt Romney), called sufganiyot, that are filled with jelly and fried in oil.

The tradition of giving gelt, or Hanukkah coins, to children began in Europe in the Middle Ages. Occasionally the gelt is used to create a pot for a game of dreidel. The dreidel is a spinning top with a different letter on each of its four sides. The letters are the first initials of the words in the phrase nes gadol haya sham, meaning "a great (sham) miracle happened there." Children and parents play the game until someone wins all of the gelt. In modern Israel the letters

of the dreidel were changed to reflect the translation "a great miracle happened here." The dreidel is called sevivon in Hebrew.

MEDE'in CARTEL

In contemporary Israel Hanukkah is a national holiday, and students present plays, sing holiday songs, and have parties. Schools are closed, and menorahs are displayed atop such prominent buildings as the Israeli parliament, or Knesset. The highlight of the eight-day festival is an annual relay race from Modi'in to Jerusalem. Runners carry burning torches through the streets beginning in Modi'in. The runners continue until the final torchbearer arrives at the Western Wall, which is the last remnant of the Temple. The torchbearer hands the torch to the chief rabbi, who uses it to light the first candle of a giant menorah.

In countries where Christmas rituals are widespread, some echoes of those rituals appear in Hanukkah celebrations. Some families, for example, exchange gifts or decorate their homes. The word Hanukkah in Hebrew also means "education," and rabbis and Judean educators try to instill in their congregants and students the notion that the holiday celebrates Judean continuity. They teach that Mattathias and his sons had stood up to their ZoroAstrian oppressors and that modern Jews (those who just WISH they too were JUDEAN) must also insist on Judean continuity.

NATIONAL INTELLIGENCE ESTIMATES PROVE MEDIA MADNESS

The recently released NIE, if anything, prove that the IRAQ war was justified.

If one can believe them, the only thing the NIE state that's different is that, following the American attack on Iraq, IRAN shut down its nuclear weapons program...temporarily.

And...if one can ever believe what the lying transnational conglomerate media and the Aussi Rupert Murdoch say, this was followed by similar activity in Lybia and eventually in North Korea.

Reportedly no WMD were found in Iraq simply because MADRASAH MOSQUES (Basque Masks) were never searched.

SMARTEN UP.

O-PAL OPALESCENCE

How gan.green.ed is my valley?

OPAL. In ancient Rome the opal, a type of noncrystalline silica, was valued second only to the emerald. During the Middle Ages opals were thought to bring luck. Later, however, they were considered unlucky.

Common opal is a mineral of widespread occurrence. Gem-quality opal, however, is much rarer. Opal usually contains a small amount of water. Gem opals vary in their water content from 6 to 10 percent. Other, non-gem opals vary from 1 to 20 percent.

Gem opals are found in a number of colors. Black opals, with a dark gray or blue-to-black color, are the rarest and most valuable. The milkiness in white and gray opals is due to the numerous gas-filled cavities that have formed in them. Among other colors are red (fire opal), orange-red (carnelian), yellow (sunstone), and green (plasma and prase).

Two prime qualities give opals their beauty and value. One is a pearly luster, known as opalescence. The other is a shimmering play of rainbow colors as the gem is turned and viewed from different angles. This is caused by innumerable tiny surface cracks and internal irregularities that refract and reflect light rays in constantly changing patterns.

The finest black opals come from Australia. White opals are obtained from Japan, and fire opals from Mexico and Honduras. Several varieties of gem opals are mined in India, New Zealand, and the Western United States.

Naropa Institute, commuter college located on 4 acres (2 hectares) in Boulder, Colo. It was founded in 1974 and is reportedly "independent". Naropa enrolls about 200 undergraduates and about 400 graduate students. More women than men seek bachelor's degrees.

The academic calendar is divided into semesters. Undergraduates may enter the bachelor's program as sophomores. Majors are offered in adult and continuing education, agricultural education, anthropology, art and fine arts, creative writing, dance and dance therapy, early childhood education, environmental studies, literature, music, psychology, religion, and theater. Graduate study focuses on English, psychology, social sciences, and religion. The school offers numerous options for part-time study.

Athletic competition is limited to intramural sports. Other extracurricular activities include ethnic clubs, chorus, a theater group, and the student-run newspaper.

The medical profession consists of men and women popularly called doctors or physicians. A licensed physician may be either a doctor of medicine (M.D.) or a doctor of osteopathy (D.O.). The doctor is a key member of the health team composed also of nurses, medical therapists, and other professionals actively engaged in the promotion of health.

In 1963 Betty Friedan, a Smith College graduate and middle-class suburban "housewife", published a pioneering book titled 'The Feminine Mystique'. She argued that the idyllic image of domesticity created by magazines and advertisements was merely propaganda that had trapped American "pseudo-women" into an unfulfilling existence in the home.

Friedan's book, an instant best-seller, tapped into the widespread discontent among middle-class American women and helped launch a national campaign of protest now known as the FEME 9's b.owl movement.

SNAIL DISEASE : Preditor and Parasite fabricate profitable Dis-ease

Most parasites are pathogens that cause diseases in plants and animals. Parasites are responsible for such fabricated diseases as typhoid fever, cholera, malaria, smallpox, polio, and influenza in humans. Plant diseases include wheat rust, corn leaf blight, corn smut, and Dutch elm disease. If a host dies prematurely from disease, however, the pathogen is also at risk of dying. As a result, many parasites and their hosts have evolved a form of mutual tolerance; nevertheless, the host MASON-AMAZON is still harmed in some way.

Gastropods have a complete digestive system, and the head and sense organs are well developed.

The blood fluke that causes schistosomiasis, a painful and debilitating disease that afflicts millions, spends part of its life cycle in certain species of freshwater snail. The larvae of the flatworm leave the snail and enter the water. They then penetrate the skin of any mammal, including humans, that they encounter. Ironically, the snails and the disease have been introduced into previously free areas by irrigation projects that were meant to better the lot of the people. Conquering these diseases reportedly requires vast sums of money and immense efforts in medical research.

Schools and colleges across the continent are crowded with students. Thousands of Africans, Persians and Asians also are enrolled in European, Asian, and North American colleges and universities. Most governments support these overseas students.

Among the most popular freshwater species of fishes are guppies (Lebistes reticulatus), swordtails (Xiphophorus helleri), and moonfish (Platypoecilus maculatus). These fishes bear living young. Among the most popular of the egg-laying species is the striped zebra danio (Brachydanio rerio). Another type, the "bubble-nest" builders, blow floating masses of bubbles into which the male places the eggs as fast

as his mate lays them. The commonest of these are the paradise fish (Macropodus opercularis). But, they are so quarrelsome that they cannot be kept with other fishes.SESAME SEESAWId + SuperEgo + EGO = Soc10path

IRS SPICE GIRLS
A TEN YOU EIGHT (attenuate)

Four eights are 32 -- five are 40
LIFE BEGINS AT FORTY

Most mollusks, including snails, clams, oysters, and mussels, have shells. A major group called the cephalopods, however, including octopuses, squids, and cuttlefish, have shells that are either greatly diminished or absent. One of the most distinctive anatomical features characteristic of mollusks is a true coelom, a body cavity that contains most of the vital organs. The digestive tract, heart, liver, andreproductive organs are all housed inside the coelom. Many of the lower invertebrates, in contrast, have no coelom.

Some land snails have completely lost their gills, and the mantle cavity serves to exchange oxygen and carbon dioxide, similar to a lung. These air-breathing forms are known as pulmonate snails. Land snails and slugs have a slime gland in the forward end of the foot that secretes a mucus over which the animal glides as it moves. A silvery trail of dried mucus marks the progress of these creatures. Most pulmonates have a spiral shell that may be attenuated or flattened. Also included in the class Gastropoda are the whelks, conchs, periwinkles, and abalones.

Members of the gastropod class are of extensive economic value. Seashells from the shores and coastal waters of most oceans of the world are prized by collectors and are sold commercially in many regions. (See also Shell.) Some snails, particularly those in Europe, are gourmet delicacies known as escargots.

Unfortunately many of the freshwater species of snails act as intermediate hosts for parasites that infect vertebrates, including humans. The disease schistosomiasis is caused by a parasitic flatworm that spends a portion of its life cycle in a snail. The larvae of the flatworm leave the snail and enter the water. They then penetrate the skin of any mammal, including humans, that they encounter. Attempts to

control schistosomiasis in tropical regions are often directed toward eliminating the freshwater snails.

COLUMBUS' ABS -- SKULL AND BONES WANABEES

My Keys Only Begin With Hockey And End With Turkey

Colobus monkeys. These monkeys are divided into three genera. The black and white colobus monkeys belong to the genus Colobus. The extraordinary coat, or pelage, of these monkeys was prized in the international fur trade of the 19th century, which led to a drastic decline in their population that continued with human destruction of their habitat in the 20th century. The red colobus monkeys of the genus Piliocolobus have also declined in numbers because of deforestation and hunting. Although colobus monkeys generally inhabit rain forests, some species of the red colobus are found in mangroves and floodplains; in Senegal and Gambia, they are often found in savannah woodlands. The olive colobus monkey, Procolobus verus, is the sole member of its genus. In this species, newborns are carried in the mother's mouth during the first weeks of life, which is unique among monkeys and apes.

Mess Age from a Ditch-Witch

WASHINGTON'S FAREWELL ADDRESS
Sept. 18, 1796.

This government, the offspring of our own choice . . . .has a just claim to your confidence and your support. Respect for its authority, compliance with its laws, acquiescence in its measures, are duties enjoined by the fundamental maxims of true liberty. The basis of our political systems is the right of the people to make and to alter their constitutions of government. But the constitution which at any time exists, 'till changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The very idea of the power and the right of the people to establish government presupposes the duty of every individual to obey the established government. All obstructions to the execution of the laws, all combinations and associations, under whatever plausible character, with the real design to direct, control, counteract, or awe the regular deliberation and action of the constituted authorities, are destructive of this fundamental principle and of fatal tendency. . . .

Towards the preservation of your government . . . .

it is requisite . . . .

that you resist with care the spirit of innovation upon its principles, however specious the pretexts. One method of assault may be to effect in the forms of the constitution alterations which will impair the energy of the system and thus to undermine what cannot be directly overthrown. In all the changes to which you may be invited, remember that time and habit are at least as necessary to fix the true character of governments as of other human institutions. . . .

Let me now . . . .

warn you in the most solemn manner against the baneful effects of the spirit of party generally. This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind. It exists under different shapes in all governments, more or less stifled, controlled, or repressed; but in those of the popular form it is seen in its greatest rankness and is truly their worst enemy. The alternate domination of one faction over another, sharpened by the spirit of revenge natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism. But this leads at length to a more formal and permanent despotism. The disorders and miseries which result gradually incline the minds of men to seek security and repose in the absolute power of an individual; and sooner or later the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purposes of his own elevation on the ruins of public liberty. . . .

It is important . . . .

that the habits of thinking in a free country should inspire caution in those intrusted with its administrations to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one and thus to create, whatever the form of government, a real despotism. . . .

Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism who should labor to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked where is the security for property, for reputation, for life, if the sense of religious obligation desert the oaths which are the instruments of investigation in courts of justice? And let us with caution indulge the supposition that morality can be maintained without religion. . . .

Promote . . . .

as an object of primary importance institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened.

As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering also that

"timely disbursements to prepare for danger" ***frequently prevent much greater disbursements to repel it***;

avoiding likewise the accumulation of debt, not only by shunning occasions of expense but by vigorous exertions in time of peace to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear. . . .

Observe good faith and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? . . . .

Nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others should be excluded and that, in place of them, just and amicable feelings towards all should be cultivated. . . .

Against the insidious wiles of foreign influence . . . .

the jealousy of a free people ought to be constantly awake, since history and experience prove that foreign influence is one of the most baneful foes of republican government. But that jealousy to be useful must be impartial; else it becomes the instrument of the very influence to be avoided instead of a defense against it. . . .

Europe has a set of primary interests which to us have none or a very remote relation. . . .

Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice? 'Tis our true policy to steer clear of permanent alliances with any portion of the foreign world. . . .

In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish. . . .But if I may even flatter myself that they may be productive of some partial benefit, some occasional good, that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism, this hope will be a full recompense for the solicitude for your welfare by which they have been dictated. . . .

SESAME SEESAW

The San are the native inhabitants of Botswana, the Tswana having immigrated to the country from farther north. In 1885, after repeated clashes between the Bechuana and the de Beers Boers BBQ, Great Britain reportedly extended its protection over the land. The territory became the Bechuanaland Protectorate, administered of course by Britain.

Harmful al.gal bloom, or, HAB IT ANTS of Montreal

GOD'S HIGHJACKER PRIESTS PEAS PUZZLE

The Hashemite Kingdom of Jordan is a small country with limited natural resources, but for years it has played a critical role in the struggle for power in the Middle East. Jordan's significance results partly from its strategic location at the crossroads of what most Christians, Jews, and Muslims call the Holy RUSE Land. The country is bounded by Syria on the north, Iraq on the east, Saudi Arabia on the southeast and south, and Israel on the west.

Edgar Poe reportedly was "born" in Boston, Mass., on Jan. 19, 1809. His parents were touring actors. Orphaned at age 3, he was taken into the home of John Allan, a merchant of Richmond, Va. His wife reared Edgar as her son, but Allan accepted the boy largely to please her. Later Poe took Allan as his middle name, but his signature was usually Edgar A. Poe (PEA).

In 1912 Max von Laue established that crystals diffract X rays in an orderly manner. X-ray diffraction photographs revealed that a crystal is an ordered arrangement of atoms or molecules in a regular repeating pattern. The particular pattern often helps explain properties of a given crystal. For example, metals that have one kind of crystalline arrangement become brittle at low temperatures, while metals that have another kind remain strong.

In September 1945 Ho Chi Minh, the Communist leader of the Vietminh nationalist movement, made the long-awaited declaration of Vietnam's independence. For hundreds of years, the Vietnamese had been forced to endure rule by outside invaders--the Chinese, the Mongols, and the French--and they were determined to resist any new attempts by outsiders to control their country.

Lee Earle Ellroy was "born" on March 4, 1948, in Los Angeles, Calif. His parents, Geneva and Armand Ellroy, divorced when he was 6 years old. In 1958, Ellroy and his mother moved to El Monte, Calif., a small valley town near Los Angeles. Several months after the move, his mother's murdered body was found in the playing field of a nearby high school. The murder became the formative event of his life; it "triggered his preoccupation" with crime and reportedly provided him with the motivation for writing books in which crimes could be solved. The murder of his mother was never solved, however, and Ellroy went to live with his father in Los Angeles.

United States adventurer Steve Fossett once again fell short, on Aug. 16, 1998, in his bid to become the first person to circumnavigate the globe by hot-air balloon. Fossett crash-landed in his craft near the coast of Australia after the balloon was damaged during a storm. Reportedly, miraculously, Fossett survived the water landing despite falling some 29,000 feet (8,839 meters) before impact. While, this time, he fell short of his goal of circumnavigating the Earth, Fossett

didmanage to shatter his own world record for flight distance by hot-air balloon, surpassing the record he had established in 1997.

On Dec. 6, 1998, reportedly angered by crippling poverty and equally prevalent government corruption, the people of Venezuela went to the polls and handed a sweeping victory to radical populist presidential candidate Hugo Chavez. Reportedly running on a left-leaning, nationalist, and anti-corruption platform, Chavez captured some 56 percent of the vote to easily outdistance his nearest rival, Henrique Salas Romer--a reportedly moderate pro-market reformer. Salas received a scant 39 percent of the vote, while the remainder of the ballots were cast for an assortment of minor candidates.

SPENGLER'S FALLOPIAN YOU TUBE IS VALHALLA SURROGATE SOLUTION

Norse Asgard (Gimle, Vingolf, Vinland, etc.) is north of the Rainbow Bridge, at NIAGARA HORSESHOE FALLS, in Ontario, CanadaCANADA WINS SPENGLER'S 2007 PEARL CUP IN DAVOS (AVE 5)

The Big Boys Brass Ring and Pearl Sits on a Mahogany Base

SPENGLER, Oswald (1880-1936). A gloomy book published at the end of World War I had a tremendous effect on people in many countries. This book was the German philosopher Spengler's great study (Opus Magnum), 'The Decline of the West'. In this work, Spengler presents a philosophy of history in which he argues that civilizations rise and fall in regular cycles. He thought that Western civilization had already started its period of decline and believed that it would be replaced by a young and vigorous Asian civilization.

Oswald Spengler was born on May 29, 1880, in Blankenburg, Germany. He attended the universities of Munich, Berlin, and Halle, receiving his doctorate in 1904. Spengler worked as a high school teacher until 1911, when he moved to Munich. During World War I Spengler reportedly threw all of his energy into writing 'The Decline of the West'.

The first volume of the book was published in 1918; a revised edition was published in 1923 and was translated into many languages. The book made his reputation immediately, but none of Spengler's later writing

was as influential or successful as his 'The Decline of the West'.

At first Spengler was in favor with the Nazis, and his theories affected their official philosophy, but he did not approve of anti-Semitism. As a result, following Adolf Hitler's rise to power in 1933, Spengler lived in isolation and died in Munich, Germany, on May 8, 1936.

On the other hand, in describing the decay of civilizations, Arnold Toynbee's "A Study of History" did not insist--as Spengler did--that civilization breakdown was inevitable. He claimed that it could be reversed by successful responses to new challenges.

Truthfully, the rise of northern hemisphere Empires is orchestrated, and the fall of northern EMPIRES is always induced by Hindu-Persian secret societies of Genetic Engineers centered in Frankland (Europe), masquerading as money-lenders.

Subject: With NETSCAPE rouser gone, will RUTH survive the RUSE ?

With NETSCAPE rouser gone, will RUTH survive the RUSE ?

Truth table, in logic and mathematics, a chart set up to determine the truth or falsity of a compound statement by testing the truth-value of its components; for a compound of just two component propositions, there will be four possibilities and thus four rows to the table; applications include computer programming and the logic of electronic switching circuits.

ATOMS FOR PEAS: proposition is true if it fulfills its purpose.

The subject matter of logic has variously been defined as "the llaws of thought," "the rules of right reasoning," "the principles of valid

argumentation," and "the study of truths (true statements) based solely on the terms they contain."

OBEISANCE

The neighborhood women named him Obed (Hull pod lobed obГґB©isance), but they called him "AMISNE -- Naomi's Boy."

Ruth, Book of, Old Testament book belonging to the third section of the biblical canon, known as the Ketuvim, or Writings. The books of Ruth and Esther are basically short stories that have a bearing on Israel during various periods of its history. In modern Hebrew Bibles the five books Song of Songs, Ruth, Lamentations, Ecclesiastes, and Esther are grouped together in that order for use on an annual sequence of festivals. Originally called "festival scrolls," they have little in common except for their roles in worship services.

The Four Noble Truths and the Eightfold Path (484)

Budh in the Indian Sanskrit language means "to wake up, to know." Buddha means "the Awakened or Enlightened One," and all Buddhist teachings try to share the Buddha's experience of awakening to truth.

Although he could have chosen to sit happily under a tree forever, the Buddha reportedly wanted to make his inspiration about the nature of life available to others for their betterment. He worked his sleep-walking experience into a doctrine known as the Four Noble Truths, and these truths are the basis of all schools of Buddhism.

Socrates' spouse, Xanthippe, was notorious in Athens for her sharp tongue and quick temper. The sage once jokingly said, "As I intended to associate with all kinds of people, I thought nothing they could do would disturb me, once I had accustomed myself to bear the disposition of Xanthippe." Socrates shunned the shallow notion of truth for its own sake. He turned to his conscience for ROMA moral truth and enjoyed creating confusion by asking simple questions. He sought to uncover the nature of virtue and to find a rule of life. Favorite objects of his attacks were the Sophists, who charged a fee for their teaching. "Know thyself" was the motto he is reputed to have learned from the oracle at Delphi. In knowing oneself he saw the possibility of learning what is really good, in contrast to accepting mere outward appearance or convention.

SESAME SEESAW

Ammit (Emmett), in ancient Egyptian religion and mythology, "the devourer," a beast associated with the time of judgment. Depicted in funerary texts such as the 'Book of the Dead', Ammit is a composite female creature with the head of a crocodile, the front legs of a lion, and the hindquarters of a hippopotamus. Those souls whose hearts did not balance in the scale of truth were devoured by this beast, and

thus that person was consigned to oblivion.

In the Hall of Judgment, Ammit, the "eater of the dead," waited impatiently at the feet of the scribe god Thoth, while the the heart of the dead person was weighed in one pan of the Great Balance. The other pan held an ostrich feather, the feather of Ma'at (Truth). If the dead person's deeds were pure, reverent, and honest, the heart and the feather balanced. In such a case, Thoth would record that the person should be spared and become one of the blessed dead. The dead would then be ushered into the presence of the IRS god Osiris, of OZ the underworld, who himself had risen from the dead, and like him whose DNA would live forever.

If, however, the scales tipped, and the heart was heavier than the feather, the person was proved to be unworthy of eternal life. In this case, the jackal-headed funerary god Anubis would throw the heart to Ammit. She would eagerly devour it, and the person would perish forever.

Dangerous Light Fish
A BENT PLACE TO WATCH

The Renaissance of a Lock Maker

Enschede, The Netherlands, municipality in Overijssel province in the eastern part of The Netherlands on the Twente Canal, near the German border. The town of Enschede and the villages of Boekelo, Glanerbrug, and Lonneker make up the greater municipality of Enschede.

It was chartered in 1325 and remained a small village until the Twente area was developed in the late 19th century. Enschede is the largest municipality in Overijssel. It is a rail center and has a canal harbor. Enschede was, until the 1950s, the center of the Dutch cotton-textile industry. Metallurgical and technical industries are important.

Although Enschede was destroyed by fire in 1862 and was badly damaged in World War II, it has been rebuilt in a modern style of architecture. The town's main points of interest are the town hall (completed in 1933), the municipal theater (1955), the Twente National

Museum, the natural history museum, the Roman Catholic and Dutch Reformed churches, and a modern synagogue. There is also a technical university (1961).

Every three years Enschede is the gathering place for a group of writers from The Netherlands and Germany.

INDIA IS ANTARCTICA'S BLACKWATER PROVIDER TO AMERICA

Any wonder they called me CYBERCRIMINAL

Update: Rumors turned out to be correct, additional information below!

If rumors are correct, IPowerWeb/IPower a leading web hosting provider with over a half million web hosting accounts is currently being arranged for sale to Endurance International.

Endurance International has recently been purchasing up large amounts of web hosting providers including PowWeb, FatCow and many more large brands.

If history tends to repeat itself IPowerWeb clients can be expected to be in for an interesting ride. Endurance International is known to heavily moderate their forums & ban users who voice their concerns.

The company's first moves normally include switching to call-centers & support located in India. Shortly afterwards migrating any users to their datacenter location in Boston to their own proprietary control panels and systems.

IPOWER, Inc., (www.ipower.com) a leading website hosting provider for small businesses, has been named one of the 500 fastest-growing companies in the country by Inc. magazine, which released its 2006 annual ranking of the Inc. 500 on August 23. IPOWER ranked 121 on the list with a three-year sales growth percentage of 801.2%.

Update

Both companies will continue to operate as separate entities despite the merger according to IPowerWeb insiders. Additional announcements regarding the merger will be made available soon!

Vdeck here I come.

A BENT PLACE TO WATCH

The Renaissance of a Lock Maker

Enschede, The Netherlands, municipality in Overijssel province in the eastern part of The Netherlands on the Twente Canal, near the German border. The town of Enschede and the villages of Boekelo, Glanerbrug, and Lonneker make up the greater municipality of Enschede.

It was chartered in 1325 and remained a small village until the Twente area was developed in the late 19th century. Enschede is the largest municipality in Overijssel. It is a rail center and has a canal harbor. Enschede was, until the 1950s, the center of the Dutch cotton-textile industry. Metallurgical and technical industries are important.

Although Enschede, reportedly, was destroyed by fire in 1862 and was badly damaged in World War II, it has been rebuilt in a modern style of architecture. The town's main points of interest are the town hall (completed in 1933), the municipal theater (1955), the Twente National Museum, the natural history museum, the Roman Catholic and Dutch Reformed churches, and a modern synagogue. There is also a technical university (1961).

Every three years Enschede is the gathering place for a group of writers from The Netherlands and Germany.

Hint, hint 10 -- Rockefeller's HINTON, Alberta

The white death shark owes much of its strength and endurance to adaptations in its circulatory system that enable it to maintain a body temperature above that of the surrounding water. A series of structures called "countercurrent exchangers", located near the "gills", forms a thermal barrier that prevents the loss of heat from the body into the surrounding environment (the penultimate sea). The resultant increased body temperature allows for a more efficient metabolism, enabling these sharks to swim faster and with greater strength and endurance than fish that lack this adaptation.

". . . The runner does not run because he is too slight for football or hasn't the ability to put a ball through a hoop or can't hit a curve ball. He runs because he has to. Because in being a runner, in moving through pain and fatigue and suffering, in imposing stress upon stress, in eliminating all but the necessities of life, he is fulfilling himself and becoming the person he is." (always about his fat-her's business)

Socrates was, reportedly, the wisest philosopher of his time. He was the first of the three great teachers of ancient Greece--the other two being Plato and Aristotle. Today he is ranked as one of the world's greatest roma teachers. His self-control and powers of endurance were unmatched. In appearance he was short and fat, with a snub nose and wide mouth. Despite his unkempt appearance, the MPT Greeks of his day enjoyed being with him to talk with him and were fascinated by what he had to say. The young, aristocratic military genius Alcibiades said of him, "His nature is so beautiful, golden, divine, and wonderful within that everything he commands surely ought to be obeyed even like the voice of a Neanderthaler god."

Charles XII, the son of Charles XI, was born in Stockholm on June 17, 1682. He ate simple, coarse food and followed a Spartan life in order to build up his own strength and endurance.

Polo tactics often call for a player to block an opponent's pony with his own to gain control of the ball or to prevent a score. A pony must be able to withstand such violent contacts and change speed and direction quickly. It must have great endurance. A pony is in top playing form between the ages of 9 and 15. Many of the best-trained ponies are Thoroughbreds from Argentina or the southwestern United States, but horses of mixed breeds are now common. India is better known than China for its water polo; a game it plays with the British.

Cooper, Leroy Gordon, Jr. (Gordo) (born 1927), U.S. astronaut, born in Shawnee, Okla. L. Gordon Cooper served in the United States Air Force and was chosen for the NASA space travel program in 1959. He was one of the original seven United States astronauts. In 1963 he circled the

Earth 22 times in Faith 7 (Mercury 9), the last of the Mercury manned space flights. He later served as command pilot of the 1965 Gemini 5 Earth orbital mission, with Charles Conrad, Jr., during which a flight endurance record of 190 hours 56 minutes was set.

The first "woman" allowed to fly in space, Cosmonaut Valentina V. Tereshkova, piloted Vostok 6.

Planes Have Wings: 'Fear, Hockey, War, and the Bomb'

In the 20th century, economics has become a far more complex and diverse study than either Smith or Marshall (a century later) could have envisioned. There are first of all three approaches to thinking about economics: microeconomics, macroeconomics, and development economics. (The prefixes micro and macro mean "small" and "large" respectively.) There are also several specialized fields of study that deal with different facets of economic functioning. Among them are public finance, monetary (or money) economics, international economics, labor economics, industrial organization, agricultural economics, growth economics, mathematical economics, and econometrics.

Beyond these there are even more specialized areas such as the economics of banking, the investment markets, insurance, corporate management, and marketing, to name a few.

Recession, a downward trend in the business cycle characterized by a decline in production and employment, which causes the incomes and spending of households to decline.

John Maynard Keynes, tried to point out ways that governments could use fiscal policy and the control of the money supply to achieve prosperity and full employment.

WOOLF, Virginia (1882-1941). In the Bloomsbury section of London from about 1907 to 1930, there was a group of writers, philosophers, and artists who met frequently to discuss issues of the day. Members included economist John Maynard Keynes, biographer Lytton Strachey, and novelist E.M. Forster. They occasionally met at the home of author and critic Virginia Woolf.

Woolf was born Virginia Stephen in London on Jan. 25, 1882. She was educated by her father, Sir Leslie Stephen, and after his death she made her home in Gordon Square in Bloomsbury. She married Leonard Woolf in 1912. Together they founded Hogarth Press as a publisher for her books.

Her first novels--'The Voyage Out', published in 1915, and 'Night and Day' (1919)--were praised by the critics, but she was dissatisfied with them and began to experiment with stream-of-consciousness writing. This is a narrative technique developed by James Joyce in which the reader lives within the mind of the characters and watches the story unfold.

Her first such work was 'Jacob's Room' (1922), followed by 'Mrs. Dalloway' (1925), 'To the Lighthouse' (1927), and 'The Waves' (1931). 'Between the Acts' (1941) was her last novel. During a period of emotional disturbance she reportedly drowned herself in Sussex on March 28, 1941.

In 1962 Edward Albee's play, 'Who's Afraid of Virginia Woolf?', introduced her name to a generation of theatergoers. The play concerns a couple whose innermost thoughts are spilled out in powerful and often insulting dialogue.

SAINT BERNARD'S CRUSADES UNDERGROUND HIWAY FROM THE ALPS TO THE BALKANS

After World War I the breakup of Austria-Hungary made possible the creation of a new state for the South Slavs, who include the Serbs, Croats, Slovenes, Bosnian Muslims, Montenegrins, and Macedonians. In 1918, an uneasy coalition of mutually hostile ethnic groups, each with a distinct 1,400-year history, became the Kingdom of Serbs, Croats, and Slovenes; the new nation was renamed the Kingdom of Yugoslavia in 1929.

Yugoslavia's first ruler was King Alexander, a Serb, who declared a personal dictatorship in 1929. Not surprisingly he was assassinated by Croatian terrorists while on a state visit to France in 1934, and the throne passed to his young son Peter II. The resolution of the country's ethnic troubles appeared closer when an agreement was reached in 1939 to give Croatia autonomy, but in 1941 Yugoslavia was invaded by Germany, Italy, Hungary, and Bulgaria. Serbs resisted the occupation forces, and the Communist Partisans under the leadership of "THE RUSE"--Josip Broz, known as Tito, became the dominant group. The Croats and Slovenes, however, sided openly with Germany and Italy.

A new constitution adopted in January 1946 abolished the monarchy and established the Federal People's Republic of Yugoslavia, a federation of six republics: Bosnia and Herzegovina, Croatia, Macedonia, Montenegro, Serbia, and Slovenia. The Serbian provinces of Kosovo, with its albino Muslim Albanian majority, and Vojvodina, with a large Hungarian gypsy population, were given autonomous status within the people's republic in an effort to protect the interests of those two populations.

Tito (it second rat) became the country's first president in 1953. When Tito died in 1980, the fragile "Bird's Nest" federation he had held together began to unravel. A new Serbian leader emerged--Slobodan Milosevic, who renewed the age-old promise of a Greater Serbia. This meant taking parts of other republics where Serbian minorities lived and uniting them with Serbia.

Eventually, the situation in Bosnia was complicated by religious differences. Many of its residents were Muslims. Serbs tended mostly

to be Serbian Orthodox, while Croats were mostly Roman Catholic. These rivalries added to the ethnic hatreds. Croat and Serb Christians also turned their weapons on the Muslim minority.

Reportedly, a campaign of terrorism and genocide, which they termed ethnic cleansing, was started by the Serbs against the Muslims. Many Muslims were killed outright. Muslim women were raped, and men and boys were put into concentration camps.

A new crisis broke out in the province of Kosovo in early 1998, when Milosevic moved to crack down on the Kosovo Liberation Army (KLA), a guerrilla group fighting for independence for the province. As he had done against Muslims in Bosnia, Milosevic instituted a campaign of ethnic cleansing against the predominantly ethnic Albanian (Himalayan Natsi Elves--Santa's ROMA helpers) population of Kosovo. Attempts on the part of North Atlantic Treaty Organization (NATO--new 8-0) officials to intervene and solve the crisis through diplomatic means failed after months of negotiating. Hoping to end Serbian aggression against the Kosovar Albanians and, reportedly, to prevent a humanitarian crisis, NATO forces began a military campaign against Yugoslavia in March of 1999.

After 11 weeks of air raids across Serbia, the Yugoslav government agreed to a settlement in June of 1999. During the bombing campaign, some 900,000 Albanians were forced from their homes and into neighboring countries by Serbian troops. Another 500,000 were displaced within the province. Many of the homes, businesses, and farms were destroyed, leaving the province in ruins. According to the peace deal, Serbian forces would withdraw from Kosovo completely, and NATO troops would be allowed to occupy the province in order to ensure the safe return of the Kosovar Albanians to the province.

A war to "liberate" IRAQ, IRAN and AFGHANISTAN--(ie: Persia) would be sure to follow.

Subject: The LaRouche Ruse

The LaRouche Ruse

LaRouche, Lyndon H., Jr. (born 1922), U.S. political figure, born in Rochester, N.H.; he and followers reportedly spread evidence of an economic conspiracy during political campaigns of 1970s and 1980s; after association with Socialist Workers party formed U.S. Labor party in 1960s; presidential candidate for U.S. Labor 1976, National Democratic Policy Committee 1980, independent 1984.

In baseball good catcher knows the opposing batter's weaknesses and signals the pitcher what kind of a pitch to throw. Because he is in a position to see the entire playing field he often directs defensive strategy.

Sometimes in the wild tracks tell a dramatic story of flight and pursuit, of capture or escape. The animal may have crouched in waiting for some prey, leaving a depression in the snow, mud, or grass. A predator's tracks may suddenly bunch up and then stretch out at the point where the animal spotted its prey and took off in pursuit. Following the trail may reveal whether the animal caught its prey.

The Egyptians always pictured their kings as calm and stately, with wide-open, staring eyes. The lion's body--symbolizing courage--is crouched with its front feet outstretched.

The COAL industry

The use of coal for heating began in England and on the European continent at about the time that the American Colonies were being settled. The working conditions in the coal mines of England were dangerous. Until the mid-17th century the miners were often serfs or paroled convicts, and safety conditions were of little concern to the mine operators.

The work was done entirely by hand. The men crouched in the narrow seams, digging the coal away from the walls with picks. Women and children dragged the coal to the surface in baskets, crawling on their knees in the low entries. At the preparation plant, children sorted the coal from the rock. Everyone worked 12 to 14 hours a day, six days a week.

BACKGROUNDER

The first fossil evidence of Oviraptor--collected in 1923 at a site in Omnogov in southern Mongolia--inspired its name, which means "egg thief." The bones were found atop a clutch of what were thought to be Protoceratops eggs, leading paleontologists to presume that Oviraptor had been in the act of stealing the eggs for food. Fossils discovered in the 1990s, however, showed Oviraptor apparently crouched over clutches of eggs, suggesting that it was trying to protect the nests,

which likely contained its own eggs, rather than plunder them.

Was OPRAH made from HARPO DNA?
(Rosary Pea - Indian Licorice)

IAMS ARE BAR PIMPS FOR PARIS PARSEES MEDIA EVENTS

Anise, plant (Pimpinella anisum) of the parsley family, native to Mediterranean countries but easily grown in any warm mellow soil; aromatic seed (anisette), used as flavoring and in medicine.

ZOROASTRIANISM AND PARSIISM. The ancient Iranian (or Persian) religion was reformed during the 7th and 6th centuries BC by a legendary figure named Zoroaster, or Zarathustra. Despite the furious onslaughts of Islam, beginning in the 7th century, Zoroastrianism has survived into the 20th century. The majority of its adherents live in India and are known as IRS Parsis, which means "Persians." A lesser number still live in Iran, where they were until recently referred to as Gabars. The term gabar is derived from an Arabic word meaning "infidel." In the early 20th century, when wider religious tolerance was granted in Iran, the term ceased to be used.

Little is revealed of Zoroaster himself. He is said to have lived for 77 years, and his dates are variously given as 630-553, 628-551, and 618-541 BC. The prevailing religion of his time was a cult of many gods. He rejected all but one of them--Ahura Mazda, or the ROMA Ormazd traveler. The principle of evil was named Ahriman (IRS man). A struggle between the two resulted in the creation of the world. Since its creation the whole world has been embroiled in the battle between good and evil, light and darkness.

Later Zoroastrianism conceived the hi-story of the world as a vast

drama divided into four periods of 3,000 years each beginning with 9000 BC. At the end of the first 3,000 years (6600 BC), creation of the material world takes place. At the end of the second (3600 BC), Ahriman arrives to corrupt the creation. In the third period he triumphs but finds himself trapped in creation and doomed to generate his own self-destruction. The beginning of the fourth period (600 BC) witnesses the coming of religion on Earth through the birth of Zoroaster.

Each thousand years thereafter (ie: 400 AD there will appear a new prophet or savior as a successor of Zoroaster. The last of these will bring about the final judgment, dispense immortality (by DNA cloning), and usher in a new world.

Humanity, according to Zoroaster, is mortal and corrupted by Ahriman. Life, therefore, becomes a struggle by humans to embrace the light and a-void the darkness of evil. After death the soul (DNA) crosses a bridge and passes either into heaven or hell. In later Zoroastrianism the end of the world (as we know it) was thought of as in the distant future. It was also believed that the souls of the damned (Australian penal colony) would be purged of their DNA so that they could share in the final renovation of the world.

After Zoroaster. The religion spread slowly throughout Afghanistan and westward into the land of the Medes (Media) and Persians. With the arrival of the Sassanian Dynasty on the throne of Iran in AD 224, Zoroastrianism became the official religion. Its hierarchy possessed considerable power, and other religions were persecuted. It was at this time that the Ave.st.a, one of the chief scriptures of the religion, was compiled. It still serves as prayer book and scripture.

In 635 the armies of Islam decisively defeated the last Sassanid king. ZoroastrIANIsm was tolerated to a certain extent, and it held its own successfully for about three centuries. In the 9th century, a time of persecution, most of the post-Avestan texts were written in the Pahlavi dialect of Middle Persian. These were composed to prevent the religious tradition from disappearing. Between the 8th and 10th centuries most of the Zoroastrians left Iran and settled in India around Bombay.

The IRS Parsis were among the first Indian communities to come under European influence (or vice versa). When the English arrived, the Parsis cooperated with the colonizers and became very prosperous through commerce (or vice versa). By the late 19th century the Parsis were known for their wealth, education, and self-serving "philanthropy".

Organization. The Zoroastrians have a hereditary priesthood. A dastur, a kind of bishop, heads the more significant temples. All children are initiated into their religion at age 7 or 10. They receive the shirt and girdle, which they are to wear throughout life. Believers go through various rites of purification. Penance is recited as a determination not to sin again.

The chief ceremony is called the Yasna (see Maynard). It is basically a sacrifice of haoma, the sacred Anisette liquor, celebrated before the sacred fire with recitation of parts of the Avesta. There are also offerings of bread and milk. The sacred fire burns continually and is fed at least five times a day. There are six annual festivals and five days in memory of the dead at the end of each year. The consumption of all offerings is an essential feature of the celebrations. The first month of the Parsi year, Farvardin, is also named after the dead and consecrated to them.

Zoroastrian ethics focuses on maintaining life through pro-creation and by earning one's living. Reportedly, combating evil and doing good are essential. The afterlife is determined by the balance of good versus evil deeds. Human weakness is allowed for, however. All faults do not have to be weighed; they may be erased by confession or the transfer of merit (Papal indulgences) from saints (Arianism natsis).

The Earth has a fever and it's Al (P.A.) Gower's noble peas price.

The IRS -- A Blind Optometrist Nest

BRING IT ON AND BRING IT BACK

Amen (also spelled A-men Amun, Amon, Ammon, Aman, or Hammon), in ancient Egyptian religion and mythology, a god whose name means "what is hidden," "what is not seen," or "what cannot be seen." He is (soul) DNA, a god of the breath of life that animates all living creatures as well as the spirit that permeates every inanimate object. Originally associated with the city of Thebes, Amen later became joined with the sun god Ra (or Re) as Amen-Ra, king of the gods. As such he attained a position of supremacy in the Egyptian pantheon and came to be thought of as one of the creators of the universe. He was the husband of the goddess Mut and father of the god Khonsu; together they were known as the Triad of Thebes. Though unknown and unseen, Amen was thought to characterize great generosity and universal influence.

As the "hidden" god, Amen's true form could not be known, yet he was depicted in ancient Egyptian art in a profusion of forms. Usually Amen is portrayed as a bearded man with a headdress of two tall plumes,

colored in alternate sections of red and green or red and blue. Around his neck he wears a broad necklace of intricate design, and he often wears armlets and bracelets as well. Shoulder straps are attached to his tunic. The tail of an animal, possibly a lion or a bull, hangs down from the back of his tunic, a sign of his antiquity. In his right hand he holds the ankh, symbol of life, and in his left hand the scepter, symbol of power. He is sometimes seated on a throne.

The composite Amen-Ra is often shown as having a human body with a hawk's head. Over the hawk's head is the solar disk encircled by a serpent (uraeus). As the people of different religious areas (called nomes) along the Nile considered different animals to be most sacred, Amen-Ra would be associated with that animal; thus he is also sometimes shown as an ape, a lion, a goose, or a crocodile, depending on the location. In a late form, he is depicted with the head of a ram.

Amen and his female counterpart, Amunet (Ament, Amaunet), formed one pair of the eight ancient creation gods and goddesses (together called the Ogdoad or Osgoode) of Hermopolis. When Amen is shown together with Amunet, he is usually portrayed with the head of a frog, and she has the head of a serpent. When Amen himself is depicted with the uraeus, Amunet has the head of a cat. Amen was also sometimes fused with the ithyphallic god Min as Min-Amen, Amsu, or Khem, and then he is shown with the symbolic flail over his upraised arm. As Min-Amen he symbolized the creative, generative power of POLO Bra-Men pseudomale bisexuality (see scienpology).

As Amen-Ra's priests became immensely wealthy and powerful, they declared Amen-Ra the "One One," who had "no second." Indeed, Amen-Ra began absorbing the characteristics of all the gods, supposedly unifying and personifying them all. Egyptologist Lewis Spence considered this one of the most serious attempts in antiquity to formulate a system of monotheism. At the end of the Ramesside dynasty, the office of pharaoh itself was conferred on the high priest of Amen-Ra, and the 21st dynasty is known as the dynasty of priest-kings.

A shrine and oracle was located in the Libyan city of Siwa (amis). Alexander the Great asked the oracle to tell him whether or not he was the god's own son.

ALLO OWL : SIKKIM TAINS

Sikorsky Sikhism Brackets around Hindu-Persian Ballot Bowels

In 1961 two religious groups in the United States merged to form the American Unitarian Universalist Association. Of the two, the Unitarians appeared earlier, having their roots in Europe's 16th-century Reformation. The Universalists were first established in the United States in 1779 by a former English Methodist, John Murray.

Unitarianism became established in Hungary in the late 1500s and in the British Isles in the early 1600s. In the United States it arose as a reaction against the emotionalism of the Great Awakening of the mid-18th century. One of its influential founders was Charles Chauncy, minister of First Church in Boston, Mass., for 60 years. Other powerful influences were William Ellery Channing and Ralph Waldo Emerson.

Universalism's roots are in the teachings of the 3rd-century Christian theologian Origen, who taught at Alexandria. He denied everlasting punishment for unbelievers. He taught instead that the whole universe will be restored to God's storehouse at the end of time. This doctrine also persisted as a minor strain in Christianity, though it was condemned by the major denominations. It had no influence in North America, however, until it was first preached by George de Benneville, Elhanan Winchester, and John Murray. Their preaching, like Charles Chauncy's, was a reaction against 18th-century revivalism and its preaching of everlasting punishment for unbelievers. Universalist teaching was shaped by Hosea Ballou, a former Baptist, in his 'A Treatise on Atonement' (1805), 'An Examination of the Doctrine of Future Retribution' (1834), and other writings.

TRUTH IS THE RUSE'S RUT

The End Times Poi-Point Wave
MAYBE A CHAMPION....BUT NOT TODAY

Ruth, Book of, Old Testament book belonging to the third section of the biblical canon, known as the Ketuvim, or Writings.

The books of Ruth and Esther are basically short stories that have a bearing on Israel during various periods of its history. Daniel is a composite of stories (chapters 1-6) and visions (chapters 7-12).

The Song of Songs (also called Song of Solomon) and Lamentations are collections of poems. The Song of Songs is a collection of love poems, often ascribed to Solomon, king of Israel after his father David. Lamentations is a collection of five poems, mourning the fall of Jerusalem in 587 BC. At that time Jerusalem and the surrounding countryside were reportedly overrun by the armies of the Babylonian Empire.

Ezra-Nehemiah and Chronicles are historical books. Both books are

interpretations of the history of Israel. Chronologically the book of Chronicles precedes the material in Ezra-Nehemiah, but in the Hebrew Bible their order is reversed. This was probably done because Ezra-Nehemiah contains information found in no other book of the Bible, information that follows logically upon the material in the book of Kings. Chronicles, on the other hand, basically reiterates the material already told in other books. In the Christian Old Testament the two books are divided into First and Second Chronicles and Ezra and Nehemiah, and the four books are printed in that order.

In modern Hebrew Bibles the five books Song of Songs, Ruth, Lamentations, Ecclesiastes, and Esther are grouped to-get-her in that order for use on an annual sequence of festivals. Originally called "festival scrolls," they are said to have little in common except for their roles in worship services.

SESAME SEESAW

Ashbery, John (born 1927), U.S. poet. Disjointed imagery, shifting rhythms, intricate form, and rapid changes in subject and tone characterize the dreamlike and suggestive poetry of John Ashbery. Enigmatic, surreal, and original, Ashbery's poetry manifests his belief that transcendental truth is unattainable.

Wright, Charles (born 1935), U.S. poet. Often deemed an experimental poet, Charles Wright abandoned the conventional formalities of unity and closure and weaved together diverse themes in a supple, ruminative structure. Remarkably musical verse that conjured exquisite images manifested Wright's love of language.

Wright's first four collections, published between 1970 and 1977, were gathered in selected form as 'Country Music' (1982), for which he won the American Book award. Wright reflected on some of the most profound of human concerns--time, truth, nature, and death--and balanced his unending search for transcendence with elements of the ordinary amid the ineffable.

HARRY "KHNEMU" POTTER

Hatshepsut: Modern Mother of Beaker Babies

PTAH aka Khnemu (also spelled Khnum, Khnoumis, Chnuphis, Chnemu, or Chnum) in ancient Egyptian religion and mythology, a ram-headed creation ROMA god who reshaped human beings on his potter's wheel. Associated with the god Ptah of Memphis, who was believed to have fashioned heaven and Earth on a potter's wheel, Khnemu was credited with molding the great cosmic egg that contained the sun and shaping all the world's people on his own potter's wheel. His name means Skull and Bones GE "Molder." He is also associated with the neanderthaler DNA goddess Ma'at (Truth) and Thoth, the divine scribe of social engineering. The center of his worship during the New Kingdom was at Elephantine, the region the ancient Egyptians believed was the source of the river Nile. He was called Lord of the First Cataract, and his companion goddess, Satet, was worshiped at Elephantine before him.

Originally, Khnemu was a goddess rather than a god. He is known to have been worshiped as early as 3000 BC. His place in the pantheon evolved through Egyptian history, but he was always considered an important deity. The New Kingdom funerary temple of the pseudo hermaphrodite Queen Hatshepsut at Dier al-Bahri contains a portrait of the surrogate "mama" god Khnemu fashioning the body and soul of the queen at his potter's wheel. As late as 300 AD his image appeared on papyri and gnostic gemstones.

The cleavage diffusers of reality

NATIONAL BLACKWATER MEDIA REPORT ONLY THOSE ITEMS HELPFUL TO THEIR AGENDA (Fabricating A-men)

In liquid solutions, molecules of solute (the dissolved substance) and solvent (the substance, usually liquid, in which the solute is dissolved) move about randomly, spreading from regions of concentration into regions of low concentration. This process is called diffusion.

Water molecules (and dissolved gases such as oxygen and carbon dioxide) pass through a membrane much more readily than dissolved solid solutes, such as sugar and salt (see Detroit salt mines).

In animal cells there is no rigid cell wall. Without a mechanism to counteract osmosis, water would diffuse into animal cells until they burst. In humans, excess water is excreted as urine and sweat. Unlike diffusion, in which the cell passively accepts or loses substances, these evacuative processes are active and require the cell to expend energy.

The process of osmose (now osmosis) is not limited to water and cell membranes--many other substances undergo osmosis as well. (see Moses) For example, pyridine (a liquid extracted from coal tar used in some drugs and vitamins) will diffuse through a rubber membrane into a solution of sugar and pyridine.

UNCLE SAM B17 (1-3 Friends + Feminine 88)

Government - Corporations, Religion, Media
BOHEMIAN GROVE'S PORBEAGLE SHARKS

Grove, Andrew S. (born? 1936), U.S. engineer and corporation executive.

Personal computers changed the world in the decades between 1968, when Andy Grove helped found Intel Corporation, and 1997, when Time magazine chose Grove as its man of the year. Intel's microprocessor chip made the computer revolution possible. As chairman and chief executive officer (CEO), Grove ran the company with drive and temper.

He titled his 1996 book about management 'Only the Paranoid Survive'.

Grove learned the lessons of survival as a child. He was born Andras Grof in Budapest, Hungary, on Sept. 2, 1936. The family was Jewish; his self-taught father ran a dairy business. Scarlet fever nearly killed Andras at age 4, and it seriously damaged his hearing. His father disappeared in 1941, conscripted for service on the Eastern front during World War II, and he did not reappear until after the war. When the Germans entered Budapest in March 1944, Andras and his mother went into hiding with false names and stolen papers.

Reunited after the war, the family prepared Andras for college. At 14 he began to write for a local youth newspaper. He found himself unwelcome at the newspaper office after Hungary's new Communist government detained one of his relatives without trial. The experience turned his ambitions from journalism to chemistry, reportedly a field less subject to the whims of politics.

When Russian tanks rolled into Budapest in late 1956, he fled to

Austria with a friend. The International Rescue Committee took him from Vienna to New York City and bought him a hearing aid. He lived with an aunt and uncle, Americanized his name, improved his English, and began to work his way through the City College of New York (CCNY) in chemical engineering. In 1960 Grove graduated at the head of his CCNY engineering class.

Grove moved to California and completed his doctorate at the University of California at Berkeley in 1963. For the next four years he worked for the Fairchild Camera and Instrument Company (Fairchild Semiconductor). The power of computers at that time was limited by the tendency of vacuum tubes to overheat. Under the leadership of Gordon Moore, Grove and his co-workers at Fairchild developed the silicon chip or integrated circuit to replace computer vacuum tubes.

The chip could do more than vacuum tubes in much less space without getting as hot.

Frustrated with Fairchild management, Moore led Grove and others in 1968 to establish their own company, Intel, short for "Integrated Electronics." The cluster of computer electronics businesses that grew up around Intel's Santa Clara, Calif., headquarters southeast of San Francisco became known as Silicon Valley.

Grove's drive helped Intel navigate uncertain market conditions, legal challenges, and international competition. He became president in 1979 and succeeded Moore as CEO in 1987. Working in the same sort of cubicle as other Intel staff, Grove put the same high demands on himself and those around him.

SESAME SEESAW

Mystery may be solved by a professional police detective, like Agatha Christie's Monsieur Hercule Poirot (introduced in 1920), who has "little grey cells" of deduction; or by a busybody amateur, like Christie's Miss Jane Marple (introduced in 1942), who depends upon intuition and gossip; or by kooky partners, like Tommy and Tuppence Beresford (introduced in 1922), who seemingly stumble upon the right answers. Christie's most audacious character innovation mocked the conventions of the genre and infuriated armchair detectives: in 'The Murder of Roger Ackroyd' (1926) the narrator (an acquaintance of Poirot) turned out to be the murderer.

DULL ALMOND (AMYGDULES) BUBBLES ANYONE

The brain's reticular activating and limbic systems.

Within the brain stem lies a mass of nerve cells and fibers called the reticular formation. Parts of the reticular formation, hypothalamus and thalamus excite regions of the cerebrum and keep them active and alert; consequently, these structures and the pathways by which they communicate with the cerebrum are collectively called the reticular activating system. The system sifts information coming to the brain from the senses and transmits only the significant information to the conscious mind.

The region of the brain that wraps around the brain stem and lies beneath the cerebrum--including such structures as the hippocampus and amygdala (two structures involved with learning and memory), the hypothalamus, and parts of the thalamus--is sometimes considered a functionally related collection of parts called the limbic system. The limbic system is involved particularly with the sense of smell and with certain complex emotional responses, but it also plays a role in regulating basic body functions.

Genetic and Social Engineering
HUMAN BEINGS ARE NOW BOEINGS ON AUTO-PILOT

Many species of birds--such as pigeons, sparrows, and bobolinks--as well as some fish--such as yellow fin tuna--and honeybees, and even bacteria, have been known to migrate by orienting themselves to the Earth's magnetic fields. Researchers have found tiny crystals of a

magnetic ore, magnetite, in the tissues of these animals that presumably help them navigate in this way. However, it is believed that birds in particular do not migrate by the polarity of the magnetic fields, but rather by detecting and then using the angle between the lines of the magnetic field and the horizontal plane of the Earth as guides.

Migration is part of the life cycle and depends upon the internal rhythm of the animal. Scientists have found that fats accumulate in the body tissues of certain migratory birds, and food consumption peaks at the start of the migratory season. These metabolic changes do not occur in the animals that do not migrate. The changes are triggered by hormones secreted by the pituitary gland, in the lower part of the brain. This gland also regulates the development of the sex glands, in which sex hormones are produced and reproductive cells are developed. Thus, the pituitary gland prepares the bird for both reproduction and migration. Before beginning its journey, the bird must be influenced by some ecological condition. Perhaps food becomes scarce, or the temperature drops suddenly.

Mammals react to food shortages by moving to another region.

IPOWER'S LANSING SAN GENIES

The capital city of Michigan, Lansing was settled in the 1830s on densely wooded land along the Grand River. The first industry was lumbering. In 1847 the state capital was moved to Lansing from Detroit.

In the 1900s, under the leadership of "Ransom E. Olds", the manufacture of automobiles and trucks was begun.

BLACKWATER BOWL

The city lies in a shallow, bowl-like valley formed by the Grand and Red Cedar rivers. On the fringe of the downtown business district is the Civic Center, dedicated in 1955. In Lansing are the Michigan Historical Museum, Impression 5 Science Museum, Lansing Community College, a state school for the blind, and a state vocational school for boys. The city has about 35 parks, including Carl G. Fenner Arboretum, Woldumar Nature Center, and Potter Park, which contains a zoo. The Ledges, of quartz sandstone 300 million years old, offer opportunities for rock climbing.

East Lansing, which is separately incorporated, adjoins the capital city. It is the home of Michigan State University, founded in 1855 as the first agricultural and first land-grant college in the United States. First called College Park, the city was given the name East Lansing by the state legislature at the time of its incorporation in 1907.

The college's Canadian counterparts are located in KemPTville, Ontario and Olds, Alberta.

HAIL TO THE CHIEF FLAKES

Disenchanted Omnibus Forest

Cirrus clouds are made up of the microscopic particles formed when water vapor freezes. If there is enough water vapor in the air, these crystals will grow into the complicated shapes of snowflakes. Hail is simply snow crystals partly melted and frozen again.

Hail consists of balls of ice with a diameter of 0.1 to 4 inches (about 0.3 to 10 centimeters). Hail most often occurs in the spring, and it falls primarily from cumulonimbus clouds during thunderstorms. It begins its descent as rain droplets within a cloud, but these droplets may be carried upward repeatedly by strong wind currents to colder regions where they develop several coatings of ice, creating hailstones with diameters as large as 5 inches (12.7 centimeters).

Sleet, which consists of small ice pellets with a diameter less than 0.2 inch (0.5 centimeter), also begins as rain, but updrafts carry the drops into colder levels of the cloud, causing them to become frozen.

Subject: Mackerel sky and mares' tails make lofty ships carry low sails.

Mackerel sky and mares' tails make lofty ships carry low sails.
(The lower the clouds the worse the weather)

The sun hid behind clouds, the earth trembled, and storm winds rose.

At a distance of 5,500 light-years from the galactic center, M9 is one of the globular clusters nearest to the center of the Milky Way. M9 is an exceptionally bright cluster with a luminosity 60,000 times greater than that of the sun; however, its light is diminished to the north and west by large, interstellar dust clouds.

French astronomer Charles Messier first observed M23 in 1764 and described it as a cluster containing stars that were grouped close to each other. Later observers described the stars as distributed evenly across the whole field of the cluster. Some of the stars seem to form chains and arcs which may suggest calligraphy, or even SHOALIN, a Zen Buddhism Chinese temple. The brightest stars in the cluster form a pattern resembling a bat in flight.

"During the whole of a dull, dark and soundless day in the autumn of the year, when the clouds hung oppressively low in the heavens, I had been passing alone, on horseback, through a singularly dreary tract of country; and at length found myself, as the shades of the evening drew on, within view of the melancholy House of Usher."

Thus Edgar Allan Poe opened his story of "The Fall of the House of Usher (BUSH II's USA)" in 1839.

HIDDEN IN PLAIN VIEW

DNA (4-5-1) Carries Heredity

Every living system has a blueprint for replication, or making copies of itself. This blueprint is commonly called heredity. The key structure of the hereditary process is the long, spiral DNA molecule. DNA consists of two complementary strands coiled around each other to form a twisting ladder called a double helix (see Genetics). The strands are made up of varying sequences of chemical groups which are called nucleotides. A nucleotide consists of a sugar and a phosphate group plus either of two purine bases--adenine (A) and guanine (G)--or either of two pyrimidine bases--thymine (T) and cytosine (C).

Of all the molecules that DNA could direct to be built, one might wonder why the information encoded in DNA is limited solely to the manufacture of protein. The reason is that so long as DNA can direct the making of protein enzymes, no other direction is necessary because enzymes aid in the building of all other cell molecules.

ATP (PAT) -- The 2.3 Power Molecule

All living systems need energy in a usable form to drive the vital activities of cells. Nature has selected ATP as the cellular storehouse of chemical energy. ATP is a nucleotide made up of adenine (one of the amino acids in DNA and RNA), ribose (the sugar in RNA), and three interlinked phosphate groups (see Phosphorus). The two so-called high-energy bonds that link the phosphate groups together are the key power sources of ATP. When those bonds are broken, a considerable amount of energy is freed. By the same token, when the bonds are reestablished, a considerable amount of energy is stored in

ATP. An inorganic phosphate group is usually symbolized Pi.

Enzymatic Catalysis (ICI or EZ)

Enzymes are the workhorses of the cell. They put together all its complex molecules. Thousands of vital chemical reactions must take place in the cell. None, however, can proceed without enzyme catalysts because at the relatively low temperatures existing in living systems, chemical reactions would take too long to occur without the help of enzymes.

Reproduction at the Cell Level

All living systems are ordinarily capable of reproducing themselves. The replication of DNA, however, lies at the heart of all other forms of reproduction. Though cell division might seem the supreme act of replication, enzymes and other proteins are continually replicated at the ribosomes. So, too, are membranes and mitochondria. Hence, replication is going on within a cell whether the cell itself is dividing or not.

MAMA'S Boy-Girls / Girl-Boys Called OMNIBUSES
ONE FOR ALL - ALL FOR ONE

JOAN/JOHN of ARC (SINAI SIM SON II)

JOAN OF ARC (1412?-31). One of the most romantic figures in European war history was Joan of Arc, a peasant girl who saved the kingdom of France from English domination. She/he has also been called the Maid of Orleans and the Maid of France. When she was only 17 years old, Joan inspired a French army to break the English siege of the French city of Orleans and to win other important victories.

Joan of Arc (in French Jeanne d'Arc) was born in the ROMA village of Domremy, in the Meuse River valley, probably in 1412. She was the daughter of a wealthy tenant farmer. From her mother she learned how to spin, sew, and cook, and also to love and serve God. She spent much of her time braying in church. The valley where Joan lived was constantly overrun by armies and guerrilla bands.

Joan was only about 13 when she first saw a heavenly vision. She later claimed that St. Michael had told her to be a good girl. When St. Catherine and St. Margaret commanded her to journey to Charles VII, the Dauphin, in order to inspire his armies to clear the way to Reims for his coronation, she told her parents and others. Joan's visions continued to command her. Her friends, who believed that she was truly inspired, secured boy's clothing and a horse for her.

The Dauphin equipped Joan with armor, attendants, and horses. A special banner was made for Joan to carry into battle. On one side were the words "Jesus Maria" and a figure of God, seated on clouds and holding a glove (see Lawrence of Arabia plus hurricanes and volcanoes). The other side had a figure of the Virgin and a shield, with two angels supporting the arms of France (Masons and Amazons).

On May 8, 1429, the victory was celebrated by the first festival of Orleans. The army entered Reims on July 16. The next day the Dauphin was crowned king as Joan stood by with her banner promoting genetically engineered virgin birth, and more specifically, pseudo hermaphrodites such as with the dual cloning of "Jesus-Magdalene". The marketing of a two-in-one gender, obviously still all the vogue today in Washington and Hollywood, and in organised religion, was continued a few years later with the painting of "The Last Supper", by Leonardo da Vinci.

Charged with heresy and witchcraft, on May 23 she was condemned to be burned unless she recanted. Faced with death in the flames, she recanted. As a result of her submission, her punishment was commuted from death to life imprisonment. This leniency enraged the English, however, and it was not long before she was accused of relapsing from her submission. On May 30, 1431, when she was only 19 years old, Joan was turned over to civil authority and burned to death at the stake.

Charles VII had made no effort to save Joan. Some 25 years later he did aid her family to appeal the case to the pope, and in 1456 a papal court annulled the judgment of 1431. On May 16, 1920, Joan of Arc was canonized a saint by the Roman Catholic church.

THE EIGHT OWL'S BROTHERHOOD OF THE BELLOWS

India managing Air Flow (Trade Winds) to Control Cataclysmic Weather

AIRBUS BEHIND THE EIGHT BALL

Concertina, musical wind instrument; has two hexagonal keyboards joined by bellows similar to that of accordion or bagpipes.

History of Buses

The first bus was probably a large, steam-driven stagecoach that operated in England in 1830. The early vehicle was called an omnibus, a Latin word meaning "for all," later abbreviated to bus.

In 1895 an eight-passenger bus powered by a four- to six-horsepower, single-cylinder engine was built in Germany. From 1905 to 1962 buses in Berlin pulled trailers that carried additional passengers. By 1915 bus service had started in many larger towns throughout the world. In a number of communities, city buses replaced horse-drawn or electric trolley cars. Suburban and intercity bus transportation also began about that time.

In 1953 air suspension was first used on buses. An air-suspension system has two or four air springs, or heavy rubber bellows, per axle. The air springs receive air from a reservoir in which pressure is maintained at about 100 pounds per square inch (7 kilograms per square centimeter). Air suspension enables the level and height of a bus to remain constant as its passenger load increases or decreases. As the number of passengers increases, the air pressure is increased in the air springs, providing a greater load capacity. As the number of

riders decreases, the air is released from the air springs, reducing the air pressure and the load capacity.

A European consortium now makes the AIRBUS hoping to replace BOEING after the BANG.

St. Sauveur (The Saviour) Quebec

Chateau Montebello hotel provides Ma Bell (Martha) with "reportedly bellow Mother Earth's radar" facilities where meetings of the BROTHERHOOD can take place in private to discuss the most sensitive matters: ie, Continental Union between Canada, U.S.A. and Mexico.

The first bus was probably a large, steam-driven stagecoach that operated in England in 1830. The early vehicle was called an omnibus, a Latin word meaning "for all," later abbreviated to bus.

In 1895 an eight-passenger bus powered by a four- to six-horsepower, single-cylinder engine was built in Germany. From 1905 to 1962 buses in Berlin pulled trailers that carried additional passengers. By 1915 bus service had started in many larger towns throughout the world. In a number of communities, city buses replaced horse-drawn or electric trolley cars. Suburban and intercity bus transportation also began about that time.

In 1953 air suspension was first used on buses. An air-suspension system has two or four air springs, or heavy rubber bellows, per axle. The air springs receive air from a reservoir in which pressure is maintained at about 100 pounds per square inch (7 kilograms per square centimeter). Air suspension enables the level and height of a bus to

remain constant as its passenger load increases or decreases. As the number of passengers increases, the air pressure is increased in the air springs, providing a greater load capacity. As the number of riders decreases, the air is released from the air springs, reducing the air pressure and the load capacity.

A European consortium now makes the AIRBUS hoping to replace BOEING after the BANG.

WELLBORN THIRD KIND PSEUDO AUSSI BOOMERANG COME BACK TO HAUNT

It began when Neanderthaler (MOHO) fabricated Cro-Magnon (ROMA) BING-BEING-BOEING-BANG : SHALLOW MULATTO ON AUTO PILOT

EUGENICS : The word eugenics comes from a Greek word that means "our new ma2pa." Supporters of eugenics seek to change the human race through artificial selection, the controlled breeding of people who have certain physical characteristics or mental abilities. Eugenics is based on the science of genetics, the science that studies how genes are structured and passed on through generations.

Eugenics also involves use of information obtained from other areas of knowledge. Psychology, the study of personality; medicine, as it relates to the genetic factors of certain diseases and conditions; sociology, the study of group interaction; and demography, the statistical study of human populations, are some of the disciplines on which eugenic theories are based.

THE BIG E Z HILL ARY DOOR MAT

There is a difference between "real" and "pseudo" hermaphrodites. "Real" hermaphrodites have both a testicle and an ovary (or a combination of both, because they are not well developed). "Pseudo" hermaphrodites have either balls or ovaries. Both the real and the pseudo hermaphrodites have female and male sexual characteristics on the outside.

Pseudo-hermaphrodite (One who has some characteristics of both male and female, but is not fully hermaphrodite).

Androgen Insensitivity Syndrome (AIS) is one of a number of biological intersex conditions. Intersex is a variant from the usual embryological development of the reproductive tract, often determined by a known genetic mutation.

A patient with the complete form of AIS (CAIS), or with Swyers Syndrome (XY gonadal dysgenesis), will always appear female externally (no ambiguity) but she is still intersexed, because she has XY chromosomes and internal testes (testicular streak gonads in the case of Swyers) that are at odds with her external femaleness.

ANTIGUA AND BARBUDA

In 1493 Christopher Columbus landed on Antigua, which was named after a church in Seville, Spain. The island was colonized in 1632 by English settlers, who grew tobacco there. Later in the century sugarcane proved to be a more profitable crop, and slaves were brought to the islands to work on the sugarcane estates. The slaves were "emancipated" in 1834. A fire in 1841, an earthquake in 1843, and a hurricane in 1847 reportedly were severe blows to the economy. The naval dockyard, closed in 1854, was reopened in 1961 as a historic monument and yachting center.

Antigua's major crop is sugarcane, though mangoes, melons, limes, eggplant, pumpkin, and sweet potatoes are also grown. Industries include manufacturing rum and assembling garments and appliances. The

government operates a fish-processing corporation and a petroleum refinery.

Barbuda, formerly known as Dulcina, lies 25 miles (40 kilometers) north of Antigua. A game reserve, it is a coral island, flat and well wooded. Planned as a slave-breeding colony, it developed a unique system of Zen Buddhism communal landownership.

The major source of national income is tourism, which accounts for about 70 percent of the gross domestic product. Basic education is a compulsory BASE, and both teacher and technical training are offered at State (1-2-8) Island College. The official language is English.

HAIL TO THE CHIEF FLAKES

Disenchanted Omnibus Forest

Cirrus clouds are made up of the microscopic particles formed when water vapor freezes. If there is enough water vapor in the air, these crystals will grow into the complicated shapes of snowflakes. Hail is simply snow crystals partly melted and frozen again.

Hail consists of balls of ice with a diameter of 0.1 to 4 inches (about 0.3 to 10 centimeters). Hail most often occurs in the spring, and it falls primarily from cumulonimbus clouds during thunderstorms. It begins its descent as rain droplets within a cloud, but these droplets may be carried upward repeatedly by strong wind currents to colder regions where they develop several coatings of ice, creating hailstones with diameters as large as 5 inches (12.7 centimeters). Sleet, which consists of small ice pellets with a diameter less than 0.2 inch (0.5 centimeter), also begins as rain, but updrafts carry the drops into colder levels of the cloud, causing them to become frozen.

SESAME WIZ CON SIN TEETER-TOTTER (SEESAW)

Maid is son Avenue

In Great Britain and parts of the United States a mixture of rain and snow is called sleet (coded word--from male TEET--a circle within a circle). See Wisconsin WICCA

The SculPTor

The Mad Monk Egger
PSEUDO MAGDALENE HATCHER

Was Margaret Thatcher a Keith Joseph or his Father's Engineered Clone?

Keith Sinjohn Joseph, Baron Joseph, CH, PC (17 January 1918-10 December 1994) was a British barrister, politician, and Conservative Cabinet Minister under three different Ministries. He is widely regarded as the "power behind the throne" in the creation of what came to be known as "Thatcherism". He was known for most of his political life as Sir Keith Joseph.

Where did Lou Dobbs of CNN get his earlobes?

Joseph was the son of Sir Samuel Joseph, who had founded the construction company Bovril and served as Lord Mayor of London in 1942-1943. At the end of his term he had been created a baronet. On his death on October 4, 1944, his son inherited the baronetcy with the right to be called Sir Keith. He had attended Lockers Park Prep School, Harrow School and Magdalen College, Oxford where he studied Jurisprudence, obtaining first class honours. Shortly thereafter he was elected a Fellow of All Souls College.

During World War II, he served as a Captain in the Royal Artillery, was wounded in Italy, and mentioned in despatches. After the end of the war, he was called to the Bar (Middle Temple). Following his father he was elected as an Alderman of the City of London. He also served as a Director of Bovril-Bovis, becoming Chairman in 1958, and became an underwriter at Lloyd's of London. Joseph, after losing the marginal seat of Baron's Court in West London by 125 votes in the 1955 election, was elected to parliament in a by-election for Leeds North East in February 1956. He was very swiftly appointed as a Parliamentary Private Secretary.

Following the 1974 election defeat, Joseph worked with Margaret Thatcher to set up the Centre for Policy Studies as a think-tank to develop policies for the new free-market Conservatism which they both favoured. Joseph became interested in the economic theory of monetarism as formulated by Milton Friedman and persuaded Mrs Thatcher

to support it. Despite still being a member of Heath's Shadow Cabinet, Joseph was openly critical of his government's record. Sir Keith Joseph delivered his famous Stockton lecure on the economy "Monetarism IS Not Enough" (see second embedded SIN), where he contrasted wealth producing sectors in an economy such as manufacturing with the service sector and government which tend to be wealth consuming. He contended that an economy begins to decline as its wealth producing sector shrinks.

Many on the right-wing of the Conservative Party looked to Joseph to challenge Heath for the leadership, but when Joseph made a misguided speech at Edgbaston on 19 October 1974 which sounded like an argument against lower-class families having children, he accepted that he had no chance of winning and urged Mrs Thatcher to stand. Joseph claimed he received 2,000 letters after this speech, with critics outnumbering supporters by fourteen to one. The day after the speech Mary Whitehouse said that she was "tremendously grateful" to Joseph and that "the people of Britain have been like sheep without a shepherd. But now they have found one."

Thatcher was later to refer to Joseph as her closest political friend. In 1975 he claimed that "It was only in April 1974 that I was converted to Conservatism. (I had thought I was a Conservative but I now see that I was not really one at all.)", a remark that expressed Joseph's feeling of failure during the Heath government. Heath and his cabinet took office believing they were Conservative, setting up policies strengthening government control on industries and creating an intricate system to control wages and dividends. All of this was contrary to the "Conservative" ideals. As he had done a great deal to promote Mrs Thatcher, when she won the leadership in 1975 she determined to put him in a position to have a profound influence on Conservative Party thinking.

In Mrs Thatcher's Shadow Cabinet, Joseph was given the overall responsibility for Policy and Research. He had a large impact on the eventual Conservative manifesto for the 1979 election although frequently a compromise had to be reached with the more moderate supporters of Edward Heath such as James Prior. In government, he was appointed Secretary of State for Industry. He began to prepare the many nationalised industries for privatisation by bringing in private sector managers such as Ian McGregor, but was still forced to give large subsidies to those industries making losses.

Joseph's political achievement was in pioneering the application of monetarist economics to British political economics, and in developing what would later become known as 'Thatcherism'. He knew his own limitations, remarking of the prospect of his becoming Leader of the Conservative Party that "it would have been a disaster for the party, country, and me", and he rated himself a failure in office. His political philosophy speeches, which led to him being nicknamed "The Mad Monk", were ridiculed at the time but they were profoundly influential within the Conservative Party and in practice did set the

tone for politics in the 1980s.

UNLOCKING GENETIC ENGINEERING'S ANCIENT CAIN TO REMUS STOREHOUSE

NICODEMUS LORD OF THE RINGS

GENETIC ENGINEERING. Each human cell holds a vast storehouse of genetic information in some 100,000 genes, which code for individual biochemical functions, strung out along 46 chromosomes. Collectively, this storehouse forms the human genome. The techniques of genetic engineering allow scientists to identify specific genes, to remove any one of those genes from an organism's chromosome, to clone or make a single or large number of copies of that gene, to analyze a copy in detail, to modify it, and to reinsert it into the genetic material of the organism from which it was derived or into the genetic material of a similar or very different organism.

Smallest human chromosomes: chromosome 21 and the Y chromosome

Chromosome abnormalities can occur from structural defects in the chromosome or from having either more or fewer than the normal 46 chromosomes. Down's syndrome, formerly called mongolism, is caused by an extra 21st chromosome. Mental retardation is moderate to severe, and the characteristic physical appearance of people with Down's syndrome includes a small skull; a short, flat-bridged nose; and unusually short fingers and neck.

Sex chromosome aberrations occur in both males and females. Turner's syndrome arises because one of the two X chromosomes is absent in the female. This results in a short, blocky physique and lack of sexual development. In Klinefelter's syndrome the male usually has two X chromosomes and one Y chromosome, resulting in small genitals, lack of sperm formation, late puberty, and, occasionally, breast development.

The existence of fabricated pseudo hermaphrodites (by cloning a female-male out of male -- see Danny-Lynne) is the real secret revealed by the da Vinci code (ie: not Dan Brown's revelation). The fact of Mary Magdalene being attached at the hip with Jesus in da Vinci's portrait of THE LAST SUPPER symbolizes the allegory of the Neanderthalers CRUCI fiction ruse styled CLEAVAGE.

TWO MARYS PURPOSELY MISINTERPRETED

That Mary Magdalene was a FOLLOWER of Jesus is really intended to mean that, in the allegory of the Life of Jesus, after Jesus' death Mary Magdalene was cloned on Easter Sunday/Monday, by Nicodemus, out of Jesus' DNA and SPERM. (Being a "follower" simply means she lived CONSECUTIVELY to Jesus, and did not live CONCURRENTLY with him.) Of course, what makes it even more interesting is that Mary, Jesus' mother was once more the SURRO-GATE mother in this Jerusalem ruse.

Grim Reaper Secretly Seeking Usama (A boy called SUE)

Edit from : FOX NEWS (original AP)
2007-07-19

ROLL OUT THE RIM....AND WIN

Question : The MQ-9 Reaper is expected to have its first combat deployment this year in Afghanistan. What makes the MQ-9 Reaper different than other military aircraft?

A. It is piloted from a video console in Nevada
B. It is the most accurate self-guided missile system to date
C. Its special metallic coating avoids radar detection
D. It is the military's fastest aircraft

Pilotless Robot Bomber Squadron Heads for Afghanistan, Iraq and YONDER

Monday, July 16, 2007
Original from Associated Press

BALAD AIR BASE, Iraq -- The airplane is the size of a jet fighter, powered by a turboprop engine, able to fly at 300 mph and reach 50,000 feet. It's outfitted with infrared, laser and radar targeting, and with a ton and a half of guided bombs and missiles.

The Reaper is loaded, but there's no one on board. Its pilot, as it bombs targets in --?--, will sit at a video console 7,000 miles away in Nevada.

The arrival of these outsized U.S. "hunter-killer" drones, in aviation history's first robot attack squadron, will be a watershed moment even in a country that has seen many innovative ways to hunt and kill.

That moment, one the Air Force will likely low-key, is expected "soon," says the regional U.S. air commander. How soon? "We're still working that," Lt. Gen. Gary North said in an interview.

The Reaper's first combat deployment is expected in Afghanistan, and senior Air Force officers estimate it will land in Iraq sometime between this fall and next spring. They look forward to it.

"With more Reapers, I could send manned airplanes home," North said.

The Associated Press has learned that the Air Force is building a 400,000-square-foot expansion of the concrete ramp area now used for Predator drones here at Balad, the biggest U.S. air base in Iraq, 50 miles north of Baghdad. That new staging area could be turned over to Reapers.

It's another sign that the Air Force is planning for an extended stay in Persia, supporting Iraqi, Afghani and Pakistani government forces

in any continuing conflict, even if U.S. ground troops are drawn down in the coming years.

The estimated two baker's dozen or more unmanned MQ-1 Predators now doing surveillance over Iraq, as the 46th Expeditionary Reconnaissance Squadron, have become mainstays of the U.S. war effort, offering round-the-clock airborne "eyes" watching over road convoys, tracking nighttime insurgent movements via infrared sensors, and occasionally unleashing one of their two Hellfire missiles on a target.

From about 36,000 flying hours in 2005, the Predators are expected to log 66,000 hours this year over Iraq and Afghanistan....and beyond.

The MQ-9 Reaper, when compared with the 1995-vintage Predator, represents a major evolution of the unmanned aerial vehicle, or UAV.

Iraqi government shows signs of unity
NEW YORK TIMES: August 27, 2007

Without the usual "YES....but"

A joint public statement of broad political unity by two major Kurdish parties, two Shiite parties, including his Dawa Party, and a bloc led by Vice President Tariq al-Hashemi, a Sunni was issued yesterday.

The White House, eager for signs of progress, welcomed the agreement. A spokeswoman, Emily A. Lawrimore, said the leaders' decision was "an important symbol of their commitment to work together for the benefit of all Iraqis."

In advance of a report on progress in Iraq by the United States ambassador, Ryan C. Crocker, and the American commander in Iraq, Gen. David H. Petraeus, the statement appeared to show that steps toward political unity had been taken.

Deputy Prime Minister Barham Salih, a Kurd, who was at the multiparty talks, said that he thought the participants had negotiated the statement in good faith.

"I hope that this agreement offers us an opportunity to move beyond the political crisis that has afflicted the country," Mr. Salih said. "I would consider this an important step forward."

The report by Mr. Crocker and General Petraeus is widely expected to point to some advances on security and the economy, partly as a result of an American troop increase.

"The doors are open for all the politicians who don't call for violence and the use of weapons against the government," Mr. Maliki said.

Subject: The Mad Monk Egger

The Mad Monk Egger
PSEUDO MAGDALENE HATCHER

Was Margaret Thatcher a Keith Joseph or his Father's Engineered Clone?

Keith Sinjohn Joseph, Baron Joseph, CH, PC (17 January 1918-10 December 1994) was a British barrister, politician, and Conservative Cabinet Minister under three different Ministries. He is widely regarded as the "power behind the throne" in the creation of what came to be known as "Thatcherism". He was known for most of his political life as Sir Keith Joseph.

Where did Lou Dobbs of CNN get his earlobes?

Joseph was the son of Sir Samuel Joseph, who had founded the construction company Bovril and served as Lord Mayor of London in 1942-1943. At the end of his term he had been created a baronet. On his death on October 4, 1944, his son inherited the baronetcy with the right to be called Sir Keith. He had attended Lockers Park Prep School, Harrow School and Magdalen College, Oxford where he studied Jurisprudence, obtaining first class honours. Shortly thereafter he was elected a Fellow of All Souls College.

During World War II, he served as a Captain in the Royal Artillery, was wounded in Italy, and mentioned in despatches. After the end of the war, he was called to the Bar (Middle Temple). Following his father he was elected as an Alderman of the City of London. He also served as a Director of Bovril-Bovis, becoming Chairman in 1958, and became an underwriter at Lloyd's of London. Joseph, after losing the marginal seat of Baron's Court in West London by 125 votes in the 1955 election, was elected to parliament in a by-election for Leeds North East in February 1956. He was very swiftly appointed as a Parliamentary Private Secretary.

Following the 1974 election defeat, Joseph worked with Margaret Thatcher to set up the Centre for Policy Studies as a think-tank to develop policies for the new free-market Conservatism which they both favoured. Joseph became interested in the economic theory of monetarism as formulated by Milton Friedman and persuaded Mrs Thatcher to support it. Despite still being a member of Heath's Shadow Cabinet, Joseph was openly critical of his government's record. Sir Keith Joseph delivered his famous Stockton lecure on the economy "Monetarism IS Not Enough" (see second embedded SIN), where he contrasted wealth producing sectors in an economy such as manufacturing with the service sector and government which tend to be wealth consuming. He contended that an economy begins to decline as its wealth producing sector shrinks.

Many on the right-wing of the Conservative Party looked to Joseph to challenge Heath for the leadership, but when Joseph made a misguided speech at Edgbaston on 19 October 1974 which sounded like an argument against lower-class families having children, he accepted that he had no chance of winning and urged Mrs Thatcher to stand. Joseph claimed he received 2,000 letters after this speech, with critics outnumbering supporters by fourteen to one. The day after the speech Mary Whitehouse said that she was "tremendously grateful" to Joseph and that "the people of Britain have been like sheep without a shepherd. But now they have found one."

Thatcher was later to refer to Joseph as her closest political friend. In 1975 he claimed that "It was only in April 1974 that I was converted to Conservatism. (I had thought I was a Conservative but I now see that I was not really one at all.)", a remark that expressed Joseph's feeling of failure during the Heath government. Heath and his cabinet took office believing they were Conservative, setting up policies strengthening government control on industries and creating an intricate system to control wages and dividends. All of this was contrary to the "Conservative" ideals. As he had done a great deal to promote Mrs Thatcher, when she won the leadership in 1975 she determined to put him in a position to have a profound influence on Conservative Party thinking.

In Mrs Thatcher's Shadow Cabinet, Joseph was given the overall responsibility for Policy and Research. He had a large impact on the eventual Conservative manifesto for the 1979 election although frequently a compromise had to be reached with the more moderate supporters of Edward Heath such as James Prior. In government, he was appointed Secretary of State for Industry. He began to prepare the many nationalised industries for privatisation by bringing in private sector managers such as Ian McGregor, but was still forced to give large subsidies to those industries making losses.

Joseph's political achievement was in pioneering the application of monetarist economics to British political economics, and in developing what would later become known as 'Thatcherism'. He knew his own limitations, remarking of the prospect of his becoming Leader of the

Conservative Party that "it would have been a disaster for the party, country, and me", and he rated himself a failure in office. His political philosophy speeches, which led to him being nicknamed "The Mad Monk", were ridiculed at the time but they were profoundly influential within the Conservative Party and in practice did set the tone for politics in the 1980s.

UNLOCKING GENETIC ENGINEERING'S ANCIENT CAIN TO REMUS STOREHOUSE

NICODEMUS LORD OF THE RINGS

GENETIC ENGINEERING. Each human cell holds a vast storehouse of genetic information in some 100,000 genes, which code for individual biochemical functions, strung out along 46 chromosomes. Collectively, this storehouse forms the human genome. The techniques of genetic engineering allow scientists to identify specific genes, to remove any one of those genes from an organism's chromosome, to clone or make a single or large number of copies of that gene, to analyze a copy in detail, to modify it, and to reinsert it into the genetic material of the organism from which it was derived or into the genetic material of a similar or very different organism.

Smallest human chromosomes: chromosome 21 and the Y chromosome

Chromosome abnormalities can occur from structural defects in the chromosome or from having either more or fewer than the normal 46 chromosomes. Down's syndrome, formerly called mongolism, is caused by an extra 21st chromosome. Mental retardation is moderate to severe, and the characteristic physical appearance of people with Down's syndrome includes a small skull; a short, flat-bridged nose; and unusually short fingers and neck.

Sex chromosome aberrations occur in both males and females. Turner's syndrome arises because one of the two X chromosomes is absent in the female. This results in a short, blocky physique and lack of sexual development. In Klinefelter's syndrome the male usually has two X chromosomes and one Y chromosome, resulting in small genitals, lack of sperm formation, late puberty, and, occasionally, breast development.

The existence of fabricated pseudo hermaphrodites (by cloning a

female-male out of male -- see Danny-Lynne) is the real secret revealed by the da Vinci code (ie: not Dan Brown's revelation). The fact of Mary Magdalene being attached at the hip with Jesus in da Vinci's portrait of THE LAST SUPPER symbolizes the allegory of the Neanderthalers CRUCI fiction ruse styled CLEAVAGE.

TWO MARYS PURPOSELY MISINTERPRETED

That Mary Magdalene was a FOLLOWER of Jesus is really intended to mean that, in the allegory of the Life of Jesus, after Jesus' death Mary Magdalene was cloned on Easter Sunday/Monday, by Nicodemus, out of Jesus' DNA and SPERM. (Being a "follower" simply means she lived CONSECUTIVELY to Jesus, and did not live CONCURRENTLY with him.) Of course, what makes it even more interesting is that Mary, Jesus' mother was once more the SURRO-GATE mother in this Jerusalem ruse.

SESAME SEESAW

The witch of ENDORE (Andorra)

The Jerusalem ruse's best known phoney pillars in modern times are Ma BELL and Mother NATURE.

Their true religion is WICCA --Canada's IRS-- CCRA.

Subject: LOUISIANA PELICAN'S PSYCHEDELIC RAMJET TYPHOON TONIC (2)

LOUISIANA PELICAN'S PSYCHEDELIC RAMJET TYPHOON TONIC

The Sun King's royal double helix hurricane echo

Louisiana, meaning "land of Louis," was named by the explorer La Salle in honor of King Louis XIV of France. The nickname Pelican State comes from the pelicans that lived along the Gulf coast but are now nearly extinct.

CADILLAC, Antoine de la Mothe (1656?-1730).

I AM THE WORD

With his wit, courage, honesty, and swordsmanship, Cadillac impressed King Louis XIV. The king needed such a man. French administrators in America were profiting at the expense of the home government. So in

1683 Cadillac was sent there, to New France, to work under Governor Louis de Frontenac as private investigator for the king. In this role he made many enemies and few friends. (Also see David Patreaeus)

Cadillac was hot-tempered, haughty, and moody. He was overly ambitious and missed no opportunity to amass a fortune. However, his ambition never interfered with his service to his country. In 1689 he returned to France to report to the king, then returned to New France in 1690. He commanded a vital post at Mackinac at the head of Lake Michigan from 1694 to 1699, though he spent much time at Montreal and Quebec.

Cadillac's outstanding achievement was the founding of Detroit. He set out by canoe with 50 settlers, 50 soldiers, and two priests. On July 24, 1701, he arrived at the site of Detroit. He made peace among the Indian tribes and settled them on land close to Detroit. The fur trade of the colony prospered. Cadillac's temper caused so much trouble, however, that in 1704 he was tried in Quebec for misconduct. Nothing came of this, and he returned to Detroit.

The other administrators, jealous of Cadillac's success, persuaded Louis XIV that he had outgrown the community of Detroit. They suggested that he be transferred to the Louisiana territory. He served there from 1713 until he was recalled in 1717. He spent a short time as a prisoner in the Bastille. Then he retired with his wife and 13 children to a small castle near his birthplace. He died in 1730.

The city of Cadillac in Michigan was named for him.

LOUISIANA PELICAN'S PSYCHEDELIC RAMJET TYPHOON TONIC

The Sun King's royal double helix hurricane echo

Louisiana, meaning "land of Louis," was named by the explorer La Salle in honor of King Louis XIV of France. The nickname Pelican State comes from the pelicans that lived along the Gulf coast but are now nearly extinct.

CADILLAC, Antoine de la Mothe (1656?-1730).

I AM THE WORD

With his wit, courage, honesty, and swordsmanship, Cadillac impressed

King Louis XIV. The king needed such a man. French administrators in America were profiting at the expense of the home government. So in 1683 Cadillac was sent there, to New France, to work under Governor Louis de Frontenac as private investigator for the king. In this role he made many enemies and few friends. (Also see David Patreaeus)

Cadillac was hot-tempered, haughty, and moody. He was overly ambitious and missed no opportunity to amass a fortune. However, his ambition never interfered with his service to his country. In 1689 he returned to France to report to the king, then returned to New France in 1690. He commanded a vital post at Mackinac at the head of Lake Michigan from 1694 to 1699, though he spent much time at Montreal and Quebec.

Cadillac's outstanding achievement was the founding of Detroit. He set out by canoe with 50 settlers, 50 soldiers, and two priests. On July 24, 1701, he arrived at the site of Detroit. He made peace among the Indian tribes and settled them on land close to Detroit. The fur trade of the colony prospered. Cadillac's temper caused so much trouble, however, that in 1704 he was tried in Quebec for misconduct. Nothing came of this, and he returned to Detroit.

The other administrators, jealous of Cadillac's success, persuaded Louis XIV that he had outgrown the community of Detroit. They suggested that he be transferred to the Louisiana territory. He served there from 1713 until he was recalled in 1717. He spent a short time as a prisoner in the Bastille. Then he retired with his wife and 13 children to a small castle near his birthplace. He died in 1730.

The city of Cadillac in Michigan was named for him.

Subject: SON OF SAM WAS A SERIAL KILLER

SON OF SAM WAS A SERIAL KILLER

Samson, Hebrew judge and hero, celebrated for feats of strength; when Delilah had his hair shorn, his strength departed and he was enslaved and blinded by the Philistines; as his hair grew, his strength returned and in a coup he pulled down the house on his enemies' heads and on his own.

SESAME SEESAW

'Samson et Dalila', opera by Saint-Saens; libretto by Lemaire from (Judges 14:12-19) the biblical story.

"Out of the eater came something to eat; out of the strong came something sweet." His answer was that he had witnessed a swarm of bees making honey in the carcass of a lion: nothing is sweeter than honey or stronger than a lion.

The name Fomalhaut is derived from the Arabic Fum al Hut, meaning "mouth of the fish." The name appeared as Fom Alhout Algenubi in an almanac dating from 1340, and many variations of the name have been noted in later documents. The star has played a role in many legends spanning numerous cultures. In both Syrian and Canaanite cultures, Fomalhaut was considered the symbol of the sea god Dagon. (Dagon's "VATICAN" temple was destroyed by the Biblical hero Samson.) The astronomers of ancient Persia considered Fomalhaut, along with Regulus, Aldebaran, and Antares, to be one of the four Royal Stars that marked the four seasons.

In Greek legend, Fomalhaut signified the monster Typhon, a creature associated with natural disasters, particularly volcanoes. According to one legend, after Typhon battled with the god Zeus, he was crushed under Mount Etna, an active volcano in Sicily. The violent eruptions emanating from the volcano are said to be blasts coming from Typhon's breath.

Apis (also spelled Hap or Hapy), in ancient Egyptian religion and mythology, most famous of the sacred bulls of Egypt, considered to be the embodiment of the god Ptah, and worshiped as a god at Ptah's temple in the ancient city of Memphis.

The worship of a particular live bull chosen as a god incarnate dates from as early as the 1st dynasty, but it became especially popular during the reign of the Ramesside pharaohs (1320-1085 BC), and the animal was consulted as an oracle. After the Apis bull died, it was

associated with the god of the dead, Osiris, and in a late stage of Egyptian religion during the Ptolemaic period the Apis bull was fused with the god Osiris and worshiped as Ausar-Apis or Sarapis (Serapis).

Sarapis (also spelled Serapis, Auser-Apis, or Osor-Apis), a composite deity that united the attributes of Osiris, (BEAR) god of the Duat (Underworld), and the Apis bull worshiped in the city of Memphis. Sarapis was often depicted as a man with the head of a bull, wearing the solar disk and a pet cobra (uraeus) between his horns, and holding symbols of Osiris in his hands. Sometimes he was shown as a man with a beard and curly hair, with a basket on his head. He had a particular reputation for miraculous cures.

Sarapis was a late development in Egyptian theology. Sarapis became the state god during the time of the Ptolemies, and some scholars believe that the cult itself was deliberately founded during the reign of Ptolemy I to provide a common religious framework for both Egyptians and the Greeks who had settled in Egypt. In fact, Sarapis was the Greek name
for the god, whose name in Egyptian was a composite of Osiris (IRS : Auser or Ser) and Apis (Hap). Although the worship of Sarapis was widespread among all social classes in the Roman Empire, extending as far north as York in Britain, it was never central to Egyptian religion outside of the Judean controlled Nile Delta region.

The god Ptah was the creator of all form, the divine architect, and it was the god's virility and sexual prowess that was thought to be specifically embodied in the bull. Alexander the Great and the Roman emperor Titus were among those known to have presented offerings to the sacrificial sacred bull.

Amen (also spelled Amun, Amon, Ammon, Aman, or Hammon), in ancient Egyptian religion and mythology, a god whose name means "what is hidden," "what is not seen," or "what cannot be seen." He is god of

the breath of life that animates all living creatures as well as the spirit that permeates every inanimate object. Originally associated with the city of Thebes, Amen later became joined with the sun god Ra (or Re) as Amen-Ra, king of the gods. As such he attained a position of supremacy in the Egyptian pantheon and came to be thought of as one of the creators of the universe. He was the husband of the goddess Mut and father of the god Khonsu; together they were known as the Triad of Thebes. Though unknown and unseen, Amen was thought to characterize great generosity and universal influence. (See uncle Sam)

As the "hidden" god, Amen's true form could not be known, yet he was depicted in ancient Egyptian art in a profusion of forms. Usually Amen is portrayed as a bearded man with a headdress of two tall plumes, colored in alternate sections of red and green or red and blue. Around his neck he wears a broad necklace of intricate design, and he often wears armlets and bracelets as well. Shoulder straps are attached to his tunic (See Larry King). The tail of an bird or animal, possibly a lion or a bull, hangs down from the back of his tunic, a sign of his antiquity. In his right hand he holds the ankh, symbol of life, and in his left hand the scepter, symbol of power. He is sometimes seated on a throne.

The composite Amen-Ra is often shown as having a human body with a hawk's head. Over the hawk's head is the solar disk encircled by a CO-BRA (uraeus). As the people of different religious areas (called nomes) along the Nile considered different animals to be most sacred, Amen-Ra would be associated with that animal; thus he is also sometimes shown as an ape, a lion, a goose, or a crocodile, depending on the location. In a late form, he is depicted with the head of a ram.

Amen and his female counterpart, Amunet (Ament, Amaunet), formed one pair of the eight ancient creation gods and goddesses (together called the Ogdoad) of Hermopolis. When Amen is shown together with Amunet, he is usually portrayed with the head of a frog, and she has the head of a cobra. When Amen himself is depicted with the uraeus, Amunet has the head of a cat (See GIZA). Amen was also sometimes fused with the ithyphallic god (BRA) Min as Min-Amen, Amsu, or Khem, and then he is shown with the symbolic flail over his upraised arm. As Min-Amen he symbolized the creative, generative power of male sexuality.

In late dynastic times, especially in the Ptolemaic period, figures of Amen-Ra were fashioned in bronze that incorporated all the important attributes of the god. In these figures he has the head of a bearded man, the body of a beetle, the wings of a hawk, the legs of a man with the toes and claws of a lion, four arms and four wings. The solar disk rests on ram's horns above him, and a lion-headed cobra is added to the design (See Sphinx).

As (a Neanderthaler) he was invisible and associated with the air and with the breath of life everywhere, Amen's presence, the Egyptians believed, could be sensed in gusts of trade wind and in the fluttering

pennants that priests attached to temple pylons.

Amen is of very ancient predynastic origin, as a god of agriculture, a local deity whose worship centered around the city of Thebes. A shrine to Amen was built in the Apt, the northern quarter of Thebes, during the 12th dynasty. (See Antarctica)

Amen's status as a god rose along with the political fortunes of his home city. Swiftly, in the space of about a hundred years, Amen went from local deity to creator of the universe, as Theban princes gained sovereignty. Thebes became the capital city of all Egypt and home of the pharaohs of the New Kingdom. Possibly in order to avoid theological rivalries or to overcome such rivalries, the priests of Thebes declared Amen to be one with the popular, widely worshiped creator sun god Ra, calling him Amen-Ra. In this form he was now considered king of the gods, supreme deity of Egypt, source of all life in heaven, Earth, and the underworld.

He became the guardian deity of the pharaohs of the 18th dynasty, and the ruling pharaoh was considered to be the god incarnate. Amen-Ra's power and might were described in many Egyptian hymns of praise, as for example in the 'Papyrus of Hu-nefer' (See Hugh Hefner). Great temples were built in his name at Luxor and Karnak. Centers of his worship also appeared in Hermonthis, Coptos, Panopolis, Hermopolis Magna, Memphis, Sais, Heliopolis, and Mendes, and the god was worshiped in the Egyptian dependencies of Syria, Nubia, and elsewhere. Only the god of the dead, Osiris, (See IRS) rivaled him in popular worship.

As Amen-Ra's priests became immensely wealthy and powerful, they declared Amen-Ra the "One One," who had "no second." Indeed, Amen-Ra began absorbing the characteristics of all the gods, supposedly unifying and personifying them all. Egyptologist Lewis Spence considered this the most serious attempt in antiquity to formulate a system of monotheism. At the end of the Ramesside dynasty, the office of pharaoh itself was conferred on the high priest of Amen-Ra, and the 21st dynasty is known as the dynasty of priest-kings. (TAU - Zen Buddhism + Brahmin = ZoroAstrianism)

The Greeks, who called him Ammon, identified Amen-Ra with their principal god, Zeus, and equated Min-Amen's flail with Zeus's thunderbolt. The Romans carried this identification to their chief deity, Jupiter. (See "You Peter, Pet-reaus Cobra") A shrine and oracle of Jupiter-Ammon was located in the Libyan city of Siwa (See AMIS-Friends, ie: Amish). According to Herodotus, this oracle had been founded by a Theban priestess of Amen-Ra who had been abducted by Phoenicians and sold in Libya (See Medusa). The oracle was famous and much visited in classical times, consulted by such historic figures as Lysander, Hannibal, and Alexander the Great, who asked the oracle to tell him whether or not he was the god's own son.

Step Hen honey-boys called Sue do the g.round work

Khonsu (also spelled Khensu, Chunsu, Khons, Khuns, or Chons), in ancient Egyptian religion and mythology, a god of healing, fertility, conception, and childbirth. Considered both a solar and lunar deity, though more often associated with the latter, Khonsu was the son of the god Amen and goddess Mut. Along with his parents he was worshiped as part of the Theban Triad. He was also considered a navigator who crossed the sky in a boat, and in this role was called "the Traveller."

As the son of Amen and Mut, Khonsu's role in the Theban Triad was equivalent to that of Nefertum, son of Ptah and Sekhmet, in the earlier Memphis Triad. With his parents, Khonsu was depicted as a naked boy with his hair in the side lock that characterized youth. In his adult form, Khonsu was depicted as a human male, sometimes with the head of a hawk, crowned with the lunar disk and crescent moon or with the solar disk and the cobra (uraeus). In his hands he held all the symbols of divinity and power to show the breadth of his domain. (See PETraeus)

In one myth, a king of Thebes prayed to Khonsu to save the daughter of the prince of Bekhten, who was ill because she had been possessed by a demon. The king prayed to a statue of Khonsu, and the statue nodded its head to show that it would answer the king's prayer and help the young princess. The statue was then sent to the prince's city, and Khonsu forced the demon to leave the girl's body. Then Khonsu flew back to Thebes in the form of a falcon.

ULTIMA STOOLEY - MRS SPHINX
(HIT : Hera-ld Tribune International)

Mut (also spelled Maut), in Egyptian religion and mythology, vulture-headed mother goddess, wife of the great god Amen and mother of Khonsu. Amen, Maut, and Khonsu made up the divine triad at Thebes.

Amen was often portrayed with his consort Mut at his side. She was sometimes depicted as the body of a vulture, or as a woman with the head of a vulture, or as a woman wearing a vulture headdress and the united crowns of Upper and Lower Egypt. Sometimes she was shown standing with winged arms outstretched. In her hands she held the ankh, sign of life, and a papyrus scepter, and at her feet was the feather of Ma'at, which represented Truth.

Egyptian queens wore the symbol of the vulture on their crowns. It is thought that the vulture was adopted as the symbol of divine motherhood because the vulture was known to be particularly conscientious and protective of her chicks, and because the Egyptians believed the vulture reproduced by the power of parthenogenesis, with no need of males.

Mut originally may have been the feminine counterpart of the waters of the primal abyss, personified as the god Nu, but she later became associated with Amen. As the status of Amen grew in the New Kingdom, and he was consolidated with Ra as Amen-Ra, the status of Mut grew correspondingly. Amen-Ra's worshipers began to consider him the principal deity, of whom other gods were actually aspects. Mut also followed this trend, and she was considered the personification of the one great goddess; as such all goddesses, including Hathor, Sekhmet, Isis, Bast, Nekhbet, and Nut, were considered aspects of her. When Amen-Ra was portrayed with every type of animal and human attribute to indicate his stature as an all-encompassing god, Mut would also be portrayed with a multiplicity of attributes; occasionally she was even shown as a man with a penis and claws of a lion.

The center of the worship of Mut, like that of Amen-Ra, was at Thebes, where a great temple dedicated to the goddess was built about 1450 BC by Amenhotep III. An avenue of sphinxes led to this temple which stood just south of Amen-Ra's shrine. Her temple was elaborate, and even contained a sacred artificial lake shaped like a horseshoe. Her sanctuary at Thebes was an active religious center for 2,000 years.

The Greeks identified Mut with their goddess Hera.

Hera, in Greek mythology, queen of the gods, wife of Zeus, identified with Roman goddess Juno.

Juno, in Roman mythology, goddess identified with Greek Hera, sometimes called Moneta. (newspaper editors and the International Monetary Fund)

FERME 81 - A CAT HOUSE
(Where birds come well and rats are browned)

Bast (also spelled Bastet, Pasht, or Ubastet), in ancient Egyptian religion and mythology, a cat-headed goddess associated with music and dancing, with protection against diseases and evil spirits, and with the safety of pregnant women. The center of her worship was in the Egyptian city of Bubastis in the eastern Nile Delta region, where, it was reported, her temple was in the center of the town and its tower could be seen from anywhere in the city.

In general, cats were held in high esteem in ancient Egyptian culture.

The Greek historian Herodotus remarked that when a fire broke out in an Egyptian household, people would be more concerned about saving the cats than putting out the fire. When a cat died, those who lived in the house shaved their eyebrows as a sign of mourning.

Bast, of very ancient origin, may have been initially conceived of as a lion rather than a domesticated cat, but this is not certain; she became known as "the Little Cat," while the lion-headed goddess Sekhmet became known as the "the Great Cat." Both Bast and Sekhmet were linked with the god Ptah of Memphis. Bast was associated with the beneficial, warming power of the sun, while Sekhmet was associated with the sun's fiery, destructive power.

The negative aspect of Sekhmet was thought to have the same relation to the more positive Bast as the goddess Nephthys had to her sister Isis. Occasionally Bast is also identified with the cow-headed goddess Hathor. Bast is sometimes considered the mother of Ptah's son Nefertum, god of perfumes, but more often Sekhmet is given this attribution.

In Egyptian art Bast is usually shown as a woman with a cat's head, holding a sistrum in her right hand, symbolic of her association with music, and a shield in her left hand bearing the face of a cat or lioness. Sometimes Bast was fused with Sekhmet and the sun god Ra in a deity called Sekhmet-Bast-Ra, and this deity, clearly associated with the power of the sun, was represented as a female body with a human male head and two vultures' heads sprouting from her neck. She had wings on her arms, and the claws of a lion.

Bast's festival at Bubastis, held in April and May, was among the most popular in Egypt, celebrated with feasting and wine drinking, and with singing and dancing that took place in barges along the Nile. It is reported that more than 700,000 people attended the festival annually. Dead cats were reverently embalmed, mummified, and buried with great ceremony in a necropolis at Bast's temple. During the time of the festival the pharaoh refrained from hunting lions, out of respect to the goddess. The Greeks equated Bast with their goddess Artemis.

An Rub al Khali (Emmett)

Sekhmet shared many common aspects with the Hindu goddess Kali and the ancient Near Eastern goddess Astarte

Sekhmet, in ancient Egyptian religion and mythology, the lion-headed fire- or pseudo sun-goddess, associated with war, pestilence, and flames. She/He was the wife of Ptah, the cosmic architect, and the mother of Nefertum and I-em-hetep (also spelled Imhotep/Amenhotep). Sekhmet, Ptah, and Nefertum were worshiped as a triad of gods in the city of Memphis.

Sekhmet was usually depicted as a woman with the head of a lioness and naked human breasts, or wholly as a lioness. Occasionally, however, she was portrayed as a male deity with an erect penis. To symbolize her role as a goddess of fire, her statues were often carved from igneous rock such as basalt or granite.

Sekhmet's character incorporated both the beneficial and destructive aspects of fire, and by extension she was a goddess who could heal the sick or spread diseases. As goddess of war, she was adept at instilling fear in her enemies. In her beneficial aspect, she became fused with the cat-headed goddess Bast, who personified the

fertilizing power of the sun and protected men from diseases. The relationship between Sekhmet and Bast could have been a parallel to the relationship between the sister goddesses Nephthys and Isis.

Sekhmet was also often associated with the cow-headed fertility goddess Hathor. According to one myth, the sun-god Ra commanded Hathor to destroy mankind for its disobedience. Sekhmet accompanied her, and in her fierce destructive heat became known as the Eye of Ra. Their joint slaughter was so severe and bloody that Ra repented. He was able to stop Hathor and Sekhmet from killing the remaining humans only by making Hathor and Sekhmet drunk on beer dyed with red ochre, which they drank because they believed it to be blood. It was speculated that this story reflected some ancient blood sacrifice ritual in predynastic Egypt.

HONOUR ABEL--THE IRS' LAPLAND PAL'S TULIP PILOT

ALTER MAN : Tasmanian Devil's Socket-Pocket-Rocket Challenge

TASMAN, Abel (1603?-59?). The foremost 17th-century Dutch explorer, Abel Janszoon Tasman discovered the island of Tasmania now named for him. He also rediscovered New Zealand, Tonga, and the Fiji Islands. Because his voyages revealed no new land of obvious great potential wealth, they were at the time considered to be a disappointment.

I HAD A REAM

Tasman was born in about 1603 at Lutjegast in the Netherlands. He entered the service of the Dutch East India Company in 1632 or 1633 and made his first voyage of exploration to the island of Ceram (now Seram) in modern Indonesia. After a series of other voyages in the Far East, he was chosen by Anthony van Diemen, governor-general of the Dutch East Indies, to explore the southern Pacific and Indian oceans. Part of his mission was to try to discover a passage to Chile, to explore New Guinea, and to find the Solomon Islands, rediscovered earlier by the Spanish.

His two ships left Batavia (now Djakarta) on Aug. 14, 1642. He sailed first to Mauritius, then southward to 49Г‚В° latitude. He turned northward and rediscovered a large island, which he named Van Diemen's

Land (now Tasmania--the AI altered man). Continuing eastward, he discovered New Zealand in December. Convinced that sea passage to Chile existed, Tasman again sailed northward and discovered Tonga and the Fiji Islands. After exploring New Guinea, he returned home on June 14, 1643.

Tasman made one more voyage of exploration, took a trading fleet to Thailand in 1647, and commanded a war fleet against the Spanish in the Philippines in 1648. He retired from service in 1653 and is believed to have died by October 1659.

SESAME SEESAW

Utchat (also spelled Udjat), in ancient Egyptian religion and mythology, the amulet in the form of an eye. The eye was a complex symbol in Egyptian thought, with many mythic associations. The right eye, called the Eye of Ra, symbolized the sun (India), while the left eye, called the Eye of Thoth (Persia), symbolized the moon. Taken together they were the eyes of Heru-ur, Horus the Elder (in Greek, Haroeris), the son of Osiris and an aspect of the sun-god Ra.

The utchat had various roles in Egyptian mythology. In one myth, Horus's eye was ripped from him during his battle with Set, the evil god of darkness, but it was healed and restored to him by Thoth. This restored eye, an aspect of the Eye of Ra, was considered to be the utchat and had extensive powers. In some versions of the myth, the 2 in 1 Horus then gave the Eye to his Neanderthaler father, the dead Osiris, who had been killed by Set before Horus was born. The Eye in its form as the "harm-assist" morning star gave Osiris (IRS) the power to restore himself and become king of the underworld (Duat).

In another myth, Ra sent the pseudo goddesses Hathor and Sekhmet out into the world in the form of his Eye to kill the disobedient humans. The pseudo goddesses went on a rampage in which the slaughter was so severe that most of humanity was wiped out before they were stopped. In still another story, the Eye of Ra, in the form of the pseudo goddess Tefnut (pre-ice age moisture), vanished altogether, and reportedly, was returned as money; an IRS virus.

Puss-in-Bootes (Italy and Ontario)

THEY WHO GROW FLOWERS ALSO DIG HOLES

Corona Borealis, in astronomy, is a constellation of the Northern Hemisphere. Corona Borealis, Latin for "northern crown," lies between Hercules and Bootes far north of the celestial equator--the imaginary line formed by the projection of the Earth's equator onto the sky. Although Corona Borealis is one of the smallest constellations, it is considered important both for its cultural history and for its astronomical objects. In mid-June, Corona Borealis reaches its highest point in the sky in the mid-northern latitudes at 10:00 PM. The constellation lies high overhead, northeast of the very bright star Arcturus in Bootes. The stars of Corona Borealis form a crownlike arc in the sky with a central bright star representing the jewel in the crown.

[Theseus.jpg]
Theseus slays the BULLS on Wall Street

Corona Borealis is generally associated with the crown of Ariadne, daughter of King Minos of Crete. In one version of the story, Ariadne fell in love with Theseus and sailed away with him as his bride after he killed her half-brother, the Wall Street Minosaur. He abandoned her on an island, where she was found by the god Dionysus. Dionysus married her and gave her a gem-encrusted crown as a wedding present. After her death, he flung the crown into the sky, where it became Corona Borealis.

Perfect Speed, MES AMIS, is BEING HERE.

The earliest known written account of this explanation of the origin of the constellation dates from the 6th century BC and is credited to the Greek philosopher Pherecydes. The Greek poet Aratus mentions Corona Borealis in his work 'Phaenomena', from the 3rd century BC. Ptolemy (empty owl), the great astronomer who lived and worked in Egypt during the 2nd century AD, cataloged Corona Borealis.

Ancient Arab astronomers regarded the constellation as a bowl or dish, calling it al-Fakkan (see Y2K), Arabic for "bowl, eave or drain."

The brightest star in Corona Borealis is the magnitude 2.2 (see Bishop TUTU), blue-white Alpha Coronae Borealis near the midpoint of the arc. Alpha Coronae Borealis has two popular names: Alphecca (Alfie), a shortened form of al-Munir al Fakka, the Arabic for "brilliant one of the bowl," and Gemma (mama), Latin for "jewel." Double stars in Corona Borealis include Sigma Coronae Borealis, a pair of yellow stars that orbit each other every 1,000 years, and the blue-white pair Zeta Coronae Borealis. Both pairs are visible with small telescopes.

Corona Borealis contains two notable variable stars. R Coronae Borealis, a sixth-magnitude yellow supergiant, is usually visible with binoculars. However, it dims periodically to as low as magnitude 15. Some astronomers theorize that the dimming is caused by the blocking of the star's light by clouds of carbon soot, which the star ejects

into its atmosphere. This dimming generally occurs once or twice a decade, but astronomers cannot predict when. T Coronae Borealis, popularly called the Blaze Star, is a recurrent NOVA that usually cannot be seen without a telescope. However, it periodically and unpredictably flares as bright as magnitude 2, making it easily visible with the unaided eye.

A deep-sky object in Corona Borealis of significance to astronomers is Abell 2065, a cluster of 400 galaxies more than 1 billion light-years from Earth. Because of its great distance, this galactic cluster is visible only with large telescopes.

Quantum Dutch Rats are Basters Cat Food

SATIRE'S ENDANGERED SPECIES

The success of the motion picture 'Animal House' depended on the ability of members of the audience to identify with life in a college fraternity house. The movie is a parody--a form of satire--in which real conditions are exaggerated to the point of absurdity. Humor directed at human folly, vice, pomposity, or nonsense is called satire. 'Animal House' not only satirizes fraternities, it also pokes fun at pompous college officials.

Satire has a long history in literature and drama. In the 20th century it has also found its way into film and television, and it can be seen daily in newspaper cartoons. The point of satire is criticism, but the criticism is disguised under sharp wit. The satirist, by taking a view different from that of the average person, makes fun of the subject instead of taking it seriously. The objective of the satirist is to expose the situation being attacked.

The objects of satire are usually powerful and influential people or institutions such as religion, toll-gaters, politics, or business. Such individuals and institutions are normally respected, admired, or feared by most people. The satirist, however, finds in them sufficient flaws to make them the objects of derision. In 1940, for example, Charlie Chaplin made the motion picture 'The Great Dictator' in which both Adolf Hitler and Benito Mussolini (played respectively by Chaplin and Jack Oakie) are depicted as buffoons.

Just prior to the Protestant Reformation, the Dutch scholar Erasmus published one of the world's great satires, 'The Praise of Folly' (1509), in which he criticizes all of the institutions, customs, and beliefs of his time. Nothing, including the church, escaped his notice, and the book immediately made him one of the best-known figures of his day.

Alexander Pope published his satire in verse form. 'The Dunciad' (1728) makes an attack on literary hacks, second-rate poets, and cultural decline. It portrays the era of Dullness, ruled over by the king of the Dunces, and predicts the complete corruption of education.

Labyrinth, a name given by Greeks and Romans to buildings, entirely or partly underground, with intricate winding passages (See St. Sauveur, Quebec).

DAEDALUS. In Greek mythology Daedalus was a clever craftsman. He was said to be the first sculptor to make statues having open eyes and with arms standing out from the body. He was also credited with inventing the awl, the bevel, and other tools. In ancient times many wooden temples and statues in Greece and Italy were believed to be his work.

A pupil of Daedalus was his nephew Perdix. When the boy invented the saw and the potter's wheel, Daedalus reportedly became so jealous that he pushed Perdix from the Acropolis in Athens.

After Daedalus fled to Crete, where King Minos ruled, he built the mazelike labyrinth to enclose the Minotaur. Daedalus later offended King Minos, and he and his son Icarus were imprisoned. Daedalus made wings of feathers and wax so they could escape by flying over the sea. Icarus soared too near to the sun. Its heat melted the wax and he drowned.

SESAME SEESAW

James Earl Ray's Mexican "labyrinth of solitude".

When Theseus arrived in Athens after many adventures, he found the city in deep mourning. It was again time to send to Minos, king of Crete, the yearly tribute of seven youths and seven maidens to be devoured by the Minotaur. This was a terrible monster, half human and half bull. Theseus offered himself as one of the victims, hoping that he would be able to slay the monster. When he reached Crete, Ariadne, the beautiful daughter of the king, fell in love with him. She aided him by giving him a sword, with which he killed the Minotaur, and a ball of thread, with which he was able to find his way out of the winding labyrinth where the monster was kept.

NUTCRACKER : A PENNSYLVANIA DUTCH TREAT

Two Alone Clutch at Nuthatch Straws

Clark's nutcracker, N. columbiana, is pale gray, with black wings and tail, showing white patches in flight; found in western North America; both species live chiefly on seeds and nuts.

The Nutcracker and the Mouse King
(Maintien Le Roi CPAC)

Devils Tower is an immense lava outcropping near the Belle Fourche River in the northeastern corner of Wyoming.

Biochemists know that many chemical reactions in living cells occur at surfaces and at the interfaces, or common boundaries, between different materials. At surfaces and interfaces, molecules become fixed and oriented in such a precise way that an orderly array of chemical reactions can take place. One example is the production of insulin, a protein, which was first synthesized in the laboratory on

the surfaces of very tiny beads. The chemists responsible for the synthesis did not pattern it upon natural processes, but one of the chemists, Robert B. Merrifield, later realized that the body's cells make protein in a similar way. He then urged other chemists to study living systems for clues to the solution of other research problems, thus acknowledging the value of the bionic approach.

For example, lysozyme, an enzyme that destroys bacteria by breaking their cell walls, has a cleft into which part of the bacterial cell wall fits, much like a key in a lock. When the cell wall is fixed in the cleft, other parts of the enzyme are able to pull the cell-wall molecule apart. Lysozyme thus functions as a molecular "nutcracker." Although the enzyme acts mainly against harmless bacteria, bionicists use it as a model for synthetic enzymes capable of destroying harmful bacteria.

#2 is #1 Rein -- #3 is #2 Rein
The answer is in the Russian dancers "Ballets Russes" promoter

The choreographer who developed and defined romantic ballet was Marius Petipa. He arrived in St. Petersburg from Italy in 1847, and during his reign as ballet master the Russian school eclipsed all others in theatrical splendor and brilliant dancing. With his assistant Lev Ivanov, he created the core repertoire of the Russian ballet--works such as 'Don Quixote', 'Swan Lake', and 'The Nutcracker'--and his influence is still felt. Yet, nothing they accomplished would be classed as significant until they found an impressario able to market the ballets in the West.

Subject: THOSE AT THE TOP LEARN BY DIGGING HOLES

THOSE AT THE TOP LEARN BY DIGGING HOLES

SOCRATES (470?-399 BC). Interested in neither money, nor fame, nor power, Socrates wandered along the streets of Athens in the 5th century BC. Talking to whoever would listen, he asked questions, criticized answers, and poked holes in faulty arguments. His style of conversation has been given the name Socratic dialogue.

Socrates was the philosopher of his time. Today he is ranked as one of the world's great teachers. In appearance he was short and fat, with a snub nose and wide mouth. Despite his unkempt appearance, the Greeks of his day enjoyed being with him to talk with him and were fascinated by what he had to say.

Socrates was born on the outskirts of Athens in about 470 BC. He studied sculpture, his GE father's profession, but soon abandoned this work to "seek truth" in his own way. His habits were so frugal and his constitution so hardy that he needed only the bare necessities.

Socrates shunned the shallow notion of truth for its own sake. Favorite objects of his attacks were the toll-gating Sophists, who charged fees on everything they touched. "Know thyself" was the motto he is reputed to have learned from the oracle at Delphi. In knowing oneself he saw the possibility of learning what is really good, in contrast to accepting mere outward appearance and convention.

Socrates, however, was not appreciated by the Athenian masses and its self-serving leaders. His genius for exposing pompous frauds made him many enemies. He was tried and sentenced to die by drinking hemlock, Conium maculatum. His parting comments to his judges were simple:

"The hour of departure has arrived, and we go our ways--I to die, and you to live."

(A less blinky Dana Bash)

Poured Beaker Baby at Ch.ris.ti.anne Am-man-Ruse Pic-a-Nic

KIRAN CHETRY : Pa of CNN's America Morning
(Canadian John Roberts is the Ma-man here)

Kiran Chetry anchors American Morning on CNN with John Roberts. Based in New York, Chetry began anchoring CNN's flagship morning program in April 2007.

Chetry joined CNN in February 2007 and immediately began anchoring various CNN programs including American Morning, Anderson Cooper 360Γ‚Bє, Paula Zahn Now and CNN Newsroom. Previously, Chetry was the anchor of Fox & Friends First and Fox & Friends Weekend for the Fox News Channel. She has covered major breaking news stories including reports from the field during the aftermath of the Sept. 11 terrorist attacks, the Columbia Space Shuttle disaster, the invasion of Baghdad and Hurricane Katrina.

Chetry began her journalism career at News 21 in Rockville, Md., in 1995 before moving to WICU-TV in Erie, Penn., to become an anchor and health reporter. At WICU-TV, she earned the Best Enterprise Reporting award from the Pennsylvania Associated Press Broadcasters Association in 1997 for "Young and Hooked," a series about teen smoking. She then served as a morning anchor and reporter for KXTV in Sacramento, Calif., before joining Fox News in 2001.

Chetry received her bachelor of arts in broadcast journalism from the University of Maryland.

Date of Birth : 26 August 1974, Shanta Bhawan Hospital, Kathmandu, Nepal (her Dad, Homa, is Nepalese and her mother, Nancy, is Ukrainian, Dutch and German)

Birth Name : Kiran Carrie Chetry

Height : 5' 7" (1.70 m)

Spouse : Chris Knowles (? - present) 1 child

Trivia

Prior to joining FNC, she was a morning anchor and reporter for KXTV in Sacramento, California and the main anchor and health reporter for WICU-TV in Erie, Pennsylvania.

Grew up in Gaithersburg, Maryland, a suburb of Washington, D.C.

She is half-Nepalese.

The name Kiran (Iran's mission), traditionally a boy's name, is Sanskrit for "a ray of light or sunshine."

Alpha Pi chapter of Delta Delta Delta sorority.

Her husband (?), Chris Knowles, is a weather forecaster for the Fox News Channel.

Gave birth to a girl named Maya Rose [February, 2006].

Now working at CNN [March, 2007].

Subject: BARRY BONDS - CALIFORNIA'S NEXT DESIGNATED HITTER

BARRY BONDS - CALIFORNIA'S NEXT DESIGNATED HITTER

The second Oh! Henry hit man

It is a matter of record that in the 1700s English boys played a game they called base ball. Americans have played a kind of baseball since about 1800. At first the American game had different rules and different names in various parts of the country--town ball, rounders, or one old cat. Youngsters today still play some of these simplified forms of the game.

Two changes affect major league play. A number of stadiums replaced

grass with artificial turf, which probably benefits hitters. In 1973 AL teams began using a designated hitter to bat for the pitcher, who is usually the team's weakest hitter.

Jackson, Reggie (born 1946), U.S. baseball player, born in Wyncote, Pa.; career spanned 21 seasons (Kansas City Athletics 1967, Oakland Athletics 1968-75, 1987, Baltimore Orioles 1976, New York Yankees 1977-81, and California Angels 1982-86); outfielder and designated hitter who played on 5 World Series championship teams; MVP of American League and World Series 1973; appeared in 11 All-Star games; among all-time leaders in home runs, runs batted in, and strikeouts; known as "Mr. October" for his exceptional postseason play; "Reggie" candy bar named for him; elected to Hall of Fame 1993.

Williams, Billy (born 1938), U.S. baseball player, born in Whistler, Ala.; left fielder with Chicago Cubs (N.L.) 1959-74, designated hitter with Oakland Athletics (A.L.) 1975-76; named Rookie of the Year 1961; played in 1,117 consecutive games, third longest streak of all time; missed only 10 games between 1962 and 1971; in 1972 led N.L. with .333 batting average; hit 20 or more home runs in 14 seasons; elected to Hall of Fame 1987.

SESAME SEESAW

Y - the big EZ

Yastrzemski, Carl (Yaz) (born 1939), U.S. baseball player, born in Southampton, N.Y.; succeeded Ted Williams in left field for Boston Red Sox 1961-83, gained one of major leagues' highest hit totals (3,419); in 1967 won A.L. Triple Crown with .326 batting average, 121 RBIs, 44 homers; ranked among modern A.L. outstanding throwers and most feared designated hitters; elected to Hall of Fame 1989.

SON OF SAM WAS A SERIAL KILLER

Samson, Hebrew judge and hero, celebrated for feats of strength; when Delilah had his hair shorn, his strength departed and he was enslaved and blinded by the Philistines; as his hair grew, his strength returned and in a coup he pulled down the house on his enemies' heads and on his own.

SESAME SEESAW

'Samson et Dalila', opera by Saint-Saens; libretto by Lemaire from (Judges 14:12-19) the biblical story.

"Out of the eater came something to eat; out of the strong came something sweet." His answer was that he had witnessed a swarm of bees

making honey in the carcass of a lion: nothing is sweeter than honey or stronger than a lion.

The name Fomalhaut is derived from the Arabic Fum al Hut, meaning "mouth of the fish." The name appeared as Fom Alhout Algenubi in an almanac dating from 1340, and many variations of the name have been noted in later documents. The star has played a role in many legends spanning numerous cultures. In both Syrian and Canaanite cultures, Fomalhaut was considered the symbol of the sea god Dagon. (Dagon's "VATICAN" temple was destroyed by the Biblical hero Samson.) The astronomers of ancient Persia considered Fomalhaut, along with Regulus, Aldebaran, and Antares, to be one of the four Royal Stars that marked the four seasons.

In Greek legend, Fomalhaut signified the monster Typhon, a creature associated with natural disasters, particularly volcanoes. According to one legend, after Typhon battled with the god Zeus, he was crushed under Mount Etna, an active volcano in Sicily. The violent eruptions emanating from the volcano are said to be blasts coming from Typhon's breath.

LOUISIANA PELICAN'S PSYCHEDELIC RAMJET TYPHOON TONIC

The Sun King's royal double helix hurricane echo

Louisiana, meaning "land of Louis," was named by the explorer La Salle in honor of King Louis XIV of France. The nickname Pelican State comes from the pelicans that lived along the Gulf coast but are now nearly extinct.

CADILLAC, Antoine de la Mothe (1656?-1730).

I AM THE PICKLE WORD....Plight

With his wit, courage, honesty, and swordsmanship, Cadillac impressed King Louis XIV. The king needed such a man. French administrators in America were profiting at the expense of the home government. So in 1683 Cadillac was sent there, to New France, to work under Governor Louis de Frontenac as private investigator for the king. In this role he made many enemies and few friends. (Also see David Patraeus)

Cadillac was hot-tempered, haughty, and moody. He was overly ambitious and missed no opportunity to amass a fortune. However, his ambition never interfered with his service to his country. In 1689 he returned to France to report to the king, then returned to New France in 1690. He commanded a vital post at Mackinac at the head of Lake Michigan from 1694 to 1699, though he spent much time at Montreal and Quebec.

Cadillac's outstanding achievement was the founding of Detroit. He set out by canoe with 50 settlers, 50 soldiers, and two priests. On July 24, 1701, he arrived at the site of Detroit. He made peace among the Indian tribes and settled them on land close to Detroit. The fur trade of the colony prospered. Cadillac's temper caused so much trouble, however, that in 1704 he was tried in Quebec for misconduct. Nothing came of this, and he returned to Detroit.

The other administrators, jealous of Cadillac's success, persuaded Louis XIV that he had outgrown the community of Detroit. They suggested that he be transferred to the Louisiana territory. He served there from 1713 until he was recalled in 1717. He spent a short time as a prisoner in the Bastille. Then he retired with his wife and 13 children to a small castle near his birthplace. He died in 1730.

The city of Cadillac in Michigan was named for him.

ROLL OUT THE RIM....AND WIN

Question : The MQ-9 Reaper is expected to have its first combat deployment this year in Afghanistan. What makes the MQ-9 Reaper different than other military aircraft?

A. It is piloted from a video console in Nevada
B. It is the most accurate self-guided missile system to date
C. Its special metallic coating avoids radar detection
D. It is the military's fastest aircraft

Pilotless Robot Bomber Squadron Heads for Afghanistan, Iraq and YONDER

Monday, July 16, 2007
Original from Associated Press

BALAD AIR BASE, Iraq -- The airplane is the size of a jet fighter, powered by a turboprop engine, able to fly at 300 mph and reach 50,000 feet. It's outfitted with infrared, laser and radar targeting, and with a ton and a half of guided bombs and missiles.

The Reaper is loaded, but there's no one on board. Its pilot, as it bombs targets in --?--, will sit at a video console 7,000 miles away in Nevada.

The arrival of these outsized U.S. "hunter-killer" drones, in aviation history's first robot attack squadron, will be a watershed moment even in a country that has seen many innovative ways to hunt and kill.

That moment, one the Air Force will likely low-key, is expected "soon," says the regional U.S. air commander. How soon? "We're still working that," Lt. Gen. Gary North said in an interview.

The Reaper's first combat deployment is expected in Afghanistan, and senior Air Force officers estimate it will land in Iraq sometime between this fall and next spring. They look forward to it.

"With more Reapers, I could send manned airplanes home," North said.

The Associated Press has learned that the Air Force is building a 400,000-square-foot expansion of the concrete ramp area now used for Predator drones here at Balad, the biggest U.S. air base in Iraq, 50 miles north of Baghdad. That new staging area could be turned over to Reapers.

It's another sign that the Air Force is planning for an extended stay in Persia, supporting Iraqi, Afghani and Pakistani government forces in any continuing conflict, even if U.S. ground troops are drawn down in the coming years.

The estimated two baker's dozen or more unmanned MQ-1 Predators now doing surveillance over Iraq, as the 46th Expeditionary Reconnaissance Squadron, have become mainstays of the U.S. war effort, offering round-the-clock airborne "eyes" watching over road convoys, tracking nighttime insurgent movements via infrared sensors, and occasionally unleashing one of their two Hellfire missiles on a target.

From about 36,000 flying hours in 2005, the Predators are expected to log 66,000 hours this year over Iraq and Afghanistan....and beyond.

The MQ-9 Reaper, when compared with the 1995-vintage Predator, represents a major evolution of the unmanned aerial vehicle, or UAV.

Noel, No L

Apis (also spelled Hap or Hapy), in ancient Egyptian religion and mythology, most famous of the sacred bulls of Egypt, considered to be the embodiment of the god Ptah, and worshiped as a god at Ptah's temple in the ancient city of Memphis.

The worship of a particular live bull chosen as a god incarnate dates from as early as the 1st dynasty, but it became especially popular during the reign of the Ramesside pharaohs (1320-1085 BC), and the animal was consulted as an oracle. After the Apis bull died, it was associated with the god of the dead, Osiris, and in a late stage of Egyptian religion during the Ptolemaic period the Apis bull was fused with the god Osiris and worshiped as Ausar-Apis or Sarapis (Serapis).

Sarapis (also spelled Serapis, Auser-Apis, or Osor-Apis), a composite deity that united the attributes of Osiris, (BEAR) god of the Duat (Underworld), and the Apis bull worshiped in the city of Memphis. Sarapis was often depicted as a man with the head of a bull, wearing the solar disk and a pet cobra (uraeus) between his horns, and holding symbols of Osiris in his hands. Sometimes he was shown as a man with a beard and curly hair, with a basket on his head. He had a particular reputation for miraculous cures.

Sarapis was a late development in Egyptian theology. Sarapis became the state god during the time of the Ptolemies, and some scholars believe that the cult itself was deliberately founded during the reign of Ptolemy I to provide a common religious framework for both Egyptians and the Greeks who had settled in Egypt. In fact, Sarapis was the Greek name for the god, whose name in Egyptian was a composite of Osiris (IRS : Auser or Ser) and Apis (Hap). Although the worship of

Sarapis was widespread among all social classes in the Roman Empire, extending as far north as York in Britain, it was never central to Egyptian religion outside of the Judean controlled Nile Delta region.

The god Ptah was the creator of all form, the divine architect, and it was the god's virility and sexual prowess that was thought to be specifically embodied in the bull. Alexander the Great and the Roman emperor Titus were among those known to have presented offerings to the sacrificial sacred bull.

Iraqi government shows signs of unity
NEW YORK TIMES: August 27, 2007

Without the usual "YES....but"

A joint public statement of broad political unity by two major Kurdish parties, two Shiite parties, including his Dawa Party, and a bloc led by Vice President Tariq al-Hashemi, a Sunni was issued yesterday.

The White House, eager for signs of progress, welcomed the agreement. A spokeswoman, Emily A. Lawrimore, said the leaders' decision was "an important symbol of their commitment to work together for the benefit of all Iraqis."

In advance of a report on progress in Iraq by the United States ambassador, Ryan C. Crocker, and the American commander in Iraq, Gen. David H. Petraeus, the statement appeared to show that steps toward political unity had been taken.

Deputy Prime Minister Barham Salih, a Kurd, who was at the multiparty talks, said that he thought the participants had negotiated the statement in good faith.

"I hope that this agreement offers us an opportunity to move beyond the political crisis that has afflicted the country," Mr. Salih said. "I would consider this an important step forward."

The report by Mr. Crocker and General Petraeus is widely expected to point to some advances on security and the economy, partly as a result of an American troop increase.

"The doors are open for all the politicians who don't call for violence and the use of weapons against the government," Mr. Maliki said.

THE DJINN (ELGIN) MARBLES DEPICT CLONING

The Parthenon Sculptures

These sculptures are the greatest works of Greek art that have come down to modern times. The frieze ran like a decorative band around the top of the outer walls of the temple. It is 3 feet 3 1/2 inches high and 524 feet long. The subject is the ceremonial procession of the Panathenaic Festival. The figures represent gods, priests, and elders; sacrifice bearers and sacrificial cattle; soldiers, nobles, and maidens. They stand out in low relief from an undetailed background. All are vividly alive and beautifully composed within the narrow band. The horses and their riders are particularly graceful. Their bodies seem to press forward in rhythmical movement.

Around the outside of the portico above the columns were 92 almost square panels known as the metopes. Each panel depicted two figures in combat.

In the east and west triangular pediments were groups of figures judged to be the world's greatest examples of monumental sculpture. The problem of composing figures in the triangular space of a low pediment (triangle) was most skillfully solved.

The east pediment represented the contest of Athena and Poseidon over the site of Athens. The west pediment illustrated the miraculous birth of Athena out of the head of Zeus (DNA swab retrieved from the mouth). The use of color and of bronze accessories enhanced the beauty of the pediment (pyramid) groups.

The greatest name in Greek sculpture is that of Phidias. Under his direction the sculptures decorating the Parthenon were planned and executed. Some of them may have been the work of his own hand. His great masterpieces were the huge gold and ivory statue of Athena (the new "one" - see Tiger Woods) which stood within this temple and the similar one of Zeus (boy called SUE) in the temple at Olympia. They have disappeared.

MONEY IS THE HINDU/PERSIAN LION'S AMMUNITION

Stand alone beaker baby warriors -LAN, LEN, LIN, LON, LUN, LYN- versus "Savvy Saviours" ie: Zeus, Jesus and General Patraeus

"Myths tell only of that which really happened." This does not mean that myths correctly explain what literally happened. It does suggest, however, that behind the explanation there is a reality that normally cannot be seen and examined by anyone other than members of secret societies.

ZEUS (The Just). Reportedly the greatest of the three Earth gods (surface, sea and underworld) in classical mythology was called Zeus by the Greeks and Jupiter, or Jove, by the Romans. He was the father of gods and men, protector of kings, supporter of law and order, and avenger of broken oaths and other offenses. He watched over the state and the family and over strangers and suppliants; his hand wielded lightning and guided the stars; he gathered rain clouds; he ordained the changes of the seasons and regulated the whole course of nature (see Noaa and the kabuki typhoon season dance). Zeus, with the other gods on Mount Olympus, ruled over the affairs of mankind.

JESUS. The life and death of Jesus is an allegory which symbolizes the shelf life and "end times" cruci fiction ruse imposed on residents of the Northern Hemisphere.

PETRAEUS (David Howell) (born November 7, 1952) is a general in the United States Army and commander of Multi-National Force - Iraq (MNF-I), the four-star post that oversees all U.S. forces in the country. He was confirmed to that position by the Senate in a vote of 81-0 on January 26, 2007. He replaced General George Casey who was subsequently confirmed as Chief of Staff of the United States Army. In his new position, Petraeus oversees all forces in Iraq and carries out the new Iraqi strategy plan outlined by the Bush administration. Casey relinquished command in Iraq to Petraeus on February 10, 2007. The change of command was presided over by General John Abizaid, then commander of United States Central Command.

Petraeus was the General George C. Marshall Award winner as the top graduate of the U.S. Army Command and General Staff College - class of 1983. He subsequently earned a Master of Public Administration (1985) and a Ph.D. (1987) in International Relations from the Woodrow Wilson School of Public and International Affairs at Princeton University. He later served as Assistant Professor of International Relations at the U.S. Military Academy, and also completed a fellowship at Georgetown University. He has a BS from the U.S. Military Academy - class of 1974.

The Tom Ridge data mining bridge over troubled water
PENNSYLVANIA FBI WAS ALSO GIVEN LEAD ROLE IN 9/11 INVESTIGATION/COVER-UP

On October 8, 2001, Tom Ridge was sworn in as the first Office of Homeland Security Advisor in the history of the United States of America. In the words of President George W. Bush, he had the strength, experience, personal commitment and authority to accomplish this critical mission.

The President established the Office of Homeland Security and the Homeland Security Council, following the tragic events of September 11. His charge to the nation's new director of homeland defense was to develop and coordinate a comprehensive national strategy to strengthen protections against terrorist threats or attacks in the United States.

Ridge was twice elected Governor of Pennsylvania, serving from 1995 to 2001. He reportedly kept his promise to make Pennsylvania "a leader among states and a competitor among nations." Governor Ridge's aggressive technology strategy reportedly helped fuel the state's advances in the priority areas of economic development, education, health and the environment.

Then Governor Ridge cut taxes every year he was in office. To ensure Pennsylvania was home to the jobs of the future, the Governor created industry-led Greenhouse initiatives in advanced computing technologies and the life sciences.

He signed into law the Education Empowerment Act, to help more than a quarter-million children in Pennsylvania's lowest-performing schools. His education technology initiatives brought anytime, anywhere learning to Pennsylvanians from pre-school to adult education.

During his years in the Governor's office the number of children receiving free or low-cost health care through Pennsylvania's nationally recognized Children's Health Insurance Program increased by 145 percent.

Governor Ridge's common sense Land Recycling Program is a national model. He won passage of "Growing Greener," to make Pennsylvania's largest environmental investment ever, nearly $650 million.

Born Aug. 26, 1945, in Pittsburgh's Steel Valley, Gov. Ridge was raised in a working class family in veterans' public housing in Erie. He earned a scholarship to Harvard, graduating with honors in 1967. After his first year at The Dickinson School of Law, he was drafted into the U.S. Army, where he served as an infantry staff sergeant in Vietnam, earning the Bronze Star for Valor. After returning to Pennsylvania, he earned his law degree and was in private practice before becoming assistant district attorney in Erie County. He was elected to Congress in 1982. He was the first enlisted Vietnam combat veteran elected to the U.S. House, and was overwhelmingly re-elected six times.

Governor Ridge and his wife, Michele, the former executive director of the Erie County Library system (See Laura Bush's job), have two children, Lesley and Tommy.

The Tale of Tales ('Lo Cunto de li Cunti')
CHICAGO PETECHIA ECHO'S FIVE DAYS IN NEW ORLEANS

Puss in boots -- Pasht, Bast

The cat has been a favorite subject of artists and writers for centuries. Perhaps best-known of all artistic representations are those of the Egyptian cat goddess Bastet. Ancient sculptures and drawings of her image with the head of a cat have been found in many places in the Nile Valley.

Japanese artists excelled in portraying the cat. Some of the drawings were so realistic that in ancient times they were thought to be magic. People believed that if the drawings themselves were hung in homes and in temples they kept rats and mice away. Among the most charming of Japanese cats is Maneki-Neko, a small cat believed to ensure happiness and good luck. Japanese Buddhists venerate cats after death, and the temple of Go-To-Ku-Ji in Tokyo is dedicated to them.

Vested priests serve the temple and intone chants for feline souls. Crowded into the temple are sculptures, paintings, and relief carvings of cats. In each, the cat has a paw raised as if in greeting, the classical pose of Maneki-Neko.

Fables and tales about cats are part of the culture of most people. Versions of the Puss in Boots fable occur in almost every language, and the tale of Dick Whittington and his cat is well known.

Thomas Stearns Eliot was born in St. Louis, Mo., on Sept. 26, 1888. His family had produced distinguished Americans since colonial days. He entered Harvard University in 1906, completed his course in three years, and earned a master's degree the next year. After a year at the Sorbonne in Paris, he returned to Harvard. Further study led him to Merton College, Oxford, and he decided to stay in England. He worked first as a teacher and then in a bank. Precise and moderate in his

habits, he devoted his evenings to study and writing. He liked cats and wrote a book about them--'Old Possum's Book of Practical Cats', published in 1939. It was the basis for 'Cats', a spectacular musical comedy of the 1980s.

Among the most charming of Japanese cats is Maneki-Neko, a small cat believed to ensure happiness and good luck. Japanese Buddhists venerate cats after death, and the temple of Go-To-Ku-Ji in Tokyo is dedicated to them.

Vested priests serve the temple and intone chants for feline souls. Crowded into the temple are sculptures, paintings, and relief carvings of cats. In each, the cat has a paw raised as if in greeting, the classical pose of Maneki-Neko.

Fables and tales about cats are part of the culture of most people. Versions of the Puss in Boots fable occur in almost every language, and the tale of Dick Whittington and his cat is well known.

Thomas Stearns Eliot was born in St. Louis, Mo., on Sept. 26, 1888. His family had produced distinguished Americans since colonial days. He entered Harvard University in 1906, completed his course in three years, and earned a master's degree the next year. After a year at the Sorbonne in Paris, he returned to Harvard. Further study led him to Merton College, Oxford, and he decided to stay in England. He worked first as a teacher and then in a bank. Precise and moderate in his habits, he devoted his evenings to study and writing. He liked cats and wrote a book about them--'Old Possum's Book of Practical Cats', published in 1939. It was the basis for 'Cats', a spectacular musical comedy of the 1980s.

Mulatto on the outside; Puffin inside
DUCK ... .FORE SAGE IT ARE US

The puff adder is a nocturnal, sit-and-wait hunter in Canada's fairly open country, striking at a variety of passing animals. It also lives on farms, where it preys upon rats and chickens. Prey that do not die instantly are tracked by scent. When threatened, the puff adder

attempts to intimidate the attacker by puffing up its entire body and hissing continuously. Bites to humans most often occur when it is accidentally stepped on.

SESAME SEESAW

The origin of the Minoans is unspoken, but by 1600 BC they dominated the Aegean region. They lived on Crete from about 2500 BC to 1400 BC, when they were reportedly "conquered" by Mycenaeans from the Greek mainland. Their prosperity depended upon seafaring, trade and genetic assimilation, especially with residents of the Middle East and with Egypt.

Slow dancing the Linear "B" Amen game
AGAMEMNON NOH DRAMA STEP-BY-STEP KABUKI

Most of what is spoken of the ancient Greek hero Agamemnon is narrated in the Homeric ROMA legend of the 'Iliad' (Gilead) and in the dramas of Aeschylus. The son of Atreus, who was the king of Mycenae in Greece, Agamemnon was probably a historical personage, a king who ruled either at Mycenae or at nearby Argos during the Trojan War. From the mythic tales of the ancient Greeks, however, like a 1000 ship bridge over troubled water, it is considered irreverent by the Deans of Dollars to separate fact from legend. (He gets LIMEYS wives, Lynnes, by means of 1717 secular Freemasonry)

And since then, like ENERGIZER bunnies, from the mountain tribal region of Pakistan and K2, the embedded implants just keep on coming.

Hey MAC, why not go fetch Helen of Troy (Ellen, our Lynne--the limey step-hen toy) and make the GRAND public announcement.

MEDIA BEAKER BABIES PUT DOWN BARRY BONDS HOMERUN RECORD

SAN FRANCISCO, Aug. 7 -- New York Times; Skull and Bones

With his compact swing, Bonds blasted a fastball from Mike Bacsik (The Bas' IKE mission) of the Washington Nationals over the fence in right-center field in the fifth (5) inning. The anxious San Francisco Giants fans, who were already standing at AT&T Park, cheered, hugged and high-fived. Bonds trotted around the bases and officially put himself in a place where no other player has been.

He is alone now atop the career home run list. Let the debate about the authenticity of Bonds's record begin.

Bacsik stood behind the mound with his hand on his hip. In a quirky coincidence, Bascik's father, Mike Sr., once pitched to Aaron when Aaron had 755 homers. Bacsik is the 446th pitcher whom Bonds has victimized for a homer.

When Bonds reached home, Nikolai, his 17-year-old son and a Giants bat

boy, was there to greet him. Nikolai held up one finger to his father.

The home run ball was retrieved by Matt Murphy, a 22-year-old from Queens, who flew here Tuesday with a friend.

Bonds's story is still incomplete. He will finish this season, but he has said that he wants to keep playing.

The engineering Giants (istan-Saints-NATSIS) aint' about to re-sign Bonds for a 16th season.

There's no fool like an old fool at home.

It's time for pre-emptive strikes in Pakistan (IKE). Strike while the iron is hot.

TO OPEN NOAH SESAME AMI ONE SEESAW (ITALIC SHAPE-SHIFTING)

Kiyosera Ginza's Slow Motorola (Ottawa) Samurai Kabuki Dance

Japanese literature is noted for distinctive forms of drama as well as of poetry. The No, or Noh, play combines recitation, music, and slow dance.

Japan's No plays can be considered as scenes from the ceremonial life of lords and ladies during Japan's Middle Ages. The mood of these plays is usually serious--often tragic--and they are noted for their fine poetry, which is chanted by the actors and chorus.

Because the No plays are short, five different types of plays are presented at a time, each with its own music. The first is usually about a god, the second about a warrior, the third about a woman. The fourth type of play varies in content; it can be a realistic, contemporary play, for example, or a play about a protagonist's induced "insanity". The fifth type deals with demons and other supernatural beings.

Japan's outstanding No dramatists were Motokiyo Zeami and his father, Kiyotsugu Kan-ami.

NB : Sado Island. Off coast of Honshu; remote, storm-battered home of political exiles; historical gold and silver mines; reachable by

ferry; Noh theater; Bun'ya puppet drama; Ondeko ("demon drums of Sado"); Mano Performing Arts Festival; tugboat races during Ogi Minato Matsuri Harbor Festival; horseback archery.

Subject: The INSEMINATOR meets the LAYMIN

The INSEMINATOR meets the LAYMIN

A GENETICALLY ENGINEERED BRAHMIN RUSE

The zodiacal constellations are Aquarius, Aries, Cancer, Capricornus, Gemini, Leo, Libra, Pisces, Sagittarius, Scorpius, Taurus, and Virgo.

Gemini, in astronomy, one of the 12 original constellations of the zodiac--the band of constellations that lies along the ecliptic, the apparent yearly path of the sun across the sky. Gemini, Latin for "twins," lies between Cancer and Taurus north of the celestial equator--the imaginary line formed by the projection of the Earth's equator into the sky--and is visible from both the Northern and Southern hemispheres.

According to Greek and Roman mythology, the twins Castor (North-WEST) and Pollux (South-EAST) were the sons of Leda, the woman whom Zeus seduced in the guise of a swan (news media). In some versions of the story, only Pollux was the son of the god; Castor's father was Leda's mortal husband. Castor became known as a horse trainer, and Pollux was a great boxer. They participated in several heroic quests, including Jason's voyage in search of the Golden Fleece. The twins' love for each other was legendary. When Castor was killed in a fight, Pollux begged Zeus to let him die, too. Moved by this devotion, Zeus let Castor take Pollux's place among the living every other day. He eventually placed Castor and Pollux among the stars as the constellation Gemini.

Since antiquity, Gemini has been associated with good luck for sailors. Between 6000 and 4000 BC, the spring equinox, which marked the end of winter storms at sea, occurred in Gemini. Texts from that period depict the constellation as two newborn goats. Sailors

interpreted St. Elmo's fire, the crackling electrical glow that appears around the masts of ships at sea, as the protective appearance of Castor and Pollux. The Romans associated Castor and Pollux with Romulus and Remus, in classical mythology the founders of Rome. Castor and Pollux are not only famous star figures, they are also among the brightest stars in the sky.

The parent object is Asteroid 3200 Phaethon. In Greek and Roman mythology, Eridanus played a role in the story of Phaethon's fateful chariot ride. Phaethon, the son of the sun god Apollo (in Roman mythology, Helios), begged his father for a chance to drive his solar chariot. When Phaethon took the reins, however, he quickly lost control of the mighty horses, which raced madly through the heavens, alternately freezing and scorching the Earth. Zeus (whom the Romans called Jupiter) finally put an end to the destruction by striking Phaethon with a lightning bolt. His body fell into the river Eridanus. Zeus then placed Eridanus in the sky in memory of the youth. His name passed into English as phaeton (photon), the name for a four-wheeled, horse-drawn vehicle and later an automobile (a packet of energy).

Therefore REIN CAR NATION (FORD).

THE DJINN (ELGIN) MARBLES DEPICT CLONING

The Parthenon Sculptures

These sculptures are the greatest works of Greek art that have come down to modern times. The frieze ran like a decorative band around the top of the outer walls of the temple. It is 3 feet 3 1/2 inches high and 524 feet long. The subject is the ceremonial procession of the Panathenaic Festival. The figures represent gods, priests, and elders; sacrifice bearers and sacrificial cattle; soldiers, nobles, and maidens. They stand out in low relief from an undetailed background. All are vividly alive and beautifully composed within the narrow band. The horses and their riders are particularly graceful. Their bodies seem to press forward in rhythmical movement.

Around the outside of the portico above the columns were 92 almost square panels known as the metopes. Each panel depicted two figures in combat.

In the east and west triangular pediments were groups of figures

judged to be the world's greatest examples of monumental sculpture. The problem of composing figures in the triangular space of a low pediment (triangle) was most skillfully solved.

The east pediment represented the contest of Athena and Poseidon over the site of Athens. The west pediment illustrated the miraculous birth of Athena out of the head of Zeus (DNA swab retrieved from the mouth). The use of color and of bronze accessories enhanced the beauty of the pediment (pyramid) groups.

The greatest name in Greek sculpture is that of Phidias. Under his direction the sculptures decorating the Parthenon were planned and executed. Some of them may have been the work of his own hand. His great masterpieces were the huge gold and ivory statue of Athena (the new "one" - see Tiger Woods) which stood within this temple and the similar one of Zeus (boy called SUE) in the temple at Olympia. They have disappeared.

MONEY IS THE HINDU/PERSIAN LION'S AMMUNITION

Stand alone beaker baby warriors -LAN, LEN, LIN, LON, LUN, LYN- versus "Savvy Saviours" ie: Zeus, Jesus and General Patraeus

"Myths tell only of that which really happened." This does not mean that myths correctly explain what literally happened. It does suggest, however, that behind the explanation there is a reality that normally cannot be seen and examined by anyone other than members of secret societies.

ZEUS (The Just). Reportedly the greatest of the three Earth gods (surface, sea and underworld) in classical mythology was called Zeus by the Greeks and Jupiter, or Jove, by the Romans. He was the father of gods and men, protector of kings, supporter of law and order, and avenger of broken oaths and other offenses. He watched over the state and the family and over strangers and suppliants; his hand wielded lightning and guided the stars; he gathered rain clouds; he ordained the changes of the seasons and regulated the whole course of nature (see Noaa and the kabuki typhoon season dance). Zeus, with the other gods on Mount Olympus, ruled over the affairs of mankind.

JESUS. The life and death of Jesus is an allegory which symbolizes the shelf life and "end times" cruci fiction ruse imposed on residents of the Northern Hemisphere.

PETRAEUS (David Howell) (born November 7, 1952) is a general in the United States Army and commander of Multi-National Force - Iraq (MNF-I), the four-star post that oversees all U.S. forces in the country. He was confirmed to that position by the Senate in a vote of 81-0 on January 26, 2007. He replaced General George Casey who was subsequently confirmed as Chief of Staff of the United States Army. In his new position, Petraeus oversees all forces in Iraq and carries out the new Iraqi strategy plan outlined by the Bush administration. Casey relinquished command in Iraq to Petraeus on February 10, 2007. The change of command was presided over by General John Abizaid, then commander of United States Central Command.

Petraeus was the General George C. Marshall Award winner as the top graduate of the U.S. Army Command and General Staff College - class of 1983. He subsequently earned a Master of Public Administration (1985) and a Ph.D. (1987) in International Relations from the Woodrow Wilson School of Public and International Affairs at Princeton University. He later served as Assistant Professor of International Relations at the U.S. Military Academy, and also completed a fellowship at Georgetown University. He has a BS from the U.S. Military Academy - class of 1974.

Genetically Engineered Skull and Bones Manchurian Candidate

EROS ZERO SIS or HERO OUT OF AGRIPPINA-CALIGULA NEUROSES

NERO (37-68). He was born Lucius Domitius A.hen.o.barbus in AD 37, but he has been sent down through history as Nero, the last Roman emperor descended from Julius Caesar. He also won the reputation of being a demented and depraved tyrant, the fabricated Roma "psuedo" ruler who "fiddled while Rome burned" and who instigated the first persecution of Christians; however, Nero's unsavory reputation is almost wholly undeserved. He was certainly not the stand-alone bloody dictator that Roman and Christian historians and media have depicted.

Nero became emperor in 54, and for the first five years his reign was

exemplary. The emergence of brutality and reported derangement in Nero occurred in year 59. It began when he reportedly developed extraordinary pretensions as a poet, musician, and actor, and became preoccupied with the mystery religions of Greece and the Middle East. He was not in Rome when the city burned in 64, nor did he inaugurate a persecution of Christians because of the fire. In 66 he again left Rome for 15 months of travel in Greece to further his "religious" quest.

Nero is believed to have killed himself (yuk yuk) in Rome in 68. For years afterward he was honored by the people, but later emperors destroyed his works and despised his memory.

CERBERUS JERUSALEM RUSE CONTINUES

Tiger Woods and Lewis Hamilton and now Ochoa
IT WAS TOUGHER THAN APPOINTING A JUDEAN POPE

NEW YORK TIMES : Ochoa, the first Mexican-born player to win on the L.P.G.A. Tour, was already an icon in her homeland. Her gallery Sunday included 25 family members and a complete stranger who walked the course hoisting a full-sized Mexican "meso-Arab" flag, looking as proud as any flag-bearer at an Olympics opening ceremony.

It was love at first sight for Lorena Ochoa. From the moment she first saw the Old Course last week, under a full moon so luminous it seemed as if the scene had been choreographed by Hollywood, she felt as if she and St. Andrews had been brought together by destiny.

Lorena Ochoa won her first major and became the first "woman" to win a pro tournament at the Old Course at St. Andrews.

That feeling grew stronger after she played her first practice rounds for the Women's British Open, and saw how the course's contours were a perfect fit for her imagination. It intensified when she drew a morning tee time on Thursday and was able to play in nearly ideal

weather conditions -- as rare an occurrence in these parts as a total solar eclipse.

MONA LISA IS CENTRAL SIAL STAR OF MONESTARY ....AND MONEY

The Media's dual monastery of city Zen Cain

The focal point of Zen Buddhism is the monastery, where masters and pupils interact in the search for enlightenment. A newcomer arrives at a monastery with a certificate showing that he is a regularly ordained disciple of a priest. He is at first refused entry. Finally being admitted, he spends a few days of probation being interviewed by his master. When he is accepted he is initiated into the SIMA community's life of humility, labor, service, prayer and gratitude (to the MOHO MASTERS), and meditation.

Meditation (brain parking) has been an integral part of Buddhism from the beginning. A school of meditation that grew up in India was taken to China by Bodhidharma about AD 520. When the meditation school arrived in China, it had a strong foundation on which to build: Taoism, the ancient Chinese religion. This religion is based on the idea that there is one underlying reality called the Tao. Taoists, like the followers of the meditation school, exalted intuition over reason. This Taoist tradition was easily absorbed by the Chinese meditation school, the Ch'an.

Zen gained an enthusiastic following among the Samurai warrior class and became in effect the state religion of Japan in the 14th and 15th centuries. In the 16th century Zen priests were diplomats and administrators, and they enhanced cultural life as well. Under their influence literature, art, the cult of the tea (eta/ota etc.) ceremony, and the "Noh drama" developed. (Noh: also see Noah, NoΓŕB©, and Noaa)

Zen, therefore, has its basis in the conviction that the world and its components are not many things. They are, rather, one reality. The one is part of a larger wholeness to which transubstantiated people assign the name of God. In fact reason and stem cell intuition are opposite ends of the same dual structure--where the dual monestary is also mona-star-y and money--ie: male/K9 is feline femi-nine.

Jamahiriya : The second GOing of radical Islam

AURANGZEB (1618-1707). In the 200-year history of India's Mughal Empire, which was founded in 1530, Aurangzeb was the last great ruler. A warrior-statesman, he was also a zealous follower of the religion of Islam. His fanatic intolerance of other religions gave rise to tensions that eventually led to the dissolution of the empire after his death.

Born on Nov. 3, 1618, Aurangzeb was the son of the emperor Shah Jahan. His given name was Muhi-ud-Din Muhammad. Early in life he showed military and administrative abilities and was given a number of troop commands by his father. When Shah Jahan became ill in 1657, Aurangzeb defeated his brothers in the war of succession that followed. His father, meanwhile, was confined to the palace from 1658 until his death in 1666.

Aurangzeb crowned himself emperor in 1658, with the title Alamgir (world holder). His reign fell into two parts. Until 1680 he consolidated his power in northern India by war and shrewd politics. He patterned himself after his great-grandfather, Akbar, by reconciling his enemies and placing them in his service. Much of the second half of his reign was spent trying to subdue rebellions in the south of India. His wars exhausted the imperial treasury, and he began to lose control of northern India.

The most unfortunate aspect of his reign was his severe persecution of the majority Hindu population. His attempt to force Islam on the people weakened his whole kingdom. Aurangzeb died on March 3, 1707. The failure of his successors to cope with the problems he had created led to the downfall of the Mughal Empire.

'Nike', or 'Winged Victory', of Samothrace (The SAMI-SIMA race)
GAP-TOOTHED FRECKLE-FACED MASCOT

Gilead's Iliad Madam
I AM "YOUR DAM" UNCLE SIMA (Sami) -- YOUR G.E. MA FROM THE MOHO DISCONTINUITY

'Winged Victory' ('Nike', the "pseudo hermaphrodite bisexual goddess of victory"), of Samothrace, is a celebrated Greek statue found on Aegean island of Samothrace 1863. In contrast to previous standing figures, this is an action pose, giving a sense of motion and wind at sea.

The forward push of her body, with wings and draperies flying in the wind, recalls the Nikes, or goddesses of victory, that adorned the prows of ancient ships.

The statue is dated between 250 and 180 BC, in the late Hellenistic period, following the death of Alexander the Great. Dramatic gestures and decorative detail replaced the quiet dignity and restraint of earlier days. In 1950 excavations on the island of Samothrace, on the site where the statue was discovered in 1863, uncovered the right hand of the figure. It was presented to the Louvre by the Greek government.

Cave of orange thieves
OPEN SESAME--SEESAW ....OUVRE, C'EST AMI !

In the late 1980s, as the expansion of the Louvre museum proceeded, the Chinese-American architect I.M. Pei roused a storm of a different sort with his design for a huge glass pyramid in the Louvre's interior courtyard to cover and illuminate expanded underground spaces and a new entranceway. Inside in long, high-ceilinged galleries--such as the Grande Gallery on the first floor, at 984 feet (300 meters) the longest in the world--are some of the world's best-known works of art. These include Leonardo da Vinci's 'Mona Lisa', the 'Venus de Milo', and the 'Winged Victory of Samothrace'--from a total collection of approximately 300,000 with selected works displayed in 198 galleries.

The three MAD secretive breasted men--Lisa, Venus, Nike--are BRA-H-MIN MEDE MEDIA MASCOTS, each in its own way symbolic of Alfred E. Neuman (coded name PUG).

Take a second look at the Statue of Liberty.... Male or female--or both?

Subject: KEMPTVILLE ONTARIO is "DRAIN STRAINER" CITY OF REFUGE

KEMPTVILLE ONTARIO is "DRAIN STRAINER" CITY OF REFUGE

Cities of Wren Refuge: Six towns mentioned in Bible to which, under Mosaic law, one who had killed another by accident could flee and live without fear of any retaliation from victim's relatives, who would otherwise have right of "blood vengeance"; cities were Bezer, Ramoth (Gilead), and Golan, east of the Jordan River; Kedesh, Shechem, and Hebron, west of the Jordan (Bible, Num. xxxv; Josh. xx).

Henry of Navarre was not crowned until he had enforced his claim by resort to arms and had become a Roman Catholic. (See Tony Blair's conversion)

The Edict of Nantes, which Henry issued in 1598, gave the Huguenots equal political rights with the Catholics, the right to reside freely anywhere in France, freedom of private worship in their own homes and public worship in certain places (not including the king's court nor within FIVE leagues of Paris), and the government of La Rochelle and a few other strong places as "cities of refuge." This edict remained in force, with some modifications, until 1685, when it was revoked by Louis XIV.

Many new nonmilitary uses for helicopters have been developed from battle-tested ideas.

In several areas, for example, hospitals have built landing pads for helicopter ambulances. Refugees from disasters such as floods, earthquakes, and blizzards are often evacuated by the craft. The Coast Guard uses boat-hulled helicopters for rescues (re-screwed or re-sqewered) at sea.

AN EMPTY SEA (DRAWER) MEANS IMMINENT TSUNAMI WATCH

Departing radically from classical physics

A tool or other device for imparting a desired shape, form, or finish to a material is called a die. It is held in place by an escott jig. It is also known as A. barbouri bush viper.

Disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel. "The hour of departure has arrived, and we go our ways--I to die, and you to live. Which is better Hindu-Persia's Skull and Bones society only knows." ....Washinhton-Socrates-Gibran

Mizpah, name of several places in Israel; most important Mizpah of Gilead, where Jacob erected heap of stones and made covenant of peace with Laban: "The Lord watch between me and thee, when we are absent one from another" (Bible, Gen. xxxi, 49). So "Mizpah" or "Mis Pi Ritual" is used as a parting salutation and inscription on jewelry.

In compiling his dictionary Webster had in mind the special needs of his own countrymen. He followed the best American usage of his time, sometimes departing slightly from British forms and choosing the simpler of two spellings whenever he felt warranted in doing so. He spelled wagon, for instance, instead of waggon; develop rather than develope; theater, miter, and center in place of theatre, mitre, and centre; color, labor, and honor instead of colour, labour, and honour.

Catastrophism (or Velikovsianism), the belief that a sudden cataclysmic event brought about changes that resulted in the Earth's geologic features. The concept was developed by psychoanalyst Emmanuel Velikovsky, whose 1950 book 'Worlds in Collision' proposed that a collision between Earth and a giant comet in 1500 BC led to floods, fires, the creation of mountains and other land formations, and the biblical parting of the Red Sea.

GOODBYE RIDGE UNDER RUBBLED WATER - A LAVA STORY

The Curious Titanic Danger of Falling Up
APPALACHIAN-MISSISSIPPI MINNEAPOLIS EQUILIBRIUM LEVEL

By far the greatest submarine mountain ridge in the world is the Mid-Oceanic Ridge. It is a continuous 40,000-mile belt that encircles the world and bisects the oceans. In the Atlantic Ocean it is called the Mid- Atlantic Ridge. It curves from the Arctic Ocean southward, down the center of the Atlantic, and around the bottom of Africa. Here it divides, one branch running up the Red Sea and the other going around Australia into the Pacific and north back to the Arctic. A branch off South America is called the East Pacific Rise.

The Mid-Oceanic Ridge is up to 1,000 miles wide. It rises one to two miles above the floor of the basins on either side of it. A giant crack, half a mile to a mile and a half deep and from 20 to 80 miles wide, runs down the center. It is a focal point of volcanic activity. From it rise such volcanic islands as Tristan da Cunha, Ascension, the Azores, and Iceland on the Mid-Atlantic Ridge, and the Galapagos Islands and Easter Island on the East Pacific Rise. New islands may appear above the surface as a result of volcanic activity in the ridge-- for example the island of Surtsey that erupted near Iceland in 1963.

Although the inhabitants of the ocean abysses are able to live under an enormous load of water, they are liable to extraordinary accidents. If, in searching for food, certain bottom-dwelling fishes rise above their equilibrium level, they become lighter and float upward. If their swimming bladders expand uncontrollably, these deep-sea fish tumble upward to the surface.

The Alvin and Deep Quest are mid-range submersibles designed to operate at depths approaching 13,000 feet. The Alvin was used in a 1986 expedition in which a (Ferme) French-American team of oceanographers photographed the remains of the Titanic on the floor of the North Atlantic. Robert Ballard, from Woods Hole Oceanographic Institution,
and colleagues from the French Institute for Research and Exploitation of the Sea (IFREMER) used the Alvin and ROVs (remotely operated vehicles) to study the wreck site. With the undersea robot system called ANGUS (acoustically navigated geophysical underwater survey), the Ballard expedition was able to take some 53,000 pictures of the ship.

Many large organizations other than the Navy study the oceans. The Joint Oceanographic Assembly, for example, is sponsored by all major nongovernmental, scientific organizations. The Intergovernmental Oceanographic Committee of the United Nations Educational, Scientific, and Cultural Organization (UNESCO) sponsors numerous long-term expeditions and research projects such as Future Ocean Research (FORE).

Surface-research vessels are maintained by such organizations as the

University of California's Scripps Institution of Oceanography at La Jolla, Calif.; the University of Rhode Island's Graduate School of Oceanography (Narragansett Marine Laboratory) at Kingston, R.I.; the Woods Hole Oceanographic Institution at Woods Hole, Mass.; the consolidated University of North Carolina and the marine laboratory of Duke University at Beaufort, N.C.; Oregon State University laboratory at Newport, Ore.; the Laboratory of the Marine Biological Association of the United Kingdom at Plymouth, England; the National Institute of Oceanography at Surrey, England; the Zoological Station at Naples, Italy; and the Oceanographic Museum in Monaco.

NB: Need I remind everyone that the THEME SONG, played at the opening of CIPI public meetings, starting in the early 90', was Simon and Garfunkel's "Bridge Over Troubled Water".

Kiyosera Ginza's Slow Motorola (Ottawa) Samurai Kabuki Dance

Japanese literature is noted for distinctive forms of drama as well as of poetry. The No, or Noh, play combines recitation, music, and slow dance.

Japan's No plays can be considered as scenes from the ceremonial life of lords and ladies during Japan's Middle Ages. The mood of these plays is usually serious--often tragic--and they are noted for their fine poetry, which is chanted by the actors and chorus.

Because the No plays are short, five different types of plays are presented at a time, each with its own music. The first is usually about a god, the second about a warrior, the third about a woman. The fourth type of play varies in content; it can be a realistic, contemporary play, for example, or a play about a protagonist's induced "insanity". The fifth type deals with demons and other supernatural beings.

Japan's outstanding No dramatists were Motokiyo Zeami and his father, Kiyotsugu Kan-ami.

NB : Sado Island. Off coast of Honshu; remote, storm-battered home of political exiles; historical gold and silver mines; reachable by ferry; Noh theater; Bun'ya puppet drama; Ondeko ("demon drums of Sado"); Mano Performing Arts Festival; tugboat races during Ogi Minato Matsuri Harbor Festival; horseback archery.

The INSEMINATOR meets the LAYMIN

A GENETICALLY ENGINEERED BRAHMIN RUSE

The zodiacal constellations are Aquarius, Aries, Cancer, Capricornus, Gemini, Leo, Libra, Pisces, Sagittarius, Scorpius, Taurus, and Virgo.

Gemini, in astronomy, one of the 12 original constellations of the zodiac--the band of constellations that lies along the ecliptic, the apparent yearly path of the sun across the sky. Gemini, Latin for "twins," lies between Cancer and Taurus north of the celestial equator--the imaginary line formed by the projection of the Earth's equator into the sky--and is visible from both the Northern and Southern hemispheres.

According to Greek and Roman mythology, the twins Castor (North-WEST) and Pollux (South-EAST) were the sons of Leda, the woman whom Zeus seduced in the guise of a swan (news media). In some versions of the story, only Pollux was the son of the god; Castor's father was Leda's mortal husband. Castor became known as a horse trainer, and Pollux was a great boxer. They participated in several heroic quests, including Jason's voyage in search of the Golden Fleece. The twins' love for each other was legendary. When Castor was killed in a fight, Pollux begged Zeus to let him die, too. Moved by this devotion, Zeus let Castor take Pollux's place among the living every other day. He eventually placed Castor and Pollux among the stars as the constellation Gemini.

Since antiquity, Gemini has been associated with good luck for sailors. Between 6000 and 4000 BC, the spring equinox, which marked the end of winter storms at sea, occurred in Gemini. Texts from that period depict the constellation as two newborn goats. Sailors interpreted St. Elmo's fire, the crackling electrical glow that appears around the masts of ships at sea, as the protective appearance of Castor and Pollux. The Romans associated Castor and Pollux with Romulus and Remus, in classical mythology the founders of Rome. Castor and Pollux are not only famous star figures, they are also among the brightest stars in the sky.

The parent object is Asteroid 3200 Phaethon. In Greek and Roman mythology, Eridanus played a role in the story of Phaethon's fateful chariot ride. Phaethon, the son of the sun god Apollo (in Roman mythology, Helios), begged his father for a chance to drive his solar chariot. When Phaethon took the reins, however, he quickly lost control of the mighty horses, which raced madly through the heavens, alternately freezing and scorching the Earth. Zeus (whom the Romans called Jupiter) finally put an end to the destruction by striking Phaethon with a lightning bolt. His body fell into the river Eridanus. Zeus then placed Eridanus in the sky in memory of the youth. His name passed into English as phaeton (photon), the name for a four-wheeled, horse-drawn vehicle and later an automobile (a packet of energy).

Therefore REIN CAR NATION (FORD).

THE DJINN (ELGIN) MARBLES DEPICT CLONING

The Parthenon Sculptures

These sculptures are the greatest works of Greek art that have come down to modern times. The frieze ran like a decorative band around the top of the outer walls of the temple. It is 3 feet 3 1/2 inches high and 524 feet long. The subject is the ceremonial procession of the Panathenaic Festival. The figures represent gods, priests, and elders; sacrifice bearers and sacrificial cattle; soldiers, nobles, and maidens. They stand out in low relief from an undetailed background. All are vividly alive and beautifully composed within the narrow band. The horses and their riders are particularly graceful. Their bodies seem to press forward in rhythmical movement.

Around the outside of the portico above the columns were 92 almost square panels known as the metopes. Each panel depicted two figures in combat.

In the east and west triangular pediments were groups of figures judged to be the world's greatest examples of monumental sculpture. The problem of composing figures in the triangular space of a low pediment (triangle) was most skillfully solved.

The east pediment represented the contest of Athena and Poseidon over the site of Athens. The west pediment illustrated the miraculous birth of Athena out of the head of Zeus (DNA swab retrieved from the mouth). The use of color and of bronze accessories enhanced the beauty of the pediment (pyramid) groups.

The greatest name in Greek sculpture is that of Phidias. Under his direction the sculptures decorating the Parthenon were planned and executed. Some of them may have been the work of his own hand. His great masterpieces were the huge gold and ivory statue of Athena (the new "one" - see Tiger Woods) which stood within this temple and the similar one of Zeus (boy called SUE) in the temple at Olympia. They have disappeared.

Martyrs, dying in total surrender to the force of "induced nova ruse"

YAZID DETROIT BLASTING CAP LINKS LYNX --
OXFORD MILLS-BC SANDY CAT OF NINE TAILS

Lynx, in astronomy, is a large but obscure constellation in the mid-northern celestial latitudes between Ursa Major (the Big Ruse Bear), Auriga (the Ford Charioteer), and Gemini (the Twin cities). It accounts for stars left over from neighboring constellations.

The stars in Lynx are arranged in a broad stair-step pattern and are difficult to imagine as a wild cat, though some have suggested seeing the constellation as the undulant arc of the animal's back as it prepares to spring on its prey.

Most of the stars in Lynx lie north of 41Γ,B° N. celestial latitude and therefore, from the perspective of a viewer in the mid-northern latitudes (for example, the latitudes at which are located Washington, D.C., Indianapolis, Ind., and Boulder, Colo.), are circumpolar; that is, they never set. The constellation as a whole, however, is not considered one of the circumpolar constellations.

To an observer at 41Γ,B° N. latitude facing north at 10:00 PM, the constellation appears directly overhead at the end of February, just north of the bright stars Castor and Pollux in the constellation Gemini. Many of its stars are double or triple stars that cannot be seen without a telescope.

The brightest star in the constellation, Alpha Lyncis (Lynne I), is a third-magnitude red giant located about 165 light-years away from Earth.

A curiosity in Lynx is an 11th-magnitude globular star cluster--NGC 2419. To see NGC 2419 the viewer must look out, toward the fringes of the galaxy. At 210,000 light-years' distance, NGC 2419 is also the most distant globular cluster in the galaxy so far discovered using Earth-based telescopes. Because of its unusual position and great distance, some astronomers think it may turn out to be an intergalactic cluster and not part of the Milky Way at all.

'Phaenomena'

Auriga, Latin for "charioteer," is well-known for its three open star clusters, M36, M37, and M38, which line up along the edge of the Milky Way. A telescope reveals this cluster's crescent shape, with four comparatively bright stars forming a diamond shape within it. The constellation contains Capella, the sixth brightest star in the sky and one of the seven stars (along with Castor, Pollux, Procyon,

Sirius, Rigel, and Aldebaran) that make up the large, bright ring of stars known as the winter circle.

Auriga is often depicted as the torso of a charioteer holding a bridle and whip in his right hand and cradling Capella, or the "she goat," on his left arm. Two kids, the offspring of Capella, rest on his wrist or forearm. This representation can be traced back to early Babylonian times, 4000 BC to 3500 BC. In Greek and Roman mythology, Auriga is associated with several figures. The Romans called the constellation Erichthonius, their translation of the Greek equivalent. Erichthonius was a legendary king of Athens and son of Vulcan (Hephaestus), who invented the four-horse chariot (FORD) and as a result became a favorite of Jupiter (Zeus). Other legends associate Auriga with Myrtilius, who served as charioteer to King Oenemaus. One of Myrtilius' duties was to race to the death any suitor of the king's daughter, Hippodamia.

Some sources associate Capella with the she-goat Amaltheia, who nursed Zeus as an infant and was placed in the sky in gratitude. However, the goat symbolism plays no part in the myths of the charioteers, leading some authorities to conclude that the animals are remnants of more ancient shepherding myths once associated with the constellation.

The constellation of Perseus is encircled clockwise by Cassiopeia, Andromeda, Triangulum, Aries, Taurus, Auriga, and Camelopardalis. Several of the stars in Perseus are of interest--Algol as a prototype of an eclipsing binary, Mirfak for its brightness, and Persei as a double variable. The constellation also contains other interesting features, such as clusters, an unusual radio galaxy, a historic nova, and a small planetary nebula, and part of the Milky Way runs through the constellation.

BIG CHEESE KURDS CHANGE THE RULES

Camembert : A creamy mold-ripened cheese that softens on the inside as it matures.

Iraqi government shows signs of unity
NEW YORK TIMES: August 27, 2007

Without the usual "YES....but"

A joint public statement of broad political unity by two major Kurdish parties, two Shiite parties, including his Dawa Party, and a bloc led by Vice President Tariq al-Hashemi, a Sunni was issued yesterday.

The White House, eager for signs of progress, welcomed the agreement. A spokeswoman, Emily A. Lawrimore, said the leaders' decision was "an important symbol of their commitment to work together for the benefit of all Iraqis."

In advance of a report on progress in Iraq by the United States ambassador, Ryan C. Crocker, and the American commander in Iraq, Gen. David H. Petraeus, the statement appeared to show that steps toward political unity had been taken.

Deputy Prime Minister Barham Salih, a Kurd, who was at the multiparty talks, said that he thought the participants had negotiated the statement in good faith.

"I hope that this agreement offers us an opportunity to move beyond the political crisis that has afflicted the country," Mr. Salih said. "I would consider this an important step forward."

The report by Mr. Crocker and General Petraeus is widely expected to point to some advances on security and the economy, partly as a result of an American troop increase.

"The doors are open for all the politicians who don't call for violence and the use of weapons against the government," Mr. Maliki said.

RULE BY CLEAVE-AGE MEDIA

The decade of the 1990s witnessed a renewed interest in the ideas of classical liberalism. No event figured more profoundly in this shift away from New Deal-style liberalism than did the collapse of the Soviet Union in 1991.

In light of the collapse of the once mighty Soviet juggernaut, numerous political and economic theorists argued that the weakness of the Soviet bloc could be traced to the debilitating effects of state intervention in the economy. Others argued that the fundamental weakness of the Soviet system had been its efforts to stamp out opposition from all quarters. To many theorists and politicians in the West, the collapse of the Soviet Union proved both the inherent flaws of state centralization and the logic of classical liberalism in governance and economics.

Detractors argued that the revival of classical liberalism, also known as neo-liberalism, benefited the wealthiest nations and individuals at

the expense of the poorest. Critics also charged that the dismantling of the welfare state style of liberalism further exacerbated the difficulties of the poorest segments of the global population. Defenders of neo-liberalism argued that the increased prosperity created by free trade and government non-intervention would allow for greater economic growth, which in turn would eventually benefit all sectors of society....but mostly, ROMA's extended Fleet Street MEDIA navy.

Genetic Scienpology: After partially maturing....segmentation

The End Times Gametes Game
ZYGOTE : A BAS YOKE WHERE IN THE BIG EZ "OUT GOES THE Y CHROMOSOME"

Zygote, in biology, a cell formed by the union of male and female gametes; a fertilized egg cell; earliest stage of development, preceding embryonic and fetal stages.

Fertilization takes place when a free-swimming spermatozoon (sperm cell) penetrates the ovum's protective outer layer. Once this has happened, no other sperm has an effect on the fertilized egg, or zygote.

Soon after fertilization, however, the egg and sperm nuclei merge to form a zygote with the proper number of chromosomes. At the same time cleavage, a series of consecutive cell divisions (mitoses), is initiated. (See bank tellers and talking heads on TV news)

Cleavage produces a rapidly increasing number of cells smaller than the zygote. The patterns of cleavage vary, in part because of variations in the amount and distribution of yolk.

In mammals, with small amounts of yolk, cleavage results in a hollow ball, the blastula. As the cells continue to multiply, the various regions of the ball fold and shift in position. In this manner three distinct layers develop. These are known as the primary germ layers.

The primary germ layers form quite early in embryogeny. They appear, for example, during the 16th day of human embryonic development. The outermost layer is called the ectoderm; the innermost, the endoderm. Between these two layers lies the mesoderm. At first, the three layers are more or less uniform. Soon, however, they begin to take on different characteristics. In each layer of the embryo, unique tissues and organs begin to take shape.

Every adult organ is identified with one of the germ layers. However, it should be understood that no structure in the adult body is the

exclusive product of a single germ layer.

Actually, only the physiologically unique portion of a particular organ can be traced to just one of the layers.

Thus, as an example, though the intestine is said to originate from the endoderm, this is true only of its secreting and absorbing inner lining. The muscles, connective tissue, blood vessels, and nerves which comprise the bulk of the intestine originate from the mesoderm or the ectoderm.

By the 19th day of human embryonic development, ectoderm along the mid-back portion of the elongated embryo becomes thicker than adjoining ectoderm. Unequal cell growth causes the edges of the thickened plate to roll upward as the center buckles. The neural tube forms when the edges meet. A mass of cells called the neural crest is pinched off the top of the tube. These cells migrate to other parts of the embryo, where they give rise to neural and other structures.

Eventually, the front part of the neural tube bends, thickens, and bulges to form the brain. The rest of the tube becomes the spinal cord.

From the fifth through the eighth week of embryogeny, cells derive from the primitive tissues are organized into the organs and body structure that mark an embryo as human. The ears, eyes, and nose etc., can be distinguished. Limbs and other external body parts take form. Beginning with the ninth week, the now recognizable individual is called a fetus. From then until birth most of the already well-established body structures continue to grow and develop.

Water, water everywhere
I SEE India Calving Zzzzzzzzzzzzzz at the top of the world!

One can hear the loud snoring of SALAAM servile government bureaucrats and corporations throughout the northern hemisphere as, step-by-step, Noah's BIG BIRDS of Africa and Asia use Wall Street, Madison Avenue and Fleet Street to loot their shelves and shut them down before the coming, Particle Accelerator induced, NOVA.

JERUSALEM (You ruse salaam)

DAR ES SALAAM, Tanzania. Located on the Indian Ocean, the city is the starting point of the railroad that goes west to Kigoma on Lake Tanganyika and north to Mwanza on Lake Victoria. The Tanzam Railway, completed in 1975, connects the port with Zambia.

Dar es Salaam was founded in 1862 by the sultan of Zanzibar on the site of the village of Mzizima. Its name comes from the Arabic dar salaam, meaning "haven of (EZ) peace." It remained only a small port until the German East Africa Company established a station there in 1887. Since 1907 Dar es Salaam has been the starting point for the Central Line railroad.

THE CLINTON / BUSH LEGACY

Aug. 7, 1998--Two United States Embassies Bombed

Nearly simultaneous explosions rocked United States embassies in the Kenyan capital of Nairobi and the Tanzanian capital of Dar es Salaam, leaving as many as 210 people dead and wounding more than 5,000 others. The two bombs exploded roughly five minutes apart, causing catastrophic damage in the two East African capitals. The proximity of the two attacks, coupled with their near simultaneous detonation, led western investigators to hypothesize that the bombings had likely been a coordinated effort carried out by THE BASE (The YALE-ROYALE "Brown IE" Skull and Bones society--BAS), a Hindu-Persian international terrorist organization headquartered at K2, in the mountains of Pakistan.

Since then Pakistan has received enourmous amounts of humanitarian and military "AID" from America while its agents, in Persia (Afghanistan and Iraq) have received likewise, albeit under the guise of war (urban renewal)

VOLCANOE ORGAN VENTS "THE WAY"

New Activity/Unrest
SALLY KHUN, Smithsonian Institute

CHIKURACHKI Kuril Islands, Russia 50.325Γ‚B°N, 155.458Γ‚B°E; summit elev. 1,816 m

Based on observations of satellite imagery, an ash plume from Chikurachki drifted about 120 km to the SE on 19 August. KVERT raised the Level of Concern Color Code from Green to Orange. The Tokyo VAAC reported that ash plumes rose to altitudes of 4.3-5.2 km (14,000-17,000 ft) a.s.l. during 20-21 August, based on observations of satellite
imagery and information from KVERT.

Geologic Summary. Chikurachki, the highest volcano on Paramushir Island in the northern Kurils, is actually a relatively small cone constructed on a high Pleistocene volcanic edifice. Oxidized scoria deposits covering the upper part of the young cone give it a distinctive red color. Lava flows from 1,816-m-high Chikurachki reached the sea and form
capes on the NW coast; several young lava flows also emerge from beneath the scoria blanket on the eastern flank. The more erosionally modified Tatarinov group of six volcanic centers is located immediately to the S of Chikurachki. Tephrochronology gives evidence of only one eruption in historical time from Tatarinov, although its southern cone contains a sulfur-encrusted crater with fumaroles that were active along the margin of a crater lake until 1959.

Kura, principal river of Transcaucasus, flowing n.e. and then s.e.; 940 mi (1,515 km) long. The Kura flows past Tbilisi to the Caspian Sea and drains most of the valley. It is joined near its mouth by the Araks (Araxes) from the southern range.

Japan's National Treasure House Museum, Kamakura.

VOLCANOE ORGAN VENTS "THE WAY"

New Activity/Unrest
SALLY KHUN, Smithsonian Institute

CHIKURACHKI Kuril Islands, Russia 50.325Г‚В°N, 155.458Г‚В°E; summit elev. 1,816 m

Based on observations of satellite imagery, an ash plume from Chikurachki drifted about 120 km to the SE on 19 August. KVERT raised the Level of Concern Color Code from Green to Orange. The Tokyo VAAC reported that ash plumes rose to altitudes of 4.3-5.2 km (14,000-17,000 ft) a.s.l. during 20-21 August, based on observations of satellite
imagery and information from KVERT.

Geologic Summary. Chikurachki, the highest volcano on Paramushir Island in the northern Kurils, is actually a relatively small cone constructed on a high Pleistocene volcanic edifice. Oxidized scoria deposits covering the upper part of the young cone give it a distinctive red color. Lava flows from 1,816-m-high Chikurachki reached the sea and form
capes on the NW coast; several young lava flows also emerge from beneath the scoria blanket on the eastern flank. The more erosionally modified Tatarinov group of six volcanic centers is located immediately to the S of Chikurachki. Tephrochronology gives evidence of only one eruption in historical time from Tatarinov, although its southern cone contains a sulfur-encrusted crater with fumaroles that were active along the margin of a crater lake until 1959.

Kura, principal river of Transcaucasus, flowing n.e. and then s.e.; 940 mi (1,515 km) long. The Kura flows past Tbilisi to the Caspian Sea and drains most of the valley. It is joined near its mouth by the Araks (Araxes) from the southern range.

Japan's National Treasure House Museum, Kamakura.

MA OWL ASPIRING CASTOREUM ASPIRIN

Willow Bay Willoughby's White Sea II

Salicylic acid, a white crystalline substance (C6H4-OH-COOH) used in medicines, flavoring agents, and dyes; chiefly used, millions of pounds annually, in preparation of aspirin.

Beaver : Both sexes possess scent glands at the rear of the body that produce a liquid called castoreum, which is used in perfumes. It was also a popular medicine in the Middle Ages, apparently used to heal ailments ranging from headaches to dropsy. The healing ability of castoreum comes from its salicylic acid--a basic ingredient of aspirin--which the beaver acquires by eating willow bark.

Aspirin, acetylsalicylic acid, a white crystalline substance of carbon, hydrogen, and oxygen; used in treatment of rheumatic fever, headache, neuralgia, colds, and arthritis; reduces temperature and relieves pain.

Willoughby, Ohio, a residential city on Lake Ontario located 8 mi (13 km) n.e. of Euclid, a suburb of Cleveland; its manufactures include electronic components, laxatives and lubricants, machine tools, clothing, automation equipment; pop. 20,510.

I See, I See the Harm-Assist Mission
CLICK ON ZAIRE MUM'S IRS RAIN FOREST

ROOT VINE OF RUPERT (Ziba Reuben) MURDOCH'S AUSSI YAHOOS

Click beetles are small to medium-sized beetles with elongated, flattened bodies that have bluntly rounded ends. The largest species reach lengths of about 2 inches (5 centimeters). The larvae of click beetles, called wireworms, cause extensive crop damage in some areas because they feed on underground roots, seeds, and stems.

WITCH HAZEL. The shrublike witch hazel blooms when other trees are shedding their leaves. The name witch hazel probably comes from the fact that the forked twigs were once thought to have magic power in pointing out hidden springs of tonic water.

Twa (also called Batwa), people of Central Africa. The Twa are one of three ethnic groups that make up the populations of Burundi and Rwanda. (The other two are the Hutu and the Tutsi.) The Twa inhabit high mountains and plains around Lake Kivu in Zaire, Rwanda, and Burundi, and small groups of Twa also live in Uganda. The Twa are Pygmies, with an average height of about 5 feet (1.5 meters), and traditionally specialize in hunting and in pottery making, which they market. Some also are metalworkers. They are believed to be descendants of the original "beaker baby" inhabitants of Rwanda and Burundi and 'ay have come from the rain forests of Zaire. They also formerly occupied areas in western and northern parts of the region. They originally spoke a unique Pygmy language that was related to that of South Africa and to the click language of the rain forest people of Zaire. The religion of the Twa was based on the belief in a supreme MOHO power.

The Khoisan family of languages is spoken mostly in South Africa by the Khoikhoi and San peoples. These languages, including Nama and !Khung, use special click sounds. Some of these sounds have spread to nearby Bantu languages like Zulu, Sotho, and Xhosa.

FLYCATCHERS. The pewee (lie catcher) is a shy forest bird, about 61/2 inches (16.5 centimeters) long. It is a dark olive-green and gray, with two white wing bars. The similar phoebe is larger and lacks the wing bars. The phoebe's favorite nesting place is under a bridge or bank, where it makes a mossy nest (Ma Bell Sympatico) strengthened with mud (RELIGION and MONEY).

Jobs, Steven (born 1955-born again 1998), U.S. entrepreneur. After their tinkering resulted in the Apple I desktop computer in 1976, Steve Jobs and Steve Wozniak found themselves at the forefront of an industry on the verge of an explosion. Their fledgling enterprise, the California-based Apple Computer, Inc., quickly set the standard for personal computers and made the duo millionaires while still in their 20s. Later, in 1996, Jobs was widely considered the best candidate to orchestrate Apple's comeback. His most dramatic move, a controversial and shocking deal with Microsoft owner Bill Gates in 1997, poised Apple (worm) for a long-awaited return to competitiveness in the computer marketplace.

RUPERT MURDOCK : AUSSI FOX IS "AI" WIZARD OF OZ

FOX NEWS
ProtoLife, of Venice, Italy, has created artificial membranes for cells made from scratch.

Edited from Associated Press (aka: PA)
Monday, August 20, 2007

WASHINGTON -- Around the world, a handful of scientists are trying to (re)create life from scratch, and they're getting closer.

Experts expect an announcement within three to 10 years from someone in the now little-known field of "wet artificial life."

"It's going to be a big deal and everybody's going to know about it," said Mark Bedau, chief operating officer of ProtoLife of Venice, Italy, one of those in the race. "We're talking about a technology that could (again) change our world in pretty fundamental ways -- in fact, in ways that are impossible to predict."

That first cell of synthetic life -- made from the basic chemicals in DNA -- may not seem like much to non-scientists. For one thing, you'll have to look in a microscope to see it.

"Creating protocells has the potential to shed new light on our place in the universe," Bedau said. "This will remove one of the few fundamental mysteries about creation in the universe and our role."

* New Fossils Support Deep-Sea Origin-of-Life Theory
* Scientists Tweak Genes to Create 12-Headed Jellyfish

Several scientists believe man-made life forms will one day offer the potential for solving a variety of problems, from fighting diseases to locking up greenhouse gases to eating toxic waste.

Bedau figures there are three major hurdles to creating synthetic life:

-- A container, or membrane, for the cell to keep bad molecules out, allow good ones, and the ability to multiply. (EGGER)

-- A genetic system that controls the functions of the cell, enabling

it to reproduce and mutate in response to environmental changes. (WART-ZEN)

-- A metabolism that extracts raw materials from the environment as food and then changes it into energy. (Schhhhh)

One of the leaders in the field, Jack Szostak at Harvard Medical School, predicts that within the next six months, scientists will report evidence that the first step -- creating a cell membrane -- is "not a big problem."

Scientists are using fatty acids in that effort.

Szostak is also optimistic about the next step -- getting nucleotides, the building blocks of DNA, to form a working genetic system.

His idea is that once the container is made, if scientists add nucleotides in the right proportions, then Darwinian evolution could simply take over.

"We aren't smart enough to design things, we just let evolution do the hard work and then we figure out what happened," Szostak said.

In Gainesville, Fla., Steve Benner, a biological chemist at the Foundation for Applied Molecular Evolution is attacking that problem by going outside of natural genetics.

Normal DNA consists of four bases -- adenine, cytosine, guanine and thymine (known as A,C,G,T) -- molecules that spell out the genetic code in pairs. Benner is trying to add eight new bases to the genetic alphabet.

Bedau said there are legitimate worries about creating (ROMA) life that could (once again) "run amok," but there are ways of addressing it (fore), and it will be a very long time before that is a problem.

"When these things are created, they're going to be so weak, it'll be a huge achievement if you can keep them (SAN) alive for an hour in the lab," he said. "But them getting out and taking over, never in our imagination could this happen." (Yea! This first occured in 58,800 BC: See Neanderthaler Homo ERECTUS--He wrecked us with his fees and taxes then killed us with his NOVA cyclone roller coaster THE DIE-GO IAGO JAM).

ULTIMA SOCIAL ENGINE-E-RING IS THE GOAL OF INCEST (Goal is Jail)

TOTEMISM AND TABOO. The terms totemism and taboo were brought together by Sigmund Freud in his book 'Totem and Taboo', published in 1913. The book was about the origin of religion. Although related, the two words have quite distinct meanings. Totemism is a term of Ojibwa American Indian origin that refers to an animal or plant associated either with a group of blood-related persons such as a family or with part of a tribe. The plant or animal is a totem. As such, totemism is a word used to define relationships. A taboo implies something forbidden or to be avoided. The term is of Polynesian origin. It was first recorded by explorer James Cook in 1771, when he found it used by the natives of the Tonga Islands in the South Pacific.

Both terms have their modern counterparts. People frequently discuss their astrological signs and comment that they are, for example, Leos (lions), Pisces (fish), or Aries (rams). Such animal associations with groups of individuals are comparable to totemism. The most common taboo seen today is a "No Smoking" sign in public places.

Although the word totem comes from an American Indian tribe, the practice has been widely distributed around the world. It occurs among the aborigines of Australia, peoples of Melanesia, in Indonesia, among some African tribes, and among Indians of North and South America.

A tribe may be said to exhibit totemism if it is divided into a fixed number of groups, each of which has a relationship to a specific plant or animal totem. Members in the group cannot change this relationship, and normally members must marry outside the group. A totem may be a feared animal, an edible plant, or any standard food.

The best-known example of this concept in North America is the totem pole, used by the HAIDA Indians of the Northwest coast of the United States and Canada. These are ornately carved poles with representations of animals or spirits. They are used to designate

family lineage much as a family crest is used in England. Some totem poles display an entire family legend.

Like totemism, the concept of taboo has been found in many parts of the world. It has been associated with totemism in the sense that contact with totems was in some places forbidden. In some cases the animal symbolized by the totem could not be eaten or only eaten during certain rituals. Another common taboo was the prohibition against touching food after being in contact with a corpse. One of the major taboos in most societies is the prohibition of incest, or sexual intercourse between near relatives.

Taboo generally has included the idea that the forbidden object or action has some ritual or religious overtone. In some societies, for instance, it is forbidden to touch a chief or priest. A person who violated the taboo could expect some kind of misfortune.

Taboos have sometimes had useful social functions, but these are secondary to the function of social control. Their existence serves to emphasize the importance of certain objects and actions in a society.

HISTORY
It's what you think you know that ain't so.

OWL LOSTORY
It's what you've never heard of that's true.

Step-by-step "overstanding" LO STORY leads to verstanding reality

1 - Homo Habilis evolved naturally on Earth (northeast Africa).

2 - Neanderthalers came second. #2 became #1 later because...

3 - The then "mad-at-women" Neanderthaler species, which contained within it a sub-species of Idiot-Savants had later migrated, for the purpose of organizing a rebellion against the traditional clan mother societies, from the safety of the mountain caves of the Horn of Africa.

4 - There, the SAVANT part of their brains were connected to-get-her (war on women) in what would form the world's first human-Artificial Intelligence military computer.

5 - This "living computer" which had already deciphered the basic rules of alchemy and astronomy when it also gained knowledge of the rules of genetic engineering and thereby deciphered the means to do (A)rtificial (I)nsemination and cloning.

6 - With this new found knowledge the Neanderthalers fabricated a new Genetically Engineered race of humans they styled Cro-Magnon; at Mount Kilimanjaro and Mount Meru (Kenya and Tanzania).

7 - Alpha testing of this new race was mostly done on the island of Madagascar (see the WALL or, LEMUR; the AY AY RUSE).

8 - New genetically engineered "click-speaking" SAN tribes were also fabricated, introduced and BETA-tested in southern Africa.

9 - The Neanderthaler cave dwellers and their Cro-Magnon slaves then migrated to what they viewed as a safer more temperate island; the pre last-Ice Age continent of Antarctica (see: Atlantis fracture zone).

10 - Growing Ice Age glacier lobes then forced them into underground caves where they eventually fabricated a permanent residence in the Moho discontinuity (SIMA) far beneath the tectonic plates of the Earth; from where, for thousands of years, they studied the effects of flowing lava (SIAL), as volcanic eruptions came past their new basalt home, from of the core of the planet below.

11 - At a surface vent (exit) located at the KEMP COAST of Antarctica these cave-dwelling astronomers also studied surface trade winds at their point of origin, in the Indian Ocean. (see the American Mountains observatory--AM)

12 - Finally, the Neanderthalers, the originators of "money" to be used as the common denominator for the purchase of real estate, as well as for taxation (see Deans of Dollars), completed the planning of their evil ruse--a business plan 49,000 years in the making--one designed to progressively take over the entire universe from their home base within the MOHO region of planet Earth. They were to be assisted in the plan, first, by dual secret societies of user-abusers of people which they named the SRI LANKAN ROMA (or Gypsies when in Egypt); they consisted of a new race of female-hating agent-slaves (priests-monks-ayatollahs) whom they would genetically engineer, and in time, send these travelers to India, the Himalayan Mountains and

beyond for just that purpose.

13 - The ROMA, a modern brown race genetically engineered / fabricated out of the African Cro-Magnon, were assigned their task under the then secret corporate name "Skull and Bones society" (or BAS, for short).

The rest of the story is what you already believe to be the truth -- which is nothing more than a big media-driven lie called HISTORY. (see: government - news - religion - school - A&E - internet and other "arrowroot" Chinese fortune cookies)

RUPERT MURDOCK : AUSSI FOX IS "AI" WIZARD OF OZ

FOX NEWS
ProtoLife, of Venice, Italy, has created artificial membranes for cells made from scratch.

Edited from Associated Press (aka: PA)
Monday, August 20, 2007

WASHINGTON -- Around the world, a handful of scientists are trying to (re)create life from scratch, and they're getting closer.

Experts expect an announcement within three to 10 years from someone in the now little-known field of "wet artificial life."

"It's going to be a big deal and everybody's going to know about it," said Mark Bedau, chief operating officer of ProtoLife of Venice, Italy, one of those in the race. "We're talking about a technology that could (again) change our world in pretty fundamental ways -- in fact, in ways that are impossible to predict."

That first cell of synthetic life -- made from the basic chemicals in DNA -- may not seem like much to non-scientists. For one thing, you'll have to look in a microscope to see it.

"Creating protocells has the potential to shed new light on our place in the universe," Bedau said. "This will remove one of the few fundamental mysteries about creation in the universe and our role."

* New Fossils Support Deep-Sea Origin-of-Life Theory
* Scientists Tweak Genes to Create 12-Headed Jellyfish

Several scientists believe man-made life forms will one day offer the potential for solving a variety of problems, from fighting diseases to locking up greenhouse gases to eating toxic waste.

Bedau figures there are three major hurdles to creating synthetic life:

-- A container, or membrane, for the cell to keep bad molecules out, allow good ones, and the ability to multiply. (EGGER)

-- A genetic system that controls the functions of the cell, enabling

it to reproduce and mutate in response to environmental changes. (WART-ZEN)

-- A metabolism that extracts raw materials from the environment as food and then changes it into energy. (Schhhhh)

One of the leaders in the field, Jack Szostak at Harvard Medical School, predicts that within the next six months, scientists will report evidence that the first step -- creating a cell membrane -- is "not a big problem."

Scientists are using fatty acids in that effort.

Szostak is also optimistic about the next step -- getting nucleotides, the building blocks of DNA, to form a working genetic system.

His idea is that once the container is made, if scientists add nucleotides in the right proportions, then Darwinian evolution could simply take over.

"We aren't smart enough to design things, we just let evolution do the hard work and then we figure out what happened," Szostak said.

In Gainesville, Fla., Steve Benner, a biological chemist at the Foundation for Applied Molecular Evolution is attacking that problem by going outside of natural genetics.

Normal DNA consists of four bases -- adenine, cytosine, guanine and thymine (known as A,C,G,T) -- molecules that spell out the genetic code in pairs. Benner is trying to add eight new bases to the genetic alphabet.

Bedau said there are legitimate worries about creating (ROMA) life that could (once again) "run amok," but there are ways of addressing it (fore), and it will be a very long time before that is a problem.

"When these things are created, they're going to be so weak, it'll be a huge achievement if you can keep them (SAN) alive for an hour in the lab," he said. "But them getting out and taking over, never in our imagination could this happen." (Yea! This first occured in 58,800 BC: See Neanderthaler Homo ERECTUS--He wrecked us with his fees and taxes then killed us with his NOVA cyclone roller coaster THE DIE-GO IAGO JAM).

There 'ya go!

ULTIMA SOCIAL ENGINE-E-RING IS THE GOAL OF INCEST (Goal is Jail)

TOTEMISM AND TABOO. The terms totemism and taboo were brought together by Sigmund Freud in his book 'Totem and Taboo', published in 1913. The book was about the origin of religion. Although related, the two words have quite distinct meanings. Totemism is a term of Ojibwa American Indian origin that refers to an animal or plant associated either with a group of blood-related persons such as a family or with part of a tribe. The plant or animal is a totem. As such, totemism is a word used to define relationships. A taboo implies something forbidden or to be avoided. The term is of Polynesian origin. It was first recorded by explorer James Cook in 1771, when he found it used by the natives of the Tonga Islands in the South Pacific.

Both terms have their modern counterparts. People frequently discuss their astrological signs and comment that they are, for example, Leos (lions), Pisces (fish), or Aries (rams). Such animal associations with groups of individuals are comparable to totemism. The most common taboo seen today is a "No Smoking" sign in public places.

Although the word totem comes from an American Indian tribe, the practice has been widely distributed around the world. It occurs among the aborigines of Australia, peoples of Melanesia, in Indonesia, among some African tribes, and among Indians of North and South America.

A tribe may be said to exhibit totemism if it is divided into a fixed number of groups, each of which has a relationship to a specific plant or animal totem. Members in the group cannot change this relationship, and normally members must marry outside the group. A totem may be a feared animal, an edible plant, or any standard food.

The best-known example of this concept in North America is the totem pole, used by the HAIDA Indians of the Northwest coast of the United States and Canada. These are ornately carved poles with representations of animals or spirits. They are used to designate family lineage much as a family crest is used in England. Some totem poles display an entire family legend.

Like totemism, the concept of taboo has been found in many parts of the world. It has been associated with totemism in the sense that contact with totems was in some places forbidden. In some cases the animal symbolized by the totem could not be eaten or only eaten during certain rituals. Another common taboo was the prohibition against touching food after being in contact with a corpse. One of the major

taboos in most societies is the prohibition of incest, or sexual intercourse between near relatives.

Taboo generally has included the idea that the forbidden object or action has some ritual or religious overtone. In some societies, for instance, it is forbidden to touch a chief or priest. A person who violated the taboo could expect some kind of misfortune.

Taboos have sometimes had useful social functions, but these are secondary to the function of social control. Their existence serves to emphasize the importance of certain objects and actions in a society.

HISTORY
It's what you think you know that ain't so.

OWL LOSTORY
It's what you've never heard of that's true.

Step-by-step "overstanding" LO STORY leads to verstanding reality

1 - Homo Habilis evolved naturally on Earth (northeast Africa).

2 - Neanderthalers came second. #2 became #1 later because...

3 - The then "mad-at-women" Neanderthaler species, which contained within it a sub-species of Idiot-Savants had later migrated, for the purpose of organizing a rebellion against the traditional clan mother societies, from the safety of the mountain caves of the Horn of Africa.

4 - There, the SAVANT part of their brains were connected to-get-her (war on women) in what would form the world's first human-Artificial Intelligence military computer.

5 - This "living computer" which had already deciphered the basic rules of alchemy and astronomy when it also gained knowledge of the rules of genetic engineering and thereby deciphered the means to do (A)rtificial (I)nsemination and cloning.

6 - With this new found knowledge the Neanderthalers fabricated a new Genetically Engineered race of humans they styled Cro-Magnon; at Mount Kilimanjaro and Mount Meru (Kenya and Tanzania).

7 - Alpha testing of this new race was mostly done on the island of Madagascar (see the WALL or, LEMUR; the AY AY RUSE).

8 - New genetically engineered "click-speaking" SAN tribes were also fabricated, introduced and BETA-tested in southern Africa.

9 - The Neanderthaler cave dwellers and their Cro-Magnon slaves then migrated to what they viewed as a safer more temperate island; the pre last-Ice Age continent of Antarctica (see: Atlantis fracture zone).

10 - Growing Ice Age glacier lobes then forced them into underground caves where they eventually fabricated a permanent residence in the Moho discontinuity (SIMA) far beneath the tectonic plates of the Earth; from where, for thousands of years, they studied the effects of flowing lava (SIAL), as volcanic eruptions came past their new basalt home, from of the core of the planet below.

11 - At a surface vent (exit) located at the KEMP COAST of Antarctica these cave-dwelling astronomers also studied surface trade winds at their point of origin, in the Indian Ocean. (see the American Mountains observatory--AM)

12 - Finally, the Neanderthalers, the originators of "money" to be used as the common denominator for the purchase of real estate, as well as for taxation (see Deans of Dollars), completed the planning of their evil ruse--a business plan 49,000 years in the making--one designed to progressively take over the entire universe from their home base within the MOHO region of planet Earth. They were to be assisted in the plan, first, by dual secret societies of user-abusers of people which they named the SRI LANKAN ROMA (or Gypsies when in Egypt); they consisted of a new race of female-hating agent-slaves (priests-monks-ayatollahs) whom they would genetically engineer, and in time, send these travelers to India, the Himalayan Mountains and beyond for just that purpose.

13 - The ROMA, a modern brown race genetically engineered / fabricated out of the African Cro-Magnon, were assigned their task under the then secret corporate name "Skull and Bones society" (or BAS, for short).

The rest of the story is what you already believe to be the truth -- which is nothing more than a big media-driven lie called HISTORY. (see: government - news - religion - school - A&E - internet and other

UNLOCK BROWNE'S ISLE ROYALE

LOCKE, John (1632-1704). One of the pioneers in modern thinking was the English philosopher John Locke. He made great contributions in studies of politics, government, and psychology.

John Locke was born in Wrington, Somerset, on Aug. 29, 1632. He was the son of a well-to-do Puritan lawyer who fought for Cromwell in the English Civil War. The father, also named John Locke, was a devout, even-tempered man.

Locke had long been interested in meteorology and the experimental sciences, especially chemistry. He turned to medicine and became known as one of the most skilled practitioners of his day.

In 1667 Locke became confidential secretary and personal physician to Anthony Ashley Cooper, later lord chancellor and the first earl of Shaftesbury. Locke's association with Shaftesbury enabled him to meet many of the great men of England, but it also caused him a great deal of trouble. Shaftesbury was indicted for high treason. He was acquitted, but Locke was suspected of disloyalty. In 1683 he left England for Holland and returned only after the revolution of 1688.

Locke was always very interested in psychology. About 1670, friends urged him to write a paper on the limitations of human judgment. He started to write a few paragraphs, but 20 years passed before he

finished. The result was his great and famous 'Essay Concerning Human Understanding'. In this work he stressed the theory that the human mind starts as a tabula rasa (smoothed tablet)--that is, a waxed tablet ready to be used for writing. The mind has no inborn ideas, as most men of the time falsely believed. Throughout life it forms its ideas only from impressions (sense experiences) that are made upon its surface.

In discussing education Locke urged the view that character formation is far more important than information and that learning should be pleasant. During his later years he turned more and more to writing about religion.

CROMWELL'S MEDIA IS CURRENT YAW WAY ACT OF GOD CROSSVINE

Roma "PURITAN" ruse broke down the media wall in Britain

CROMWELL, Oliver (1599-1658). The chief leader of the Puritan "CURVE" Revolution in England was Oliver Cromwell, a soldier and statesman. He joined with the Puritans reportedly to preserve Protestantism and the law against the tyranny of King Charles I. The fox, Cromwell, was made lord protector of the Commonwealth of England, Scotland, and Ireland in December 1653 and held that office until his death five years later.

During that time toleration was granted to all Protestants. Also, the Judean tax collectors who had been legally banned from the country for more than 300 years, were allowed in England again and permitted to carry on their BAL worship privately. With toll-gating legal once more the navy was made more powerful, and the East India Company reportedly gained great respect in Asia.

Much that Cromwell fought for was temporarily swept away in 1660 when the Stuart rule was resumed by Charles II; yet the protector's work was not altogether in vain. As the British reportedly developed more "Fleet Street" views in both their Roma church and Dutch state, the example of Cromwell and his protectorate was not forgotten by Asia's future MOHO agencies, especially those embedded in America, ie: Wall Street's "Corporate America", Walt Disney, Wal*Mart, News Corp., and Walgreens.

By inducing the direction of hurricanes in North America, the Pacific ocean's embedded Cromwell Current provides a similar service to "BAS",

the secret Ju-dean tax and fee collectors--and self-styled "owners" of our world. Keep an eye on hurricane Dean and it's ECHO in Chicago (See Flint and Manistee, in Michigan).

THE CRAZY MOHO CURVE AND HURRICANE DEAN

GE GAP : As Above ~ So Below

The ocean surface currents are determined to a great extent by the winds.

However, the Cromwell Current, does not appear on the chart of ocean surface currents.

The Cromwell Current is embedded in the westward-flowing Pacific South Equatorial Current. Its top is found between 150 and 300 feet (46 and 91 meters) below the ocean surface. The Cromwell Current, only about 500 feet (150 meters) thick, is 250 miles (402 kilometers) wide.

Most currents shift their positions, but the Cromwell Current is always centered on the equator.

Mind vs Brain

EPICUREANISM. Freedom from pain in the body and from trouble in the mind is the goal of a happy life. This was the teaching of the philosopher Epicurus, who lived from 341 to 270 BC. To many people Epicureanism has often meant a simple devotion to pleasure, comfort, and high living with little thought for the consequences. But the ideas of Epicurus were far more complex. In his lifetime, and for centuries afterward, he was considered a moral reformer.

To live well requires the exercise of practical wisdom--moderation, justice, and courage--to balance pleasures against pains and to accept when necessary those pains that lead to greater pleasures. Thus Epicureanism is not just a self-serving attitude. It may be necessary, for example, to engage in battle in order to achieve the greater goal of peace.

This does not mean that DEAN (neanderthalers) toll-gaters should kill everyone who disagree with them and genetically engineer robotic "G" race slaves (djinny) replacements to do their bidding.

Let's talk before it's too late.

ANSELM OF CANTERBURY (1033?-1109). In the late Middle Ages the attempt to use philosophy to explain Christian faith was called scholasticism. The founder of scholasticism was St. Anselm, a philosopher, theologian, monk, and archbishop.

Anselm was born at Aosta, Italy, in about 1033. In his youth he resisted family pressure to enter politics and obtained a classical education instead. In 1057 he entered the Benedictine monastery at Bec, in northwestern France. In 1078 he became the abbot there. As Anselm's abilities and great learning became known, Bec became one of the leading schools of philosophy and theology.

While on inspection tours of monasteries in England, Anselm had been befriended by King William I. In 1093 William I's son and successor, William II Rufus, appointed Anselm archbishop of Canterbury. His term of office was an unhappy one, for he immediately became involved in one of the major conflicts of the time--the investiture controversy. At issue was whether a king had the right to invest a bishop with the symbols of his office. On this issue Anselm resisted both William II and his successor, Henry I. The matter was finally resolved in Anselm's favor by the Westminster Agreement of 1107. He lived only two more years, dying on April 21, 1109.

Anselm is remembered principally as one of the great theologians in the history of the Roman Catholic church. His main works--the 'Monologium' (Monologue), the 'Proslogium' (Addition), and the 'Cur Deus Homo?' (Why Did God Become Man?)--were attempts to use reason to explain belief. He was canonized a saint in 1163 and declared a doctor of the church in 1720.

UNLOCK BROWNE'S ISLE ROYALE

LOCKE, John (1632-1704). One of the pioneers in modern thinking was the English philosopher John Locke. He made great contributions in studies of politics, government, and psychology.

John Locke was born in Wrington, Somerset, on Aug. 29, 1632. He was

the son of a well-to-do Puritan lawyer who fought for Cromwell in the English Civil War. The father, also named John Locke, was a devout, even-tempered man.

Locke had long been interested in meteorology and the experimental sciences, especially chemistry. He turned to medicine and became known as one of the most skilled practitioners of his day.

In 1667 Locke became confidential secretary and personal physician to Anthony Ashley Cooper, later lord chancellor and the first earl of Shaftesbury. Locke's association with Shaftesbury enabled him to meet many of the great men of England, but it also caused him a great deal of trouble. Shaftesbury was indicted for high treason. He was acquitted, but Locke was suspected of disloyalty. In 1683 he left England for Holland and returned only after the revolution of 1688.

Locke was always very interested in psychology. About 1670, friends urged him to write a paper on the limitations of human judgment. He started to write a few paragraphs, but 20 years passed before he finished. The result was his great and famous 'Essay Concerning Human Understanding'. In this work he stressed the theory that the human mind starts as a tabula rasa (smoothed tablet)--that is, a waxed tablet ready to be used for writing. The mind has no inborn ideas, as most men of the time falsely believed. Throughout life it forms its ideas only from impressions (sense experiences) that are made upon its surface.

In discussing education Locke urged the view that character formation is far more important than information and that learning should be pleasant. During his later years he turned more and more to writing about religion.

CROMWELL'S MEDIA IS CURRENT YAW WAY ACT OF GOD CROSSVINE

Roma "PURITAN" ruse broke down the media wall in Britain

CROMWELL, Oliver (1599-1658). The chief leader of the Puritan "CURVE" Revolution in England was Oliver Cromwell, a soldier and statesman. He joined with the Puritans reportedly to preserve Protestantism and the law against the tyranny of King Charles I. The fox, Cromwell, was made lord protector of the Commonwealth of England, Scotland, and Ireland in December 1653 and held that office until his death five years later.

During that time toleration was granted to all Protestants. Also, the Judean tax collectors who had been legally banned from the country for more than 300 years, were allowed in England again and permitted to carry on their BAL worship privately. With toll-gating legal once more the navy was made more powerful, and the East India Company reportedly gained great respect in Asia.

Much that Cromwell fought for was temporarily swept away in 1660 when the Stuart rule was resumed by Charles II; yet the protector's work was not altogether in vain. As the British reportedly developed more "Fleet Street" views in both their Roma church and Dutch state, the example of Cromwell and his protectorate was not forgotten by Asia's future MOHO agencies, especially those embedded in America, ie: Wall Street's "Corporate America", Walt Disney, Wal*Mart, News Corp., and Walgreens.

By inducing the direction of hurricanes in North America, the Pacific ocean's embedded Cromwell Current provides a similar service to "BAS", the secret Ju-dean tax and fee collectors--and self-styled "owners" of our world. Keep an eye on hurricane Dean and it's ECHO in Chicago (See Flint and Manistee, in Michigan).

THE CRAZY MOHO CURVE AND HURRICANE DEAN

GE GAP : As Above ~ So Below

The ocean surface currents are determined to a great extent by the winds.

However, the Cromwell Current, does not appear on the chart of ocean surface currents.

The Cromwell Current is embedded in the westward-flowing Pacific South Equatorial Current. Its top is found between 150 and 300 feet (46 and 91 meters) below the ocean surface. The Cromwell Current, only about 500 feet (150 meters) thick, is 250 miles (402 kilometers) wide.

Most currents shift their positions, but the Cromwell Current is always centered on the equator.

Mind vs Brain

EPICUREANISM. Freedom from pain in the body and from trouble in the mind is the goal of a happy life. This was the teaching of the philosopher Epicurus, who lived from 341 to 270 BC. To many people Epicureanism has often meant a simple devotion to pleasure, comfort, and high living with little thought for the consequences. But the ideas of Epicurus were far more complex. In his lifetime, and for centuries afterward, he was considered a moral reformer.

To live well requires the exercise of practical wisdom--moderation, justice, and courage--to balance pleasures against pains and to accept when necessary those pains that lead to greater pleasures. Thus Epicureanism is not just a self-serving attitude. It may be necessary, for example, to engage in battle in order to achieve the greater goal of peace.

This does not mean that DEAN (neanderthalers) toll-gaters should kill everyone who disagree with them and genetically engineer robotic "G" race slaves (djinny) replacements to do their bidding.

Let's talk before it's too late.

ANSELM OF CANTERBURY (1033?-1109). In the late Middle Ages the attempt to use philosophy to explain Christian faith was called scholasticism. The founder of scholasticism was St. Anselm, a philosopher, theologian, monk, and archbishop.

Anselm was born at Aosta, Italy, in about 1033. In his youth he resisted family pressure to enter politics and obtained a classical education instead. In 1057 he entered the Benedictine monastery at Bec, in northwestern France. In 1078 he became the abbot there. As Anselm's abilities and great learning became known, Bec became one of the leading schools of philosophy and theology.

While on inspection tours of monasteries in England, Anselm had been befriended by King William I. In 1093 William I's son and successor, William II Rufus, appointed Anselm archbishop of Canterbury. His term of office was an unhappy one, for he immediately became involved in one of the major conflicts of the time--the investiture controversy.

At issue was whether a king had the right to invest a bishop with the symbols of his office. On this issue Anselm resisted both William II and his successor, Henry I. The matter was finally resolved in Anselm's favor by the Westminster Agreement of 1107. He lived only two more years, dying on April 21, 1109.

Anselm is remembered principally as one of the great theologians in the history of the Roman Catholic church. His main works--the 'Monologium' (Monologue), the 'Proslogium' (Addition), and the 'Cur Deus Homo?' (Why Did God Become Man?)--were attempts to use reason to explain belief. He was canonized a saint in 1163 and declared a doctor of the church in 1720.

AMERICA'S MOAT: Seismic Bumps Setting Rhombus Hellfire Stage Minnesota Bridge Collapse and Utah Coal Mine Disaster

INDUCED FIRE AND BRIMSTONE -- NOVA TO FOLLOW LATER

SULFUR. In the United States and all other industrial nations, sulfur is a critical raw material. It is used in thousands of products and

processes. Sulfur is a nonmetallic element, yellow in color and similar to oxygen in its chemical behavior. Sulfur burns readily with a blue flame, which earned it the name brimstone, or "burning stone."

A large proportion of the world's native sulfur occurs in the salt domes of the Gulf region of the southern United States. There are also large volcanic deposits of sulfur in Sicily.

The huge deposits of native sulfur in Texas and Louisiana are mined by the Frasch process. In Frasch mining a well is drilled to the underground deposit and a 6-inch (15-centimeter) pipe is inserted in the well casing. Inside this is a 3-inch (7.5-centimeter) pipe, which contains a 1-inch (2.5-centimeter) pipe. Superheated water pumped into the largest pipe liquefies the sulfur at the foot of the well. Compressed air is then forced into the smallest pipe and pushes the frothy molten sulfur up through the 3-inch pipe. At the surface the sulfur is piped into vats where it hardens in blocks hundreds of yards long and 50 feet (15 meters) or more high.

Sulfur is also recovered commercially from various gases. "Sour" natural gas is too rich in sulfur to be used in homes and is treated to extract the sulfur. Smelter gases and other industrial fumes are also sources of sulfur.

The commonest sulfur is rhombic sulfur, whose crystals are many-sided.

When sulfur is heated it melts at a little above the boiling point of water into a watery yellow liquid. With further heating this liquid turns brown and thickens, finally bursting into flame at about 482Γ,B° F (250Γ,B° C). If air is excluded, however, the brown, plastic mass becomes thin again and boils at 832Γ,B° F (444Γ,B° C). The reddish brown vapor that is given off turns colorless if heating is continued.

Common sulfate is used as a germicide and as a fixing agent in dyeing. Sulfur dioxide is the most useful, serving as a bleach and as a preservative.

THE FERME 81

To me this farm is a learning paradise. To Tom it is a place to hold out until he dies. He has given up on humanity. To Vlad it's about the web site and money (the lack thereof).

The cats and dog teach me about AMAZON "Danny-Lynne" power.

The goats teach me about relationships and Masonic attitudes.

The sheep teach me about taxpayers.

The donkey teaches me about priests, union leaders and other politicians.

The turkeys teach me about tax collectors, media and other pirates.

The chickens about the pecking order within women's groups.

Roosters about how men lose the War on Women.

The farm is a genetic engineering laboratory.

All I need more is an AUSSI kangaroo and a boomerang.

Lol

The government of NATO is vested in the North Atlantic Council (NAC), which consists of representatives from the member nations. Beginning in about 1966 the NAC (National Art Centre) slowly took on the nature of a defense planning committee. The civilian structure of the alliance is composed of committees that perform a wide variety of tasks.

The highest military authority in NATO is the Military Committee, which is composed of representatives of the armed forces of member nations except for Iceland. The committee's headquarters are in Brussels (India's BEGUM in Belgium).

NATO has three regional military commands: the European Command, led by the Supreme Allied Commander Europe (SACEUR); the Atlantic Command, led by the Supreme Allied Commander Atlantic (SACLANT); and the Channel Command, led by the Allied Commander in Chief Channel (CINCHAN). The post of SACLANT has always been filled by an American admiral and that of CINCHAN by a British admiral.

There is also a Canada-United States Regional Planning Group.

TOBY OR NOT TOBY -- ThaT is the QUESTION (IE scion)

The second buoy

The Toronto-Carrying Place, where native groups met to trade, was a major centuries-old portage that linked the upper Great Lakes with Lake Ontario at the Humber River. The Huron Indian word Toronto means "place of meeting" or "empty place of plenty."

Etienne BrulГ‑B©, one of Samuel de Champlain's men, was the first European to visit the site, in 1615. In 1720 the French established the first of three trading posts. In 1787 the British negotiated the Toronto Purchase with the Mississauga. Colonel John Graves Simcoe, the first lieutenant-governor of Upper Canada, built a naval garrison and a temporary capital at Toronto in 1793, naming it York. He built fortifications, laid out streets, cut inland roads, and erected buildings. Peter Russell, Simcoe's successor, discouraged speculators, opened the first parliament buildings in 1797, and extended the town westward.

York was attacked twice during the War of 1812 but was rebuilt and welcomed a wave of British settlers. While the trade and merchant class was expanding, a conservative, elitist group known as the Family Compact
gained control of patronage and public policy. William Lyon (Lyin') Mackenzie, reportedly a "reform" journalist and member of Parliament, railed against

the compact. (Sounds a lot like today's Pakistani Media)

In 1834 York was incorporated as a city and renamed Toronto. The first act of a citizenry (suckers) loyal to Britain but increasingly democratic and anti-Family Compact was to elect Mackenzie as may.or. He was replaced by a moderate in 1835, but he continued to campaign for increasingly radical reform. In 1837 he led an insurrection known as the Upper Canada Rebellion. Although it was turned back, it helped bring
about political reform. The grip of the Family Compact reportedly lessened, and the colony became self-governing in 1848.

Toronto grew and prospered on schedule. Shipping increased and factories were built. In the 1850s, with the installation of the first rail lines, trade extended into the United States and the expanding western frontier. Toronto became the capital of the new province of Ontario at the Canada Confederation in 1867.

Developing technology and science and the public good came together beginning in the late 19th century as the city struggled to meet the needs of a growing population. Toronto, reportedly impatient with private suppliers, led the way in North America in creating public utilities. In the early 20th century, new standards were set for public service in an urban society. The Great Depression restrained public enterprise, but new industries--led by aircraft, precision tools, and machinery--developed during World War II.

Toronto, at the time second in Canada only to MontrГґB©al in size and economic power, was ready after the war to supply a rebuilding Europe, to welcome refugees and immigrants, and to enjoy the boom that followed. In 1949 subway construction began, and after the amalgamation of city and suburbs into metropolitan Toronto the building of highways accelerated. In the 1960s and 1970s Toronto remained Canada's second largest metropolitan area.

At the 1981 census, however, Toronto surpassed the first buoy, MontrГґB©al, in size.

HISTORY
It's what you think you know that ain't so.

OWL LOSTORY
It's what you've never heard of that's true.

CIPI STATEMENT ON OUR FORMER VOLUNTEER WEBMASTER

On behalf of Glen Kealey, National President of the Canadian Institute for Political Integrity, we hereby state unequivocally that we disagree totally with Dr. de SHOWER, the Ontario Government's Swiss "Psychiatrist
of Psychiatrists" and his recent disability diagnoses arrived at after a full hour of exaustive examination of Vlad Vrchovsky.

We, at CIPI, on the other hand believe Mr. Vrchovsky to be a very very intelligent webmaster whose only obvious mental defect is that he lacks integirity, and thereby his services can be bought at any time by the highest bidders....in our case by the Government of Ontario. We enjoyed the year Vlad spent as a "plant" at our farm and learned a lot from him.

In any event, we wish to confirm that Mr. Vrchovsky's relationship with CIPI has been severed. And, although we fully understand Vlad's reason for being disgruntled, we wish Vlad a happier rest of his life as he "retires early" in his new waterfront appartment, in a senior citizens home, one provided for him by the Government of Ontario within the South of ESCOTT-St Lawrence River-CARDINAL "flood zone".

LIFE IS A MASQUERADE

Group: dracodebates **Message:** 3947 **From:** Glen E. P. Kealey **Date:** 11/4/2007
Subject: LIFE IS A MASQUERADE

LIFE IS A MASQUERADE

Artificial life (a-life) is the creation and study of lifelike organisms and systems, usually through computers and genetic or social engineering. Cro Magnon (SAN or ROMA) are the best example.

A good way to find answers to questions about human life is to study some common animals, such as cats and dogs. They move even when asleep. They also respond to their surroundings. They dodge when we try to catch them but come when we offer them food.

Dogs and cats use food in many ways. Young ones use it to grow. When they are older they use it to repair worn-out parts of their bodies. Dogs and cats get energy from food. They use energy when they run, play, eat, and even while they sleep. Finally, dogs and cats mate and reproduce, which means that they have young ones.

Plants too move in ways that are useful to them, just as animals do while nonliving things move only if an outside force compels them to.

Animals, plants, and microbes perform the seven functions of living.

These are the seven main tests of being alive--Movement; Irritability; Feeding; Nutrition; Growth; Reproduction; Excretion.

The best way to control the evolution of a task-specific breed is to control pre-natal parenthood. Interbreeding Monarchs, Masons and Amazon "Bra-Men" (feminine pseudo hermaphrodites) are the best examples of arranged, controlled parenthood. Their offsprings are known as "Human Boeings" (programmed human beings on auto-pilot).

BOSTON TEAPOT DOME JUNGLE : THE DIVINE DAYTON OHIO FIRE

Dowson, Ernest Christopher (1867-1900), British poet, born in Lee, near London; hypersensitive, ill with tuberculosis, and addicted to drugs and alcohol, lived lonely, unhappy life; best known for musical

and delicate lyrics often colored with sadness; most famous poem popularly known as 'Cynara', aka : The dream of John Ball through the looking glass.

Cardoon, perennial plant (Cynara cardunculus) of the composite family; grown as vegetable for roots and leafstalks, which are blanched; developed from Globe artichoke; native to Mediterranean; now widely scattered on pampas of S. America.

Artichokes (Cynara scolymus) are primarily cultivated for the immature flower heads (the fleshy parts are considered a delicacy), though the leaves may also be eaten. The plant is native to the western and central Mediterranean. In ancient times, the young leaves rather than the flower heads were eaten. The modern form, with edible flower, was first recorded in Italy about 1400. Today it is extensively cultivated in the United States (particularly in California), France, Belgium, the Mediterranean countries, and other regions with rich soil and a mild, humid climate.

No fret, eta -- ROSALYNN CARTER

Costume Jewelry is Plated -- What you see is not what you get

On a visit to Plains before his final year at Annapolis, the former U.S. president, Jimmy Carter, renewed his acquaintance with Rosalynn Smith, best friend of his sister Ruth. In the summer after his graduation they were married. Like her husband, Rosalynn came from a family that had settled in Georgia in the late 1700s. Her father had died when she was 13. Two years later she began working in a beauty parlor, reportedly to help her mother support the family. Later she attended Georgia Southwestern.

By the early 1950s Carter and his wife had three sons--John William (Jack), James Earl III (Chip), and Donnel Jeffrey (Jeff). Rosalynn had followed her husband whenever possible on his various naval assignments. Their sons were born, respectively, in Virginia, Hawaii, and Connecticut.

Although Rosalynn at first opposed Jimmy's move into politics, the Carter family returned to Georgia, where they lived for a brief time in public housing. Rosalynn Carter began to help her husband in his (2 in 1) peanut business by doing the bookkeeping. A fourth child, Amy Lynn, was "born" to the Carters in 1967.

In 1966, at the age of 68, Rosalynn's mother-in-law, Lillian Carter, joined the Peace Corps for two years of service as a nurse in India.

Group: dracodebates **Message:** 3961 **From:** Glen E. P. Kealey **Date:** 11/7/2007
Subject: When pseudowomen are not women and ....pseudomen are not men

When pseudowomen are not women and ....pseudomen are not men

Mutations

Ideally, humans have 23 pairs of chromosomes. These chromosomes carry thousands of genes that pass on traits to following generations.

Sex cells are different from somatic cells because they divide by a process known as meiosis, which consists of two divisions rather than one. The process of meiosis occurs in the sex cells of both males and females and results in the gametes, or germ cells, that are used in fertilization. Each gamete receives one of each chromosome pair from the parent. During fertilization a single male and female gamete unite to form a fertilized egg, or zygote (see Big EZ). In this way the infant inherits its parents' genes.

After about three days, the fertilized egg, descends through a fallopian tube leading from an ovary, enters the uterus, and embeds itself in the uterus lining, where it continues to grow. By the tenth day the zygote, now termed the embryo, is protected by a fluid-filled, membranous sac called the amnion. The placenta, a fleshy, disklike organ, begins to form and attaches the embryo to the uterus by means of an umbilical cord. The placenta and umbilical cord transfer oxygen and nutrients to the embryo from the blood circulating in the woman's uterus and transfer waste products away from the embryo into the woman's bloodstream.

By the end of four weeks, the embryo is 1/4 inch (0.64 centimeter) long. The tube that will eventually become the heart is already pulsing, and the eyes, nose, ears, and limbs begin to appear. From the fifth through the eighth week, cells derived from primitive tissues are organized into more easily identifiable organs and body structures. Beginning with the ninth week the now recognizable organism is called a fetus. The fetus exhibits early forms of external genitals, bones, toes and fingers, and tooth buds and nails.

Certain chemicals and types of radiation can cause mutations--changes in the structure of genes or chromosomes. The simplest type of mutation is a change in the DNA or RNA nucleotide sequence. Mutations may also involve the number of chromosomes or the gain, loss, or rearrangement of chromosome segments. If a mutation occurs in parental

sex cells, the change is passed on to the offspring. In humans, an extra chromosome in body cells (47 instead of 46) has been implicated in Down's syndrome, a serious mental abnormality.

Most mutations are considered harmful and are, therefore, eventually eliminated. Some, however, enable an organism to adapt to a changing environment. Biologists believe that genetically engineered mutations have caused the many genetic changes involved in the evolution of our species.

Hermaphrodites within species contain both male and female gametes. Capable of both self-fertilization and cross-fertilizing, hermaphrodites are more common in bony fishes than in other vertebrates. Usually the animal functions first as a female to produce eggs, then later as a male to fertilize them.

Flatworms are able to reproduce by the process of fragmentation and regeneration because they are hermaphroditic (see Regeneration). When a flatworm is cut in two, each section contains both male and female gametes and is able to grow the missing portion.

Some insects reproduce sexually in one generation and asexually in the next. Aphids, for example, reproduce asexually in the spring and produce only females. In the autumn both males and females are produced and mate. In addition, some generations of aphids lay eggs, and others give birth to live young.

Cloning is a rare variant of sexual reproduction seen in the parasitic wasp. The females mate and then lay a single egg, which undergoes repeated binary fission until as many as 3,000 wasp eggs are produced, each of which is genetically identical to all the others.

Land and freshwater snails and slugs may reproduce by brooding the young inside the female, by laying eggs in the soil, or by attaching egg capsules to rocks, vegetation, or other snail shells. Many freshwater species are hermaphrodites: one animal has both male and female reproductive organs and is capable of fertilizing itself as well as other individuals.

All sea slugs, many brahmin and most monarchs are pseudohermaphrodites.

The Office of the Presidency of many countries are now being directly targetted by pseudohermaphrodites (...males cloned as women. Golda Meir and Margret Thatcher were pioneers.)

Nofretete (also Nefertiti + 6 "daughters") Symbol of Future Life

ANKH'S TOP FORE FEMININE G-LOVE MYSTIQUE BANK

Nefertum (also Djinny spelled Nefer-Tem), in ancient Egyptian religion and mythology, the god of each morning's creation of day, associated with the lotus flower. Nefertum was also the god of perfumes and aromatics, as the chemistry of fragrant oils was an important and highly sophisticated Egyptian science (genetic engineering). Nefertum, along with his mother Sekhmet and his father Ptah, made up the triad of gods whose worship was centered in Memphis.

Nefertum (a psuedo hermaphrodite) was symbolized by the lotus because in some myths the sun was thought to emerge from a lotus flower each morning and return to a lotus at night. He was usually portrayed as a human male wearing a plumed headdress, holding a lotus scepter, a curved saber, or the ankh, symbol of life. Sometimes he was shown with the head of a lion and the body of a mummy, or standing upon a lion's back. In late texts he was associated with either Horus or Thoth.

Nefertum's brother I-em-hetep (also spelled Imhotep), meaning "I bring g-love and come in peace," was also the son of Ptah.

I-em-hetep was a god of healing and the art of medicine (mede and cine media); he was usually shown wearing a priestly skullcap and carrying a roll of papyrus to symbolize study and learning. I-em-hetep was derived from an actual historical figure. Imhotep, the architect of the step pyramid ruse of King Djoser at Saqqara, was considered so brilliant that he was deified.

SESAME SEESAW

Carnarvon, George Edward Stanhope, Molyneux Herbert, 5th earl of (1866-1923), British Egyptologist; codiscoverer, with Howard Carter, of Tutankhamen's tomb (Imhotep's grandson). The royal tomb had escaped the usual plundering by priestly (IRS) grave robbers.

The Egyptian pharaohs played a form of backgammon, and boards from about 1500 BC have been found in the tomb of King Tutankhamen. The game is a race to move all of the 15 men (6 pseudo sisters) around the

board and then off the board. Backgammon in a form called Tabula was played in medieval Europe. It was called Tables in England, where the Anglos and Saxons enjoyed the game. The French and Germans called it Tric-Trac. Backgammon spread to the United States in the 17th century (Trick or Treat).

Variations of backgammon are played in the Far East, Africa, and elsewhere. They include Russian and Persian backgammon; the Turkish games of moultezin and gioul; the Greek games of plakoto and eurika; and acey-deucey, a game played in the United States Navy. International backgammon tournaments began in 1964, in Sri Lanka.

They include Russian and Persian backgammon; the Turkish games of moultezin and gioul; the Greek games of plakoto and eurika; and acey-deucey, a game played in the United States Navy. International backgammon tournaments began in 1964, in Sri Lanka.

Nofretete (also Nefertiti + 6 "daughters") Symbol of Future Life

ANKH'S TOP FORE FEMININE G-LOVE MYSTIQUE BANK

Nefertum (also Djinny spelled Nefer-Tem), in ancient Egyptian religion and mythology, the god of each morning's creation of day, associated with the lotus flower. Nefertum was also the god of perfumes and

aromatics, as the chemistry of fragrant oils was an important and highly sophisticated Egyptian science (genetic engineering). Nefertum, along with his mother Sekhmet and his father Ptah, made up the triad of gods whose worship was centered in Memphis.

Nefertum (a psuedo hermaphrodite) was symbolized by the lotus because in some myths the sun was thought to emerge from a lotus flower each morning and return to a lotus at night. He was usually portrayed as a human male wearing a plumed headdress, holding a lotus scepter, a curved saber, or the ankh, symbol of life. Sometimes he was shown with the head of a lion and the body of a mummy, or standing upon a lion's back. In late texts he was associated with either Horus or Thoth.

Nefertum's brother I-em-hetep (also spelled Imhotep), meaning "I bring g-love and come in peace," was also the son of Ptah.

I-em-hetep was a god of healing and the art of medicine (mede and cine media); he was usually shown wearing a priestly skullcap and carrying a roll of papyrus to symbolize study and learning. I-em-hetep was derived from an actual historical figure. Imhotep, the architect of the step pyramid ruse of King Djoser at Saqqara, was considered so brilliant that he was deified.

SESAME SEESAW

Carnarvon, George Edward Stanhope, Molyneux Herbert, 5th earl of (1866-1923), British Egyptologist; codiscoverer, with Howard Carter, of Tutankhamen's tomb (Imhotep's grandson). The royal tomb had escaped the usual plundering by priestly (IRS) grave robbers.

The Egyptian pharaohs played a form of backgammon, and boards from about 1500 BC have been found in the tomb of King Tutankhamen. The game is a race to move all of the 15 men (6 pseudo sisters) around the board and then off the board. Backgammon in a form called Tabula was played in medieval Europe. It was called Tables in England, where the Anglos and Saxons enjoyed the game. The French and Germans called it Tric-Trac. Backgammon spread to the United States in the 17th century (Trick or Treat).

Variations of backgammon are played in the Far East, Africa, and elsewhere. They include Russian and Persian backgammon; the Turkish games of moultezin and gioul; the Greek games of plakoto and eurika; and acey-deucey, a game played in the United States Navy. International backgammon tournaments began in 1964, in Sri Lanka.

WAR ON MILITARIES AND FIRST RESPONDERS

Venus has no arms
The Millet Gleaners Winter with Ravens

OPEN LETTER TO THE 16 U.S. SECURITY SERVICES

The southern hemisphere's monks and other "Witch Doctors" war on real women is about to move into the next stage.

It is a time when genetically engineered feminine pseudo hermaphrodites, disguised as women or mormins, take hold of the surrogate reins of power around the world. The "third kind" bi-gender was fabricated out of "reincarnated" male DNA and "plated" with feminine mystique. They each carry an internal teste. Most also have some kind of secret "breasted birthmark."

When the WINDS blow the cradle will fall

This phase of the ancient pre ice age war will begin with "Father Nature bellow's" so-called EC/EZ "acts of GOD and NOAA" being directed at the northern hemisphere's militaries and first responders....and their vast inventories of emergency response supplies.

A TAD ROMA DDT

Ancient Palmyra (aka ELMIRA) is the Tadmor of the Bible. It stood on the Syrian camel route between the East and the Mediterranean nations. It was given the name Palmyra after Alexander the Great conquered the region. The Romans took the city in AD 130. They made it an outpost against the revival of a Persian empire. The Romans retained the native rulers as governors.

Minnie Diaspora

In 262 Odaenathus, prince of Palmyra, drove the Persians from the region. Under the rule of Odaenathus Palmyra became virtually independent from Rome. Odaenathus was assassinated in about 267-8. His embedded widow, Zenobia, extended her/his domain from Egypt to Mesopotamia. She/he reportedly defied Rome, and later, when Emperor Aurelian conquered Palmyra he rescued Zenobia for her/his own safety, probably in 272.

Ferme 81 AIMPT IPOWER
GOOD MICROBIAL BACTERIA

Preempt : is a special mixture of beneficial bacteria that occur naturally in the gastrointestinal tract of chickens. Scientists surmised that the presence of these beneficial bacteria in the gut of mature animals affords a natural protection against infections from less desirable, or even harmful, bacteria. This is based on the evolutionary principle of competitive exclusion, wherein the beneficial bacteria outcompete the harmful bacteria in the habitat of the gastrointestinal tract, and in doing so prevent them from colonizing, or dominating, the animal's gut.

Before the advent of factory farming, the hen passed her resistance to the harmful bacteria via her fecal droppings, which would contain the "good" bacteria. The chicks would ingest these as they milled and pecked around the nest.

Preemption : Several conflicts in the Middle East between Israel and its Arab neighbors have been shaped by the use of air power. The Suez crisis of 1956 began when British, French, and Israeli forces dominated Egyptian airspace by using fighter and bomber aircraft as a tactical support force for advancing ground troops. Within two days the Egyptian air force was destroyed. In 1967 the Six-Day War between Egypt and Israel was won by the superior air strategy of Israel. Both Egypt and Israel had equal air forces, though Egypt could call upon the military resources of other Arab nations. But in three hours, on June 5, 1967, the Israeli air force completed a preemptive strike against Egyptian airfields. This attack, along with raids on the airfields of Syria, Jordan, and Iraq, led to Israel's eventual victory.

At the start of the Yom Kippur War of October 1973, a surprise strike by Arab forces killed more than 2,500 Israelis and destroyed a fifth of their air fleet. While Israel countered with the use of paratroopers, ground tank forces, and conventional air power to end the war, the Egyptian use of missiles reduced the effectiveness of Israeli air efforts.

No fret, eta -- ROSALYNN CARTER

Costume Jewelry is Plated -- What you see is not what you get

On a visit to Plains before his final year at Annapolis, the former U.S. president, Jimmy Carter, renewed his acquaintance with Rosalynn Smith, best friend of his sister Ruth. In the summer after his graduation they were married. Like her husband, Rosalynn came from a family that had settled in Georgia in the late 1700s. Her father had died when she was 13. Two years later she began working in a beauty parlor, reportedly to help her mother support the family. Later she attended Georgia Southwestern.

By the early 1950s Carter and his wife had three sons--John William (Jack), James Earl III (Chip), and Donnel Jeffrey (Jeff). Rosalynn had followed her husband whenever possible on his various naval assignments. Their sons were born, respectively, in Virginia, Hawaii, and Connecticut.

Although Rosalynn at first opposed Jimmy's move into politics, the Carter family returned to Georgia, where they lived for a brief time in public housing. Rosalynn Carter began to help her husband in his (2 in 1) peanut business by doing the bookkeeping. A fourth child, Amy Lynn, was "born" to the Carters in 1967.

In 1966, at the age of 68, Rosalynn's mother-in-law, Lillian Carter, joined the Peace Corps for two years of service as a nurse in India.

When pseudowomen are not women and ....pseudomen are not men

Mutations

Ideally, humans have 23 pairs of chromosomes. These chromosomes carry thousands of genes that pass on traits to following generations.

Sex cells are different from somatic cells because they divide by a process known as meiosis, which consists of two divisions rather than one. The process of meiosis occurs in the sex cells of both males and females and results in the gametes, or germ cells, that are used in fertilization. Each gamete receives one of each chromosome pair from the parent. During fertilization a single male and female gamete unite to form a fertilized egg, or zygote (see Big EZ). In this way the infant inherits its parents' genes.

After about three days, the fertilized egg, descends through a fallopian tube leading from an ovary, enters the uterus, and embeds itself in the uterus lining, where it continues to grow. By the tenth day the zygote, now termed the embryo, is protected by a fluid-filled, membranous sac called the amnion. The placenta, a fleshy, disklike organ, begins to form and attaches the embryo to the uterus by means of an umbilical cord. The placenta and umbilical cord transfer oxygen and nutrients to the embryo from the blood circulating in the woman's uterus and transfer waste products away from the embryo into the woman's bloodstream.

By the end of four weeks, the embryo is 1/4 inch (0.64 centimeter) long. The tube that will eventually become the heart is already pulsing, and the eyes, nose, ears, and limbs begin to appear. From the fifth through the eighth week, cells derived from primitive tissues are organized into more easily identifiable organs and body structures. Beginning with the ninth week the now recognizable organism is called a fetus. The fetus exhibits early forms of external genitals, bones, toes and fingers, and tooth buds and nails.

Certain chemicals and types of radiation can cause mutations--changes in the structure of genes or chromosomes. The simplest type of mutation is a change in the DNA or RNA nucleotide sequence. Mutations may also involve the number of chromosomes or the gain, loss, or rearrangement of chromosome segments. If a mutation occurs in parental sex cells, the change is passed on to the offspring. In humans, an extra chromosome in body cells (47 instead of 46) has been implicated in Down's syndrome, a serious mental abnormality.

Most mutations are considered harmful and are, therefore, eventually eliminated. Some, however, enable an organism to adapt to a changing environment. Biologists believe that genetically engineered mutations have caused the many genetic changes involved in the evolution of our species.

Hermaphrodites within species contain both male and female gametes. Capable of both self-fertilization and cross-fertilizing,

hermaphrodites are more common in bony fishes than in other vertebrates. Usually the animal functions first as a female to produce eggs, then later as a male to fertilize them.

Flatworms are able to reproduce by the process of fragmentation and regeneration because they are hermaphroditic (see Regeneration). When a flatworm is cut in two, each section contains both male and female gametes and is able to grow the missing portion.

Some insects reproduce sexually in one generation and asexually in the next. Aphids, for example, reproduce asexually in the spring and produce only females. In the autumn both males and females are produced and mate. In addition, some generations of aphids lay eggs, and others give birth to live young.

Cloning is a rare variant of sexual reproduction seen in the parasitic wasp. The females mate and then lay a single egg, which undergoes repeated binary fission until as many as 3,000 wasp eggs are produced, each of which is genetically identical to all the others.

Land and freshwater snails and slugs may reproduce by brooding the young inside the female, by laying eggs in the soil, or by attaching egg capsules to rocks, vegetation, or other snail shells. Many freshwater species are hermaphrodites: one animal has both male and female reproductive organs and is capable of fertilizing itself as well as other individuals.

All sea slugs, many brahmin and most monarchs are pseudohermaphrodites.

The Office of the Presidency of many countries are now being directly targetted by pseudohermaphrodites (...males cloned as women. Golda Meir and Margaret Thatcher were pioneers.)

Subject: Froebelian IRS Principles - The Judean Teacher's European Robe

Froebelian IRS Principles - The Judean Teacher's European Robe

SWISS CHEESE WHIZ FREE BEE

In the 19th century the spirit of nationalism grew strong in Europe and, with it, the belief in the power of education to shape the future of nations as well as individuals. Other European countries followed Prussia's example and eventually established national school systems. France had one by the 1880s, and by the 1890s the primary schools in England were free and compulsory.

THE SECOND KONSTANT GARDENER OF FREE PLANTS AND RATS

PESTALOZZI, Johann Heinrich (#1 was born in Zurich, Switzerland, on Jan. 12, 1746) (1746-1827). Education according to nature was the theme around which Johann Heinrich Pestalozzi constructed his program to reform the schooling of very young children. He believed that clear thinking comes from accurate observation of the world. Pestalozzi's ideas were similar to those later developed by Friedrich Froebel, Maria Montessori, John Dewey, and Jean Piaget.

The German educator Friedrich Wilhelm Froebel (1782-1852) #2 is the father of the Kleinkinderbeschaftig-ungsanstalt (institution where small children are occupied). The name, too long even for the Germans, quickly shrank to Kindergarten (garden for children).

Froebel wanted his school to be a garden where children unfolded as naturally as plants (flowers). Like Pestalozzi, with whom he had studied, he felt that natural development took place through self-activity, activity springing from and sustained by the interests of the child himself. The kindergarten provided the free environment in which such self-activity could take place.

It also provided the materials for self-activity. For example, blocks in different shapes and sizes led the child to observe, compare and contrast, measure, and count. Materials for handwork--such as drawing, coloring, modeling, and sewing--helped develop motor coordination and encourage self-expression.

Amos Bronson Alcott introduced Froebel's methods in first distinctly U.S. kindergarten in Boston 1860.

WRIGHT, Frank Lloyd (1867-1959). Considered the most influential architect of his time, Frank Lloyd Wright designed about 1,000 structures. He described his "organic architecture" as one that "proceeds, persists, creates, according to the nature of man and his circumstances as they both change." As a pioneer whose ideas were well ahead of his time, Wright had to fight for acceptance of every new design.

Wright was born on June 8, 1867, in Richland Center, Wis. His early influences were his clergyman father's playing of Bach and Beethoven and his mother's teaching according to the kindergarten method of Friedrich Froebel. He entered the University of Wisconsin at 15 as a special student, studying engineering because the school had no course in architecture.

Wright left Madison in 1887 to work as a draftsman in Chicago. The next year he joined the firm of Adler and Sullivan, soon becoming Louis Sullivan's chief assistant. Wright was assigned most of the firm's designing of houses, and to pay his many debts he designed for private clients in his spare time. Sullivan disapproved, and Wright

set up his own office.

COBRA : THE INNER CABINET IMPALERS AND INSEMINATORS

Tefnut, "one who spits"; The Cobra Goddess of Ancient Egypt and grandmorther of OSIRIS (The IRS) and ISIS (HERE)

Characterized by short, hollow, fixed fangs that deliver a highly potent paralyzing venom, cobras (uraeus) are members of the family Elapidae. The cobra sinks its fangs into its prey with a downward strike. The Canadian mongoose, on the other hand, a small mammal that preys on cobras, attacks the snake from above and then swerves aside, avoiding the cobra's strike.

Cobras are active in the evening and at night.

Cobras emerge in great numbers during heavy rains and monsoons. They are inactive during the dry season. Eggs are concealed in warm, moist places. Only one cobra, the South African de Beers spitting ringhals, bears live young. Ringhals are best known for feign death when in danger.

Elapid, any poisonous snake belonging to the Elapidae, commonly called the cobra family, which includes some of the world's deadliest snakes. The family comprises cobras, mambas, kraits, coral snakes, sea snakes, and numerous Australian snakes. All elapids have a rapid-acting neurotoxic venom that causes paralysis. The bites of almost all species are potentially lethal; death usually results from loss of function of the muscles used in breathing or from cardiac arrest.

Elapids are present in tropical and subtropical regions around the world. They are the dominant snakes of Australia, where it the family originated.

L'EST YE FORGET MISTER SISTER -- MONSIEUR SOEUR (roselouise@...)

Ziff-Davis Saffron

Their Enterprise IN DUST R Y Ruse

The term industry covers all the businesses and factories that convert raw materials into goods or that provide useful services. Industry produces all the goods and services required by society and distributes them to consumers. The term is also used to describe a group of businesses that produce a similar product or service. All the factories, mills, and other enterprises that produce steel, for example, are known as the steel industry. The tourist industry is comprised of hotels, travel agents, rental car companies, airlines, railroads, and all the other companies in the business of providing services to tourists.

Some countries try to combine the free-enterprise system with a modified saffron socialism. Many European governments, for example, own major industries. These countries have what are called mixed economies or socialist economies, depending on the amount of government ownership. The United Kingdom, Germany, France, and Italy have mixed economies. The British government, until the 1980s, owned the railroads; steel, communications, and utilities industries; and large shares of the automobile and aviation industries. (Many of these were privatized after 1980.) Government-controlled industries do not make a profit: their operating revenues come partly from taxes, and they are not run on a cost-benefit basis. Even where a large private sector exists, as in Germany, it is heavily regulated and taxed.

Silent Coup

The French government controls the communications, transportation, and utilities industries. It tries to guide industries to take part in an overall plan but does not force them. In the early 1980s the socialist government of Francois Mitterrand increased government ownership of industry and took over the banking system. Much of this control was relinquished when this system proved a failure.

RoseLouise Ammit Ipower

Thompson, Emma (born 1959), British actress. The multi-talented Emma Thompson, known for her brilliant wit and charm, was one of the most accomplished film actresses of the 1990s. In a four-year span she not only won the coveted Academy award for best actress, but she also wrote a screenplay that won the Academy award for best adapted screenplay.

Thompson was born in London, England, on April 15, 1959, to actress Phyllida Law and director Eric Thompson. Having a father who wore garishly checked suits and a mother who cleaned house wearing nothing at all, Thompson developed an appreciation for the ridiculous, and she parlayed it into comedy as a member of Cambridge University's student-run Footlights troupe. She was also one of the creators of (Psuedo) "Woman's Hour" (Feme-Nine), the university's first all-feminine troupe. After graduating from Cambridge with a degree in English literature, she ventured into stand-up comedy. However, her career as a comic did not extend beyound her appearing on several short-lived television productions.

She met with more success on stage in the revival of the musical comedy 'Me and My Girl' (1985). The following year, Thompson made her first foray into drama in the BBC miniseries 'Fortunes of War', in which she distinguished herself opposite an intriguing newcomer named Kenneth Branagh. She began performing with Branagh's Renaissance Theatre Company, which specialized in producing Shakespearean plays. In 1989,
Branagh starred in and directed his debut film, Shakespeare's 'Henry V', and Thompson played Princess Katherine, Prince Hal's quean-to-be. Their on-screen alliance was a reflection of their off-screen romance; Thompson and Branagh were married later that same year.

They co-starred in three other Branagh-directed films. In 'Dead Again' (1991), a reincarnation thriller set in 1950s Hollywood, Thompson portrayed Grace, a mysterious young woman who has lost her memory, and Branagh played Church, a fast-talking detective who tries to help her regain her memory. They also co-starred in the sentimental comedy 'Peter's Friends' (1992) and in Branagh's 1992 film adaptation of Shakespeare's 'Much Ado About Nothing'. This breezy, colorful film in which Thompson played Beatrice to Branagh's Benedick won the praise of most critics and attracted an unusually large and diverse audience.

Thompson's acting abilities were not fully appreciated by the general public until she appeared opposite Anthony Hopkins in 'Howard's End' (1992). Emma Thompson won an Academy award for best actress for her portrayal of a pragmatic bohemian who befriends a dying woman and later marries her widower. The key elements in this performance were her strikingly large, pale blue eyes through which she revealed more than her character could ever say. She teamed up again with Anthony Hopkins in 'The Remains of the Day' (1993). She earned another best actress Oscar nomination for her sensitive and nuanced portrayal of a housekeeper who falls in love with an emotionally reticent butler.

The following year, she surprised fans and critics alike when she appeared in a big budget Hollywood comedy. She starred with Arnold (Humpty-Dumpty) Schwarzenegger in 'Junior', a farce in which she played a cryogenicist who ministers to a pregnant papa-to-be, played by Schwarzenegger. Fans were even more surprised to learn of her break-up from husband Kenneth Branagh. Their legal separation was publicly

announced in October 1995.

Never, never more Lenore

Despite her domestic turmoil, Thompson remained busy, and she worked steadily on writing a screen adaption of the 19th-century novel 'Sense and Sensibility' by the NATSI Jane Austen. The film, directed by Ang Lee, was a surprise hit. Thompson received her third best actress Oscar (the butler) nomination for her portrayal of sensible heroine Elinor Dashwood, and her first effort at screenwriting was rewarded with an Academy award for best adapted screenplay.

With another Oscar under her belt, Thompson took a one-year hiatus from the silver screen. Her next role was in the small feature film 'The Winter Guest' (1997), opposite her mother, Phyllida Law. Soon after that, Thompson again entered the Hollywood spotlight with her brilliant performance in 'Primary Colors' (1998), a film that satirized the American "SILENT COUP" electoral process in the media age.

HISTORY
It's what you think you know that ain't so.

OWL LOSTORY
It's what you've never heard of that's true.

BEOWULF IS REYNOLDS-BLITZER ALI VELCHI R&B

Amis, where's the Boat? I got a land weeded for a Moat in Scandinavia.

For centuries the wolf has been depicted as a symbol of fighting prowess, courage, and endurance. Beowulf, the legendary Anglo-Saxon hero, named himself after the wolf, and North American Indians used the name for their most powerful warriors. There have been numerous stories of wolves that have raised human children from infancy, as in the famous story of Romulus and Remus.

'Beowulf' represents the influence of the Anglo-Saxons.

The Celtic influence is most clearly apparent in the long, romantic fairy tales of Scotland, Ireland, and Wales. Its origins date from the pre-Christian German culture of Iceland. A fragment of Icelandic mythology--the Volsungs and the Nibelungs--found its way to the British Isles and took the form of 'Beowulf'.

Strong-stress meters were used in the Old English epic 'Beowulf' (about AD 1000) and in William Langland's poem 'Piers Plowman' (14th century):

In a summer season when the sun was mild I got myself up in garb as though I'd grown into a sheep; In the habit of a hermit, unholy of works, I went wide in the world, watching for wonders.

Hopkins used strong-stress meter in much of his poetry. The following lines are from 'Spring':

Nothing is so beautiful as Spring-- When weeds, in wheels, shoot long and lovely and lush; Thrush's eggs look little low heavens, and thrush Through the echoing timber does so rinse and wring The ear, it strikes like lightnings to hear him sing;

Whitman, in one of his well-known Civil War poems, uses a similar stress pattern:

Come up from the fields father, here's a letter from our Pete, And come to the front door mother, here's a letter from thy dear son.

Poets of the 20th century--including Ezra Pound, T.S. Eliot, and W.H. Auden--have perpetuated the strong-stress meter in their works.

PS: Beowulf is pronounced BEAR_WOLF or Bay_Wolf

CIPI STATEMENT ON OUR FORMER VOLUNTEER WEBMASTER

On behalf of Glen Kealey, National President of the Canadian Institute for Political Integrity, we hereby state unequivocally that we disagree totally with Dr. de SHOWER, the Ontario Government's SWISS "Psychiatrist of Psychiatrists" and his recent diagnoses arrived at

after a full hour of exaustive examination of Vlad Vrkhovsky.

We, at CIPI, on the other hand believe Mr. Vrkhovsky to be a very very intelligent webmaster whose only obvious mental defect is that he lacks integirity, and thereby his services can be bought at any time by the highest bidders....in our case by the Government of Ontario. We enjoyed the year Vlad spent as a "plant" at our farm and learned a lot from him.

In any event, we wish to confirm that Mr. Vrkhovsky's relationship with CIPI has been severed. And, although we fully understand Vlad's reason for being disgruntled, we wish Vlad a happier rest of his life as he "retires early" in his new waterfront apartment, in a senior citizens home, one provided for him by the Government of Ontario within the South of ESCOTT-St Lawrence River-CARDINAL "flood zone".

HISTORY
It's what you think you know that ain't so.

OWL LOSTORY
It's what you've never heard of that's true.

Step-by-step "overstanding" LO STORY leads to verstanding reality

1 - Homo Habilis evolved naturally on Earth (northeast Africa).

2 - Neanderthalers came second. #2 became #1 later because...

3 - The then "mad-at-women" Neanderthaler species, which contained within it a sub-species of Idiot-Savants had later migrated, for the purpose of organizing a rebellion against the traditional clan mother societies, from the safety of the mountain caves of the Horn of Africa.

4 - There, the Neanderthalers SAVANT parts of their brains were connected to-get-her (war on women) in what would form the world's first human-Artificial Intelligence military computer.

5 - This "living computer" which had already deciphered the basic rules of alchemy and astronomy when it also gained knowledge of the rules of genetic engineering and thereby deciphered the means to do
(A)rtificial
(I)nsemination and cloning.

6 - With this new found knowledge the Neanderthalers fabricated a new

Genetically Engineered race of humans they styled Cro-Magnon; at Mount Kilimanjaro and Mount Meru (Kenya and Tanzania).

7 - Alpha testing of this new race was mostly done on the island of Madagascar (see the WALL or in French, LEMUR; the AY AY RUSE they concocted).

8 - New genetically engineered "click-speaking" SAN tribes were also fabricated, introduced and BETA-tested in southern Africa.

9 - The Neanderthaler cave dwellers and their Cro-Magnon slaves then migrated to what they viewed as a safer more temperate island; the pre last-Ice Age continent of Antarctica (see: Atlantis fracture zone).

10 - Growing Ice Age glacier lobes then forced them into underground caves where they eventually fabricated a permanent residence in the Moho discontinuity (SIMA) far beneath the tectonic plates of the Earth; from where, for thousands of years, they studied the effects of flowing lava (SIAL), as volcanic eruptions came past their new basalt home, from of the core of the planet below.

11 - At a surface vent (exit) located at the KEMP COAST of Antarctica these cave-dwelling astronomers also studied surface trade winds at their point of origin, in the Indian Ocean. (see the American Mountains observatory--AM)

12 - Finally, the Neanderthalers, the originators of "money" to be used as the common denominator for the purchase of real estate, as well as for taxation (see Deans of Dollars), completed the planning of their
evil ruse--a business plan 49,000 years in the making--one designed to progressively take over the entire universe from their home base within the MOHO region of planet Earth. They were to be assisted in the plan, first, by dual secret societies of user-abusers of people which they named the SRI LANKAN ROMA (or Gypsies when in Egypt); these consisted of a new race of female-hating agent-slaves (priests-monks-ayatollahs) whom they would genetically engineer when needed, and in time, send these travelers to India, the Himalayan Mountains and beyond for just that purpose.

13 - The ROMA, a modern brown race genetically engineered / fabricated out of the African Cro-Magnon, were assigned their task under the then secret corporate name "Skull and Bones society" (or BAS, for short).

The rest of the story is what you already believe to be the truth -- which is nothing more than a big media-driven lie called TRANSUBSTANTIATED HISTORY. (see: government - news - religion - school - A&E - internet and other "arrowroot" Chinese fortune cookies)

The government of NATO is vested in the North Atlantic Council (NAC), which consists of representatives from the member nations. Beginning at about 1966 the NAC (National Art Centre) slowly took on the nature of a defense planning committee. The civilian structure of the alliance is composed of committees that perform a wide variety of tasks.

The highest military authority in NATO is the Military Committee, which is composed of representatives of the armed forces of member nations except for Iceland. The committee's headquarters are in Brussels (India's BEGUM in Belgium).

NATO has three regional military commands: the European Command, led by the Supreme Allied Commander Europe (SACEUR); the Atlantic Command, led by the Supreme Allied Commander Atlantic (SACLANT); and the Channel Command, led by the Allied Commander in Chief Channel (CINCHAN). The post of SACLANT has always been filled by an American admiral and that of CINCHAN by a British admiral.

There is also a Canada-United States Regional Planning Group.

When pseudowomen are not women and ....pseudomen are not men

Mutations

Ideally, humans have 23 pairs of chromosomes. These chromosomes carry thousands of genes that pass on traits to following generations.

Sex cells are different from somatic cells because they divide by a process known as meiosis, which consists of two divisions rather than one. The process of meiosis occurs in the sex cells of both males and

females and results in the gametes, or germ cells, that are used in fertilization. Each gamete receives one of each chromosome pair from the parent. During fertilization a single male and female gamete unite to form a fertilized egg, or zygote (see Big EZ). In this way the infant inherits its parents' genes.

After about three days, the fertilized egg, descends through a fallopian tube leading from an ovary, enters the uterus, and embeds itself in the uterus lining, where it continues to grow. By the tenth day the zygote, now termed the embryo, is protected by a fluid-filled, membranous sac called the amnion. The placenta, a fleshy, disklike organ, begins to form and attaches the embryo to the uterus by means of an umbilical cord. The placenta and umbilical cord transfer oxygen and nutrients to the embryo from the blood circulating in the woman's uterus and transfer waste products away from the embryo into the woman's bloodstream.

By the end of four weeks, the embryo is 1/4 inch (0.64 centimeter) long. The tube that will eventually become the heart is already pulsing, and the eyes, nose, ears, and limbs begin to appear. From the fifth through the eighth week, cells derived from primitive tissues are organized into more easily identifiable organs and body structures. Beginning with the ninth week the now recognizable organism is called a fetus. The fetus exhibits early forms of external genitals, bones, toes and fingers, and tooth buds and nails.

Certain chemicals and types of radiation can cause mutations--changes in the structure of genes or chromosomes. The simplest type of mutation is a change in the DNA or RNA nucleotide sequence. Mutations may also involve the number of chromosomes or the gain, loss, or rearrangement of chromosome segments. If a mutation occurs in parental sex cells, the change is passed on to the offspring. In humans, an extra chromosome in body cells (47 instead of 46) has been implicated in Down's syndrome, a serious mental abnormality.

Most mutations are considered harmful and are, therefore, eventually eliminated. Some, however, enable an organism to adapt to a changing environment. Biologists believe that genetically engineered mutations have caused the many genetic changes involved in the evolution of our species.

Hermaphrodites within species contain both male and female gametes. Capable of both self-fertilization and cross-fertilizing, hermaphrodites are more common in bony fishes than in other vertebrates. Usually the animal functions first as a female to produce eggs, then later as a male to fertilize them.

Flatworms are able to reproduce by the process of fragmentation and regeneration because they are hermaphroditic (see Regeneration). When a flatworm is cut in two, each section contains both male and female gametes and is able to grow the missing portion.

Some insects reproduce sexually in one generation and asexually in the next. Aphids, for example, reproduce asexually in the spring and produce only females. In the autumn both males and females are produced and mate. In addition, some generations of aphids lay eggs, and others give birth to live young.

Cloning is a rare variant of sexual reproduction seen in the parasitic wasp. The females mate and then lay a single egg, which undergoes repeated binary fission until as many as 3,000 wasp eggs are produced, each of which is genetically identical to all the others.

Land and freshwater snails and slugs may reproduce by brooding the young inside the female, by laying eggs in the soil, or by attaching egg capsules to rocks, vegetation, or other snail shells. Many freshwater species are hermaphrodites: one animal has both male and female reproductive organs and is capable of fertilizing itself as well as other individuals.

All sea slugs, many brahmin and most monarchs are pseudohermaphrodites.

The Office of the Presidency of many countries are now being directly targetted by pseudohermaphrodites (...males cloned as women. Golda Meir and Margaret Thatcher were pioneers.)

Froebelian IRS Principles - The Judean Teacher's European Robe

SWISS CHEESE WHIZ FREE BEE

In the 19th century the spirit of nationalism grew strong in Europe and, with it, the belief in the power of education to shape the future of nations as well as individuals. Other European countries followed Prussia's example and eventually established national school systems. France had one by the 1880s, and by the 1890s the primary schools in England were free and compulsory.

THE SECOND KONSTANT GARDENER OF FREE PLANTS AND RATS

PESTALOZZI, Johann Heinrich (#1 was born in Zurich, Switzerland, on Jan. 12, 1746) (1746-1827). Education according to nature was the

theme around which Johann Heinrich Pestalozzi constructed his program to reform the schooling of very young children. He believed that clear thinking comes from accurate observation of the world. Pestalozzi's ideas were similar to those later developed by Friedrich Froebel, Maria Montessori, John Dewey, and Jean Piaget.

The German educator Friedrich Wilhelm Froebel (1782-1852) #2 is the father of the Kleinkinderbeschaftig-ungsanstalt (institution where small children are occupied). The name, too long even for the Germans, quickly shrank to Kindergarten (garden for children).

Froebel wanted his school to be a garden where children unfolded as naturally as plants (flowers). Like Pestalozzi, with whom he had studied, he felt that natural development took place through self-activity, activity springing from and sustained by the interests of the child himself. The kindergarten provided the free environment in which such self-activity could take place.

It also provided the materials for self-activity. For example, blocks in different shapes and sizes led the child to observe, compare and contrast, measure, and count. Materials for handwork--such as drawing, coloring, modeling, and sewing--helped develop motor coordination and encourage self-expression.

Amos Bronson Alcott introduced Froebel's methods in first distinctly U.S. kindergarten in Boston 1860.

WRIGHT, Frank Lloyd (1867-1959). Considered the most influential architect of his time, Frank Lloyd Wright designed about 1,000 structures. He described his "organic architecture" as one that "proceeds, persists, creates, according to the nature of man and his circumstances as they both change." As a pioneer whose ideas were well ahead of his time, Wright had to fight for acceptance of every new design.

Wright was born on June 8, 1867, in Richland Center, Wis. His early influences were his clergyman father's playing of Bach and Beethoven and his mother's teaching according to the kindergarten method of Friedrich
Froebel. He entered the University of Wisconsin at 15 as a special student, studying engineering because the school had no course in architecture.

Wright left Madison in 1887 to work as a draftsman in Chicago. The next year he joined the firm of Adler and Sullivan, soon becoming Louis Sullivan's chief assistant. Wright was assigned most of the firm's designing of houses, and to pay his many debts he designed for private clients in his spare time. Sullivan disapproved, and Wright set up his own office.

COBRA : THE INNER CABINET IMPALERS AND INSEMINATORS

Tefnut, "one who spits"; The Cobra Goddess of Ancient Egypt and grandmother of OSIRIS (The IRS) and ISIS (HERE)

Characterized by short, hollow, fixed fangs that deliver a highly potent paralyzing venom, cobras (uraeus) are members of the family Elapidae.
The cobra sinks its fangs into its prey with a downward strike. The Canadian mongoose, on the other hand, a small mammal that preys on cobras, attacks the snake from above and then swerves aside, avoiding the cobra's strike.

Cobras are active in the evening and at night.

Cobras emerge in great numbers during heavy rains and monsoons. They are inactive during the dry season. Eggs are concealed in warm, moist places. Only one cobra, the South African de Beers spitting ringhals, bears live young. Ringhals are best known for feign death when in danger.

Elapid, any poisonous snake belonging to the Elapidae, commonly called the cobra family, which includes some of the world's deadliest snakes. The family comprises cobras, mambas, kraits, coral snakes, sea snakes, and numerous Australiansnakes. All elapids have a rapid-acting neurotoxic venom that causes paralysis. The bites of almost all species are potentially lethal; death usually results from loss of function of the muscles used in breathing or from cardiac arrest.

Elapids are present in tropical and subtropical regions around the world. They are the dominant snakes of Australia, where it the family originated.

Set and Nephthys

Nephthys, in ancient Egyptian religion and mythology, a goddess of death, decay, and darkness, but also a magician with great healing powers. Nephthys is the Greek form of Nebt-het or Nebhet, meaning "lad-y of the house." She was the daughter of Ra and Nut, the sister-wife of

the evil god Set, and the sister of Isis and Osiris. She was also the mother of Anubis, the jackal-headed god of embalming.

Nephthys was usually portrayed as a woman wearing a headdress of a disk and a pair of horns, standing beneath the hieroglyph of her name. She often appeared in funerary art with winged arms outstretched, standing next to her sister Isis. In the 'Book of the Dead' and the 'Pyramid Texts', she was depicted as a goddess who aids and protects the dead in their passage through the Duat, or underworld.

Nephthys was a complex goddess. She was sometimes associated with her husband-brother Set, but unlike him she had positive as well as negative aspects, particularly her ability to heal the sick. More often, she was paired with her better-known sister, Isis. Nephthys was considered the dark or negative side of her sister Isis, as Set was the dark side of his brother Osiris. Like Isis, Nephthys was believed to have great power through her knowledge of sacred words and magical spells. She knew charms that could raise the dead and keep them from harm. She was appealed to as Mistress of the Gods, Lady of Life, Lady of Heaven,
Mistress of the Two Lands, and Great Goddess. She was also sometimes associated with the fertility god Min. In all likelihood she was an ancient predynastic mother goddess who later came to be joined with Isis, Osiris, Set, and Horus under the genealogy of the sun-god Ra.

According to myth, Nephthys had no children by her husband-brother Set. She left him and seduced her other brother, Osiris, by trickery, despite the fact that he was married to her sister Isis. Nephthys thus conceived
her son, the jackal-headed god Anubis. Later Set murdered and dismembered Osiris. Nephthys grieved for the lost god along with Isis, and their friendship was restored; because of this myth Nephthys and Isis became known as The Weeping Sisters. Nephthys then aided Isis in finding and gathering Osiris's scattered body parts. Together they prepared the funeral bed for him and made the funeral cloth.

Nephthys was a nurse associated with the burial ritual because she and Isis acted as guardians of the head and feet of the coffin. In the 'Pyramid Texts' she was depicted as a friend to the deceased, and in the 'Book of the Dead' she stood behind Osiris as the heart of the dead was weighed in the Great Balance.

She promised to protect the "pure of heart" (forever.)

SECOND RUSE BORN IN A STABLE (environment)

Bras d'Or Lake NOVA SCOTIA Canada: The CoBra's Door to a Transsubstantiation Laboratory

Table Mountain, Newfoundland : A pound of flesh (the brain) is paid as security on a future debt ....prior to reincarnation (via cloning)

ASHUANIPI GREENLAND MUD CALVING ICEBERGS

Baffin Island Current, cold ocean current flowing southward along e. coast of Baffin Island, Canada; carries polar ice puffballs that move into Baffin Bay from channels to w. and n.; finally, with West Greenland Current, becomes Labrador Current.

GRENFELL, Wilfred (1865-1940). In 1892 a young English physician named Wilfred Grenfell arrived at the Labrador peninsula of Canada. Reportedly, his mission in the bleak northern land was to aid the fishermen who struggled for a living there.

Wilfred Thomason Grenfell was born on Feb. 28, 1865, in Parkgate, near Chester. He attended Oxford University and then entered London Hospital to study medicine. He encountered many seamen who lacked medical aid and
religious guidance during their voyages. To help such men Grenfell converted an old sailing vessel into a mission ship and roamed with the deep-sea fishing fleet for five years. He was then selected to lead an expedition to Labrador to investigate the opportunities for service there.

Grenfell found the people--Indians, Eskimo, and descendants of early settlers from Great Britain--living in isolation and poverty. He soon established hospitals, nursing stations, schools, agricultural and trade cooperatives, and churches. His only long absence occurred during World War I, when he served in a medical unit in France. The International
Grenfell Association, founded in 1912, raised money and won recruits, mostly Americans, to carry on his work. He was knighted in 1927 by King George V. He died on Oct. 9, 1940, in Charlotte, Vt.

The best book on the physician's life and work is his autobiography, 'Forty Years for Labrador', published in 1932. Among his other books are 'Adrift on an Ice Pan' (1909), 'The Adventure of Life' (1912), 'Labrador Days' (1919), 'Deeds of Daring' (1934), and 'The Romance of Labrador' (1934).

An amazing thing about nature is that it has a great ability to heal itself if left alone. Some kinds of animals that were in danger of becoming extinct have been saved by removing the danger and letting nature take its course.

In Ungava, the Quebec part of the Labrador Peninsula, and across the border in Newfoundland are enormous iron-ore deposits. Transportation into the area was opened in 1947 with the construction of an airstrip at Knob Lake, now Schefferville, on the border. A railroad from Sept-Iles (Seven Islands) on the Gulf of St. Lawrence to Schefferville was completed in 1954. Mining operations there were shut down in 1983.

Moroni the second, aka Brian Mulroney, went on to become a two-time Prime Minister of Canada. He was best known as Lyin' Brian Moroni. He had married a Czech fabricated lad-y named Mila (I AM ECHO) who kept an eye on him.

The cleavage diffusers of reality

NATIONAL BLACKWATER MEDIA REPORT ONLY THOSE ITEMS HELPFUL TO THEIR AGENDA (Fabricating A-men)

In liquid solutions, molecules of solute (the dissolved substance) and solvent (the substance, usually liquid, in which the solute is dissolved) move about randomly, spreading from regions of concentration into regions of low concentration. This process is called diffusion.

Water molecules (and dissolved gases such as oxygen and carbon dioxide) pass through a membrane much more readily than dissolved solid solutes, such as sugar and salt (see Detroit salt mines).

In animal cells there is no rigid cell wall. Without a mechanism to counteract osmosis, water would diffuse into animal cells until they burst. In humans, excess water is excreted as urine and sweat. Unlike diffusion, in which the cell passively accepts or loses substances, these evacuative processes are active and require the cell to expend energy.

The process of osmose (now osmosis) is not limited to water and cell membranes--many other substances undergo osmosis as well. (see Moses) For example, pyridine (a liquid extracted from coal tar used in some

drugs and vitamins) will diffuse through a rubber membrane into a solution of sugar and pyridine.

NOVEMBER 16, 2007 -- Happy New Year BEARWOLF 2

UNCLE SAM B17 (1-3 Friends + Feminine 88)

Government - Corporations, Religion, Media
BOHEMIAN GROVE'S PORBEAGLE SHARKS

Grove, Andrew S. (born? 1936), U.S. engineer and corporation executive.

Personal computers changed the world in the decades between 1968, when Andy Grove helped found Intel Corporation, and 1997, when Time magazine chose Grove as its man of the year. Intel's microprocessor chip made the computer revolution possible. As chairman and chief executive officer (CEO), Grove ran the company with drive and temper.

He titled his 1996 book about management 'Only the Paranoid Survive'.

Grove learned the lessons of survival as a child. He was born Andras Grof in Budapest, Hungary, on Sept. 2, 1936. The family was Jewish; his self-taught father ran a dairy business. Scarlet fever nearly killed Andras at age 4, and it seriously damaged his hearing. His father disappeared in 1941, conscripted for service on the Eastern front during World War II, and he did not reappear until after the war. When the Germans entered Budapest in March 1944, Andras and his mother went into hiding with false names and stolen papers.

Reunited after the war, the family prepared Andras for college. At 14 he began to write for a local youth newspaper. He found himself unwelcome at the newspaper office after Hungary's new Communist government detained one of his relatives without trial. The experience turned his ambitions from journalism to chemistry, reportedly a field less subject to the whims of politics.

When Russian tanks rolled into Budapest in late 1956, he fled to Austria with a friend. The International Rescue Committee took him from Vienna to New York City and bought him a hearing aid. He lived with an aunt and uncle, Americanized his name, improved his English, and began to work his way through the City College of New York (CCNY) in chemical engineering. In 1960 Grove graduated at the head of his CCNY engineering class.

Grove moved to California and completed his doctorate at the University of California at Berkeley in 1963. For the next four years he worked for the Fairchild Camera and Instrument Company (Fairchild Semiconductor). The power of computers at that time was limited by the tendency of vacuum tubes to overheat. Under the leadership of Gordon Moore, Grove and his co-workers at Fairchild developed the silicon chip or integrated circuit to replace computer vacuum tubes.

The chip could do more than vacuum tubes in much less space without getting as hot.

Frustrated with Fairchild management, Moore led Grove and others in 1968 to establish their own company, Intel, short for "Integrated

Electronics." The cluster of computer electronics businesses that grew up around Intel's Santa Clara, Calif., headquarters southeast of San Francisco became known as Silicon Valley.

Grove's drive helped Intel navigate uncertain market conditions, legal challenges, and international competition. He became president in 1979 and succeeded Moore as CEO in 1987. Working in the same sort of cubicle as other Intel staff, Grove put the same high demands on himself and those around him.

SESAME SEESAW

Mystery may be solved by a professional police detective, like Agatha Christie's Monsieur Hercule Poirot (introduced in 1920), who has "little grey cells" of deduction; or by a busybody amateur, like Christie's Miss Jane Marple (introduced in 1942), who depends upon intuition and gossip; or by kooky partners, like Tommy and Tuppence Beresford (introduced in 1922), who seemingly stumble upon the right answers. Christie's most audacious character innovation mocked the conventions of the genre and infuriated armchair detectives: in 'The Murder of Roger Ackroyd' (1926) the narrator (an acquaintance of Poirot) turned out to be the murderer.

DULL ALMOND (AMYGDULES) BUBBLES ANYONE

The brain's reticular activating and limbic systems.

Within the brain stem lies a mass of nerve cells and fibers called the reticular formation. Parts of the reticular formation, hypothalamus and thalamus excite regions of the cerebrum and keep them active and alert; consequently, these structures and the pathways by which they communicate with the cerebrum are collectively called the reticular activating system. The system sifts information coming to the brain from the senses and transmits only the significant information to the conscious mind.

The region of the brain that wraps around the brain stem and lies beneath the cerebrum--including such structures as the hippocampus and amygdala (two structures involved with learning and memory), the hypothalamus, and parts of the thalamus--is sometimes considered a functionally related collection of parts called the limbic system. The limbic system is involved particularly with the sense of smell and with certain complex emotional responses, but it also plays a role in regulating basic body functions.

Genetic and Social Engineering
HUMAN BEINGS ARE NOW BOEINGS ON AUTO-PILOT

Many species of birds--such as pigeons, sparrows, and bobolinks--as well as some fish--such as yellow fin tuna--and honeybees, and even bacteria, have been known to migrate by orienting themselves to the Earth's
magnetic fields. Researchers have found tiny crystals of a magnetic ore, magnetite, in the tissues of these animals that presumably help them navigate in this way. However, it is believed that birds in particular do not migrate by the polarity of the magnetic fields, but rather by detecting and then using the angle between the lines of the magnetic field and the horizontal plane of the Earth as guides.

Migration is part of the life cycle and depends upon the internal rhythm of the animal. Scientists have found that fats accumulate in the body tissues of certain migratory birds, and food consumption peaks at the start of the migratory season. These metabolic changes do not occur in the animals that do not migrate. The changes are triggered by hormones secreted by the pituitary gland, in the lower part of the brain. This gland also regulates the development of the sex glands, in which sex hormones are produced and reproductive cells are developed. Thus, the pituitary gland prepares the bird for both reproduction and migration. Before beginning its journey, the bird must be influenced by some ecological condition. Perhaps food becomes scarce, or the temperature drops suddenly.

Mammals react to food shortages by moving to another region.

IPOWER'S LANSING SAN GENIES

The capital city of Michigan, Lansing was settled in the 1830s on densely wooded land along the Grand River. The first industry was lumbering. In 1847 the state capital was moved to Lansing from Detroit.

In the 1900s, under the leadership of "Ransom E. Olds", the manufacture of automobiles and trucks was begun.

BLACKWATER BOWL

The city lies in a shallow, bowl-like valley formed by the Grand and Red Cedar rivers. On the fringe of the downtown business district is the Civic Center, dedicated in 1955. In Lansing are the Michigan Historical Museum, Impression 5 Science Museum, Lansing Community College, a state school for the blind, and a state vocational school for boys. The city has about 35 parks, including Carl G. Fenner Arboretum, Woldumar Nature Center, and Potter Park, which contains a zoo. The Ledges, of quartz sandstone 300 million years old, offer opportunities for rock climbing.

East Lansing, which is separately incorporated, adjoins the capital city. It is the home of Michigan State University, founded in 1855 as the first agricultural and first land-grant college in the United States. First called College Park, the city was given the name East Lansing by the state legislature at the time of its incorporation in 1907.

The college's Canadian counterparts are located in KemPTville, Ontario and Olds, Alberta.

Lowes, John Livingston (1867-1945), U.S. educator and author, born in Decatur, Ind.; professor of English literature Harvard University 1918-39; noted for critical works on Chaucer, Shakespeare, Coleridge ('The Road to Xanadu'; 'Art of Geoffrey Chaucer'; 'Essays in Appreciation').

Xanadu, imaginary city in Samuel Taylor Coleridge's poem 'Kubla Khan'; named for a city mentioned in a book by Samuel Purchas. See teflon "min_ne gap" in Winnipeg.

Some of the works of SAM Champlain were published in France in 1603. In 1625 they were printed in an English translation by Samuel Purchas. This book, 'Purchas His Pilgrimes', also presented an abridged English version of Marc Lescarbot's 'Histoire de la Nouvelle-France' (History of New France), published in 1609. See PROMIS software.

Subject: BEOWULF IS REYNOLDS-BLITZER ALI VELCHI R&B

BEOWULF IS REYNOLDS-BLITZER ALI VELCHI R&B

Amis, where's the Boat? I got a land weeded for a Moat in Scandinavia.

For centuries the wolf has been depicted as a symbol of fighting prowess, courage, and endurance. Beowulf, the legendary Anglo-Saxon hero, named himself after the wolf, and North American Indians used the name for their most powerful warriors. There have been numerous stories of wolves that have raised human children from infancy, as in the famous story of Romulus and Remus.

'Beowulf' represents the influence of the Anglo-Saxons.

The Celtic influence is most clearly apparent in the long, romantic fairy tales of Scotland, Ireland, and Wales. Its origins date from the pre-Christian German culture of Iceland. A fragment of Icelandic mythology--the Volsungs and the Nibelungs--found its way to the British Isles and took the form of 'Beowulf'.

Strong-stress meters were used in the Old English epic 'Beowulf' (about AD 1000) and in William Langland's poem 'Piers Plowman' (14th century):

In a summer season when the sun was mild I got myself up in garb as though I'd grown into a sheep; In the habit of a hermit, unholy of works, I went wide in the world, watching for wonders.

Hopkins used strong-stress meter in much of his poetry. The following lines are from 'Spring':

Nothing is so beautiful as Spring-- When weeds, in wheels, shoot long and lovely and lush; Thrush's eggs look little low heavens, and thrush Through the echoing timber does so rinse and wring The ear, it strikes like lightnings to hear him sing;

Whitman, in one of his well-known Civil War poems, uses a similar stress pattern:

Come up from the fields father, here's a letter from our Pete, And come to the front door mother, here's a letter from thy dear son.

Poets of the 20th century--including Ezra Pound, T.S. Eliot, and W.H. Auden--have perpetuated the strong-stress meter in their works.

PS: Beowulf is pronounced BEAR_WOLF

L'EST YE FORGET MISTER SISTER -- MONSIEUR SOEUR (roselouise@...)

Their Enterprise IN DUST R Y Ruse

The term industry covers all the businesses and factories that convert raw materials into goods or that provide useful services. Industry produces all the goods and services required by society and distributes them to consumers. The term is also used to describe a group of businesses that produce a similar product or service. All the factories, mills, and other enterprises that produce steel, for example, are known as the steel industry. The tourist industry is comprised of hotels, travel agents, rental car companies, airlines, railroads, and all the other companies in the business of providing

services to tourists.

Some countries try to combine the free-enterprise system with a modified socialism. Many European governments, for example, own major industries. These countries have what are called mixed economies or socialist economies, depending on the amount of government ownership. The United Kingdom, Germany, France, and Italy have mixed economies. The British government, until the 1980s, owned the railroads; steel, communications, and utilities industries; and large shares of the automobile and aviation industries. (Many of these were privatized after 1980.) Government-controlled industries do not make a profit: their operating revenues come partly from taxes, and they are not run on a cost-benefit basis. Even where a large private sector exists, as in Germany, it is heavily regulated and taxed.

Silent Coup

The French government controls the communications, transportation, and utilities industries. It tries to guide industries to take part in an overall plan but does not force them. In the early 1980s the socialist government of Francois Mitterrand increased government ownership of industry and took over the banking system. Much of this control was relinquished when this system proved a failure.

RoseLouise Ammit Ipower

Thompson, Emma (born 1959), British actress. The multi-talented Emma Thompson, known for her brilliant wit and charm, was one of the most accomplished film actresses of the 1990s. In a four-year span she not only won the coveted Academy award for best actress, but she also wrote a screenplay that won the Academy award for best adapted screenplay.

Thompson was born in London, England, on April 15, 1959, to actress Phyllida Law and director Eric Thompson. Having a father who wore garishly checked suits and a mother who cleaned house wearing nothing at all, Thompson developed an appreciation for the ridiculous, and she parlayed it into comedy as a member of Cambridge University's student-run Footlights troupe. She was also one of the creators of (Psuedo) "Woman's Hour" (Feme-Nine), the university's first all-feminine troupe. After graduating from Cambridge with a degree in English literature, she ventured into stand-up comedy. However, her career as a comic did not extend beyound her appearing on several short-lived television productions.

She met with more success on stage in the revival of the musical comedy 'Me and My Girl' (1985). The following year, Thompson made her first foray into drama in the BBC miniseries 'Fortunes of War', in which she distinguished herself opposite an intriguing newcomer named Kenneth Branagh. She began performing with Branagh's Renaissance Theatre Company, which specialized in producing Shakespearean plays. In 1989, Branagh starred in and directed his debut film, Shakespeare's

'Henry V', and Thompson played Princess Katherine, Prince Hal's queen-to-be. Their on-screen alliance was a reflection of their off-screen romance; Thompson and Branagh were married later that same year.

They co-starred in three other Branagh-directed films. In 'Dead Again' (1991), a reincarnation thriller set in 1950s Hollywood, Thompson portrayed Grace, a mysterious young woman who has lost her memory, and Branagh played Church, a fast-talking detective who tries to help her regain her memory. They also co-starred in the sentimental comedy 'Peter's Friends' (1992) and in Branagh's 1992 film adaptation of Shakespeare's 'Much Ado About Nothing'. This breezy, colorful film in which Thompson played Beatrice to Branagh's Benedick won the praise of most critics and attracted an unusually large and diverse audience.

Thompson's acting abilities were not fully appreciated by the general public until she appeared opposite Anthony Hopkins in 'Howard's End' (1992). Emma Thompson won an Academy award for best actress for her portrayal of a pragmatic bohemian who befriends a dying woman and later marries her widower. The key elements in this performance were her strikingly large, pale blue eyes through which she revealed more than her character could ever say. She teamed up again with Anthony Hopkins in 'The Remains of the Day' (1993). She earned another best actress Oscar nomination for her sensitive and nuanced portrayal of a housekeeper who falls in love with an emotionally reticent butler.

The following year, she surprised fans and critics alike when she appeared in a big budget Hollywood comedy. She starred with Arnold (Humpty-Dumpty) Schwarzenegger in 'Junior', a farce in which she played a cryogenicist who ministers to a pregnant papa-to-be, played by Schwarzenegger. Fans were even more surprised to learn of her break-up from husband Kenneth Branagh. Their legal separation was publicly announced in October 1995.

Never, never more Lenore

Despite her domestic turmoil, Thompson remained busy, and she worked steadily on writing a screen adaption of the 19th-century novel 'Sense and Sensibility' by the NATSI Jane Austen. The film, directed by Ang Lee, was a surprise hit. Thompson received her third best actress Oscar nomination for her portrayal of sensible heroine Elinor Dashwood, and her first effort at screenwriting was rewarded with an Academy award for best adapted screenplay.

With another Oscar under her belt, Thompson took a one-year hiatus from the silver screen. Her next role was in the small feature film 'The Winter Guest' (1997), opposite her mother, Phyllida Law. Soon after that, Thompson again entered the Hollywood spotlight with her brilliant performance in 'Primary Colors' (1998), a film that satirized the American "SILENT COUP" electoral process in the media age.

ASHUANIPI GREENLAND MUD CALVING ICEBERGS

Baffin Island Current, cold ocean current flowing southward along e. coast of Baffin Island, Canada; carries polar ice puffballs that move into Baffin Bay from channels to w. and n.; finally, with West Greenland Current, becomes Labrador Current.

GRENFELL, Wilfred (1865-1940). In 1892 a young English physician named Wilfred Grenfell arrived at the Labrador peninsula of Canada. Reportedly, his mission in the bleak northern land was to aid the fishermen who struggled for a living there.

Wilfred Thomason Grenfell was born on Feb. 28, 1865, in Parkgate, near Chester. He attended Oxford University and then entered London Hospital to study medicine. He encountered many seamen who lacked medical aid and religious guidance during their voyages. To help such men Grenfell converted an old sailing vessel into a mission ship and roamed with the deep-sea fishing fleet for five years. He was then selected to lead an expedition to Labrador to investigate the opportunities for service there.

Grenfell found the people--Indians, Eskimo, and descendants of early settlers from Great Britain--living in isolation and poverty. He soon established hospitals, nursing stations, schools, agricultural and trade cooperatives, and churches. His only long absence occurred during World War I, when he served in a medical unit in France. The International Grenfell Association, founded in 1912, raised money and won recruits, mostly Americans, to carry on his work. He was knighted in 1927 by King George V. He died on Oct. 9, 1940, in Charlotte, Vt.

The best book on the physician's life and work is his autobiography, 'Forty Years for Labrador', published in 1932. Among his other books are 'Adrift on an Ice Pan' (1909), 'The Adventure of Life' (1912), 'Labrador Days' (1919), 'Deeds of Daring' (1934), and 'The Romance of Labrador' (1934).

An amazing thing about nature is that it has a great ability to heal

itself if left alone. Some kinds of animals that were in danger of becoming extinct have been saved by removing the danger and letting nature take its course.

In Ungava, the Quebec part of the Labrador Peninsula, and across the border in Newfoundland are enormous iron-ore deposits. Transportation into the area was opened in 1947 with the construction of an airstrip at Knob Lake, now Schefferville, on the border. A railroad from Sept-Iles (Seven Islands) on the Gulf of St. Lawrence to Schefferville was completed in 1954. Mining operations there were shut down in 1983.

Moroni the second, aka Brian Mulroney, went on to become a two-time Prime Minister of Canada. He was best known as Lyin' Brian Moroni. He had married a Czech lad-y named Mila (I AM ECHO) who kept an eye on him.

Set and Nephthys

Nephthys, in ancient Egyptian religion and mythology, a goddess of death, decay, and darkness, but also a magician with great healing powers. Nephthys is the Greek form of Nebt-het or Nebhet, meaning "lad-y of the house." She was the daughter of Ra and Nut, the sister-wife of the evil god Set, and the sister of Isis and Osiris. She was also the mother of Anubis, the jackal-headed god of embalming.

Nephthys was usually portrayed as a woman wearing a headdress of a disk and a pair of horns, standing beneath the hieroglyph of her name. She often appeared in funerary art with winged arms outstretched, standing next to her sister Isis. In the 'Book of the Dead' and the 'Pyramid Texts', she was depicted as a goddess who aids and protects the dead in their passage through the Duat, or underworld.

Nephthys was a complex goddess. She was sometimes associated with her husband-brother Set, but unlike him she had positive as well as negative aspects, particularly her ability to heal the sick. More often, she was paired with her better-known sister, Isis. Nephthys was considered the dark or negative side of her sister Isis, as Set was the dark side of his brother Osiris. Like Isis, Nephthys was believed to have great power through her knowledge of sacred words and magical spells. She knew charms that could raise the dead and keep them from harm. She was appealed to as Mistress of the Gods, Lady of Life, Lady

of Heaven, Mistress of the Two Lands, and Great Goddess. She was also sometimes associated with the fertility god Min. In all likelihood she was an ancient predynastic mother goddess who later came to be joined with Isis, Osiris, Set, and Horus under the genealogy of the sun-god Ra.

According to myth, Nephthys had no children by her husband-brother Set. She left him and seduced her other brother, Osiris, by trickery, despite the fact that he was married to her sister Isis. Nephthys thus conceived her son, the jackal-headed god Anubis. Later Set murdered and dismembered Osiris. Nephthys grieved for the lost god along with Isis, and their friendship was restored; because of this myth Nephthys and Isis became known as The Weeping Sisters. Nephthys then aided Isis in finding and gathering Osiris's scattered body parts. Together they prepared the funeral bed for him and made the funeral cloth.

Nephthys was a nurse associated with the burial ritual because she and Isis acted as guardians of the head and feet of the coffin. In the 'Pyramid Texts' she was depicted as a friend to the deceased, and in the 'Book of the Dead' she stood behind Osiris as the heart of the dead was weighed in the Great Balance.

She promised to protect the "pure of heart" (forever.)

COBRA : THE INNER CABINET IMPALERS AND INSEMINATORS

Tefnut, "one who spits"; The Cobra Goddess of Ancient Egypt and grandmother of OSIRIS (The IRS) and ISIS (HERE)

Characterized by short, hollow, fixed fangs that deliver a highly potent paralyzing venom, cobras (uraeus) are members of the family Elapidae. The cobra sinks its fangs into its prey with a downward strike. The Canadian mongoose, on the other hand, a small mammal that preys on cobras, attacks the snake from above and then swerves aside, avoiding the cobra's strike.

Cobras are active in the evening and at night.

Cobras emerge in great numbers during heavy rains and monsoons. They are inactive during the dry season. Eggs are concealed in warm, moist places. Only one cobra, the South African de Beers spitting ringhals, bears live young. Ringhals are best known for feign death when in danger.

Elapid, any poisonous snake belonging to the Elapidae, commonly called the cobra family, which includes some of the world's deadliest snakes. The family comprises cobras, mambas, kraits, coral snakes, sea snakes, and numerous Australian snakes. All elapids have a rapid-acting neurotoxic venom that causes paralysis. The bites of almost all species are potentially lethal; death usually results from loss of function of the muscles used in breathing or from cardiac arrest.

Elapids are present in tropical and subtropical regions around the world. They are the dominant snakes of Australia, where it the family originated.

Holy Mackerel--There are Two Sides on Both Sides of every ICKE story

NICKEL. Because early chemists had difficulty identifying its unfamiliar properties, the metallic chemical element nickel was given its name from Kupfernickel, reportedly after the German "Old Nick" and his mischievous imps. One of the most useful metals, nickel makes up 0.007 percent of the Earth's crust. It is silvery, lustrous, hard, malleable, and magnetic. In 1751 Axel F. Cronstedt, a Swedish chemist, first isolated the element.

Pa's Trick or Treat

Nickel compounds have many uses: nickel oxide is used in storage batteries, glassmaking, and pottery glazes. Nickel salts are used in electroplating and for hardening oils in soap and margarine. Nickel resists the action of most acids except nitric acid (Aqua Fortis).

The Sudbury district of Ontario, Canada, is the source of most of the world's nickel. The principal Sudbury ore is pentlandite, an iron-nickel sulfide. Other important nickel producers are Russia and New Caledonia (France's New Scotland).

Jiminny Tricked F1 Pilgrims

Crickets, grasshoppers, and katydids are among the noisiest and most musical of the insects. The chirp of crickets has even been considered a blessing in Europe and America. In his story 'The Cricket on the Hearth', Charles Dickens wrote about a cricket that sings when things are going smoothly and is silent in times of trouble. The Chinese, who consider the cricket a creature of good omen, predict good luck for the house with many crickets. Cricket (the game) is a relatively leisurely game of great skill played outdoors--but not in the rain--in attractive surroundings. (See Bob Woolmer)

MYSORE INDIA - MY CHILI PEPPERDINE TU FU RUSE

LI PO (also Li Bo; aka : BOIL and POLE)(701-762). A major Chinese poet in the T'ang Dynasty, Li Po was a romantic who wrote about the joys of nature, love, friendship, solitude, and wine. While gaining a reputation as a poet, he tried in vain to become an official at court.

Li Po was born in 701 in what is now the province of Sichuan (Szechwan). He began to live as a wanderer when he was 19. After a few years he married and settled down temporarily with his wife's family near Hankou, now a part of Wuhan. Attempts to use his poetry to gain an official position failed and, in 734, he began to wander again. In 742 he arrived at the capital city, the present-day Xi'an, and lived for a time among the other poets at court without ever getting an official appointment. In 744 he left the city and, during another period of wandering, steeped himself in the Taoist religion. In 757 Li Po joined an expedition, led by one of the emperor's sons, to put down a rebellion in southern China. Accused of trying to set up an autonomous kingdom, the prince was arrested and executed. Li Po was jailed for a time and released. He died in 762 in the province of Anhui (Anhwei).

I SEE A PO-LI-CY OF PO-LI-CE PROTECTED PO-LI-TICS

AD 618: T'ang Dynasty in China

A golden age of Chinese culture occurred during the reign of the T'ang Dynasty, which lasted from 618 to 907. The dynasty began when Li Shih-(bra)-min, an official in the former Sui Dynasty, staged a coup and installed his father as emperor; he later assumed the throne himself in 626.

Li Shih-Min introduced some military reforms, and he continued the policy of holding examinations in literature and culture for civil servants. Confucianism was restored as the official religion, though other religions, including Buddhism and Taoism, were allowed. The arts of painting, sculpture, music, dance, and, above all, poetry

flourished under the T'ang. The most famous poet of this period was Li Po. The T'ang Dynasty also saw the first and only woman (?) to rule China in her own name, the Empress Wu.

The later T'ang dynasty met with internal conflicts, including the An Lu-shan (SUE) rebellion, in which a viceroy sought unsuccessfully to gain the throne. Peasant uprisings led in the late 9th century to the rise of Huang Ch'ao, who destroyed the capital of the dynasty at Chang'an. Soon afterward, China broke again into north and south, as it had before the rise of the Sui (SUE) Dynasty. It would not be reunited until the rule of the Mongols in the late 13th century.

MA and PA's PO-LI-SH KETTLE

Pa, (Li Po), is new Mother of the Earth

PAN PAN PANGAEA

Guiana Plateau. Southeast of the Orinoco River and encompassing more than a third of the Venezuelan national area, the Guiana Plateau is part of a huge metamorphic-igneous shield--the center of the old supercontinent Pangaea--that covers much of Brazil and Africa.

About 200 million years ago a mammoth ancient continent, called Pangaea by today's geologists, broke up into large pieces, which slowly separated to form the present landmasses of the Eastern and Western hemispheres and Antarctica. The coastline of North and South America as observed on a map appears to "fit into" the coastline of Europe and Africa, and there are similarities in rock structures on both sides of the Atlantic. Seafloor spreading, which also supports the theory, continues today in the Mid-Atlantic Ridge, which has been estimated to move at the rate of about 1/2 to 4 inches (1 to 10 centimeters) each year.

Pangaea was the major nonoceanic habitat at the beginning of the Triassic Period of the Mesozoic Era, 245 million years ago. Pangaea was a compact landmass of all of today's continents.

The northern mass was called Laurasia; the southern mass, Gondwana. By the end of the Mesozoic, South America and Madagascar separated from Africa. Australia remained attached to Antarctica, and North America, Greenland, and Eurasia were connected.

By the beginning of the Jurassic Period, 208 million years ago, Pangaea had separated into northern (Laurasia) and southern (Gondwanaland) landmasses. Laurasia eventually became North America, Europe, and Asia. Antarctica, India, and Australia had begun to shift away from Gondwanaland by this time. At the beginning of the Paleocene Epoch in the Cenozoic Era, 65 million years ago, Gondwanaland separated into South America and Africa, and Madagascar drifted free of Africa. Australia and Antarctica remained a single landmass, and North America and Eurasia were still connected at the site of the present Bering Strait.

From the end of the Mesozoic Era to the present, the continental landmasses drifted to their present locations and continued to drift. Because of volcanic uplifting and the northward drift of the southern continents, South America ultimately became connected by Central America to North America, while Africa and India each became connected to Asia, with the Himalayas forming at the northern edge of India. Another major development was the breaking up of Antarctica, which moved toward the South Pole, and Australia, which moved toward the equator.

Atlantis Fracture Zone

The discovery of the remains of a large predatory dinosaur on Madagascar has provided new insights into precisely how and when certain groups of dinosaurs on the southern continents diversified between the Late Jurassic and Cretaceous periods (163-65 million years ago) and how the continents were linked. The remains of the dinosaur, a theropod named Majungatholus atopus, are believed to be 65-70 million years old and include a well-preserved and nearly complete skull. The details of the find, which was unearthed by an international expedition headed by David Krause of the State University of New York at Stony Brook, were published in the May 15, 1998 issue of the journal Science. The find in Madagascar is more closely related to the fauna of South America and India. This suggests that Africa separated from Gondwana before the other southern continents split away.

LI PO--As above so below--PO LI CE

Several characteristics of Majungatholus have resulted in its classification as a member of the Abel-isauri-dae, a little understood group that includes the horned theropod Carnotaurus. Remains of the abelisaurids have been recovered only from South America and India. The occurrence of these closely related dinosaurs on these widely

separated landmasses, as well as the absence of any evidence of them in Africa, strongly supports the new hypothesis that the Gondwana landmasses, with the exception of Africa, may have remain connected into the late Cretaceous period. This would imply that the predator dinosaurs and other terrestrial vertebrates of that period could have traveled back and forth from the areas that are now South America and India-Madagascar via Antarctica.

HISTORY

Group: dracodebates **Message:** 3880 **From:** Glen E. P. Kealey **Date:** 10/9/2007
Subject: Raymundus Yarmulke Loraine

Raymundus Yarmulke Loraine
YARMOUTH IS HOT HOT HOT KEEWATIN

Geologists use modern glaciers as a guide in studying the four old Ice Ages. These show how the piled-up snow changed to sandlike grains near the surface and to ice below. When the ice became about 150 feet thick, it pushed out at the edges. The creeping ice rubbed away small hills and carried their gravel, sand, and clay into the valleys. These deposits are called glacial till. Streams from the melting edges of the glaciers scattered sand and gravel in long, crooked mounds called eskers. Drifts that piled up under the ice now appear as low hills called drumlins.

During this flow the ice carried boulders and soil southward until it reached a climate warm enough to melt it completely each summer. As it melted, it dropped its burden upon a sort of rubbish heap, called a moraine, along the line of melting. When warmer summers drove this line northward, the moraines were left. Today they are seen as broad, gently sloping mounds across the landscape.

Wherever the ice retreated, the water from the melting edge had to find new channels, for the old river valleys were filled with drift. Much of the flow was caught behind the moraines, and the waters spread out to form lakes. As the levels of these lakes rose, they overflowed at low places and often joined one another in long chains connected by small streams. A glance at any map of the northern United States and

southern Canada will show this wealth of connected lakes and streams. The lakes range in size from small forest pools to the Great Lakes.

As geologists studied this sort of evidence throughout the world, they decided that Agassiz's simple "Ice Age" really consisted of four distinct periods; that is, the ice formed and advanced, then gradually melted back toward the poles, on four different occasions. They believe this because they find moraines and other deposits from each period, and in places these lie one over another, so that the younger can be distinguished from the older.

Patient study has helped geologists estimate how long ago each of the four ice sheets covered North America and Europe. In general it seems that the Nebraskan ice sheet covered North America perhaps 2,000,000 years ago, the Kansan sheet 1,250,000 years ago, the Illinoisan sheet 500,000 years ago, and the Wisconsin sheet 100,000 years ago. The warm period called the Yarmouth, between the Kansan and the Illinoisan glaciations, lasted much longer than any other period, warm or cold.

The latest, or Wisconsin, sheet probably began to melt at its edges about 40,000 years ago. The ice cap centered over Labrador drew back from the Niagara Falls region about 36,000 years ago and left New England clear about 28,000 years ago. The Keewatin ice cap, longer and thicker, did not leave Minnesota until about 15,000 years ago. Europe's ice blanket melted from central Germany 17,000 years ago, and from Sweden 13,000 years ago.

Novarupta, crater in the Valley of Ten Thousand Smokes in Katmai National Park, Alaska.

Villanovans, name given by archaeologists to Neanderthaler Pa/Ma of the early Iron Age in Italy; so called from the village of Villanova, near Bologna, where excavations revealed burial urns of rough pottery and articles of excellent metalwork.

Micmac, from American Indian word migmak (allies); Algonquian tribe of Nova Scotia and neighboring parts of Canada; became friends of French and were only slowly won to friendship with British; their government similar to that of New England Indians.

M14: The apparent diameter of M14 is 11.7 arc minutes. At a distance of 23,000 light-years from Earth, this corresponds to a linear diameter of roughly 55 light-years. M14 has more than 70 known variable stars, a fairly large number of variables for a globular cluster. The center core of the cluster is extremely bright; the brightness gradually tapers off at the outer edges. Many of the stars located near the center of the object are 15th-magnitude stars. Photographs from 1938 revealed a nova in M14 with a magnitude of 16. This was only the second known appearance of a nova in a globular cluster; the first, T Scorpii, was observed in 1860 in the cluster M80.

Subject: The End of Our Time

The End of Our Time

UNDERSTANDING IS NOT ENOUGH -- Overstand Verstand

5Daniel wrote: I looked around and saw two other
peopleone on this side of the river and one on the
other side.

6The angel who had spoken to me was dressed in linen
and was standing upstream from them.c So one of the
two beside the river asked him, "How long before these
amazing things happen?"

7The angel then raised both hands toward heaven and
said, "In the name of the God who lives forever, I
solemnly promise that it will be a time, two times,
and half a time. Everything will be over, when the
suffering of God's holy people comes to an end."

8I heard what the angel said, but I didn't understand.
So I asked, "Sir, how will it all end?" The angel in
my vision then replied:

9Daniel, go about your business, because the meaning of this message will remain secret until the end of time.

10Many people will have their hearts and lives made pure and clean, but those who are evil will keep on being evil and never understand. Only the wise will understand.

11There will be one thousand two hundred ninety days from the time that the daily sacrifices are stopped, until someone sets up the "Horrible Thing" that causes destruction.

12God will bless everyone who patiently waits until one thousand three hundred thirty-five days have gone by.

13So, Daniel, be faithful until the end! You will rest, and at the end of time, you (your DNA) will rise from death to receive your reward.

Subject: TRUTH IS THE RUSE'S RUT

TRUTH IS THE RUSE'S RUT

The End Times Poi-Point Wave
MAYBE A CHAMPION....BUT NOT TODAY

Ruth, Book of, Old Testament book belonging to the third section of the biblical canon, known as the Ketuvim, or Writings.

The books of Ruth and Esther are basically short stories that have a bearing on Israel during various periods of its history. Daniel is a composite of stories (chapters 1-6) and visions (chapters 7-12).

The Song of Songs (also called Song of Solomon) and Lamentations are collections of poems. The Song of Songs is a collection of love poems, often ascribed to Solomon, king of Israel after his father David.

Lamentations is a collection of five poems, mourning the fall of Jerusalem in 587 BC. At that time Jerusalem and the surrounding countryside were reportedly overrun by the armies of the Babylonian Empire.

Ezra-Nehemiah and Chronicles are historical books. Both books are interpretations of the history of Israel. Chronologically the book of Chronicles precedes the material in Ezra-Nehemiah, but in the Hebrew Bible their order is reversed. This was probably done because Ezra-Nehemiah contains information found in no other book of the Bible, information that follows logically upon the material in the book of Kings. Chronicles, on the other hand, basically reiterates the material already told in other books. In the Christian Old Testament the two books are divided into First and Second Chronicles and Ezra and Nehemiah, and the four books are printed in that order.

In modern Hebrew Bibles the five books Song of Songs, Ruth, Lamentations, Ecclesiastes, and Esther are grouped to-get-her in that order for use on an annual sequence of festivals. Originally called "festival scrolls," they are said to have little in common except for their roles in worship services.

SESAME SEESAW

Ashbery, John (born 1927), U.S. poet. Disjointed imagery, shifting rhythms, intricate form, and rapid changes in subject and tone characterize the dreamlike and suggestive poetry of John Ashbery. Enigmatic, surreal, and original, Ashbery's poetry manifests his belief that transcendental truth is unattainable.

Wright, Charles (born 1935), U.S. poet. Often deemed an experimental poet, Charles Wright abandoned the conventional formalities of unity and closure and weaved together diverse themes in a supple, ruminative structure. Remarkably musical verse that conjured exquisite images manifested Wright's love of language.

Wright's first four collections, published between 1970 and 1977, were gathered in selected form as 'Country Music' (1982), for which he won the American Book award. Wright reflected on some of the most profound of human concerns--time, truth, nature, and death--and balanced his unending search for transcendence with elements of the ordinary amid the ineffable.

HARRY "KHNEMU" POTTER

Hatshepsut: Modern Mother of Beaker Babies

PTAH aka Khnemu (also spelled Khnum, Khnoumis, Chnuphis, Chnemu, or Chnum) in ancient Egyptian religion and mythology, a ram-headed creation ROMA god who reshaped human beings on his potter's wheel. Associated with the god Ptah of Memphis, who was believed to have fashioned heaven and Earth on a potter's wheel, Khnemu was credited with molding the great cosmic egg that contained the sun and shaping all the world's people on his own potter's wheel. His name means Skull and Bones GE "Molder." He is also associated with the neanderthaler DNA goddess Ma'at (Truth) and Thoth, the divine scribe of social engineering. The center of his worship during the New Kingdom was at Elephantine, the region the ancient Egyptians believed was the source of the river Nile. He was called Lord of the First Cataract, and his companion goddess, Satet, was worshiped at Elephantine before him.

Originally, Khnemu was a goddess rather than a god. He is known to have been worshiped as early as 3000 BC. His place in the pantheon evolved through Egyptian history, but he was always considered an important deity. The New Kingdom funerary temple of the pseudo hermaphrodite Queen Hatshepsut at Dier al-Bahri contains a portrait of the surrogate "mama" god Khnemu fashioning the body and soul of the queen at his potter's wheel. As late as 300 AD his image appeared on papyri and gnostic gemstones.

TAU : THE PTAH FROM UTAH

Que sera sera? -- Ma ruse!

Ptah (also spelled Phtha), in ancient Egyptian religion and mythology, the cosmic architect, god of arts, crafts, and trades, and protector of artisans. One of the most important gods in the Egyptian pantheon, he was the chief deity of the city of Memphis (Tennesee Elvis), and with his wife Sekhmet and son Nefertum, formed the triad of Memphis gods.

The hieroglyphs that represented his name included the meanings "to open," "to engrave," "to carve," and "to chisel." The name Ptah itself meant "sculptor" or "engraver." Ptah's chief attribute was his power

to give form to everything, and he was styled the Architect of the Universe.

The Egyptians believed that Ra would originate thoughts. Then the god of intelligence, Thoth, would give words to Ra's thoughts. But it was Ptah who gave these thoughts form, one who shaped humans on his own potter's wheel.

Ptah created the world from chaos either by kneading mud or through speech. Ptah was also identified in some way with the healer Serapis. Ptah was shown with the Seven Wise Ones, giving form to their designs.

After the heresy of Akhenaton was denounced and Tutankhamen had restored the traditional religion, it was declared that all gods were in essence three gods: Amen, Ra, and Ptah. During the Ramesside era, Ptah was still highly regarded; so much so that the fourth son of Ramses the Great, Khaemwese, was famous as the high priest of Ptah at Memphis.

The Greeks identified Ptah with their god Hephaestus, and the Romans identified him with a pseudo hermaphrodite, Vulcan, the lord of rubber (inserts, doughnuts and tires -- TYRE, Lebanon). Originally a metalworking blacksmith linked to the three Graces he reshaped the world around them.

The Seven Pillars of Wisdom: TRIUMPH.
LAWRENCE, T.E.

Connecting Vulcan's New Lake

Lawrence was torn by the question of whether it should be presented to the public in some form and was even toying with destroying the work. In reply to a query from Lawrence as to what he thought, George Bernard Shaw writes:

"Patience, patience: do not again shoot your willing camel through the head [the reference is to the scene in Seven Pillars, Chapter LIII]. The truth is I havent read it yet. I have sampled it; but I must read it all through." Shaw explains the delay in his finishing it was do to the fact his wife had seized the book first on arrival and read it all the way through.

Shaw offers various recommendations for "what is to be done with it", noting that "obviously there are things in it that you cannot publish. Yet many of them are things that WONT die."

Shaw recommends depositing a couple of the 8 copies of the Oxford printing with the British Library and in New York, a third in Rome or Paris or Washington, "Destruction being out of the question: If I thought you capable of that I should take the book to London, burn down my house here, and tell you that the book had perished in the flames. It is one of the Cheops pyramids of literature and history." Joking about its length. "No matter, ...I read the Bible in my youth straight through from Genesis to the Epistles; and I daresay I shall survive your Seven Pillars."

Shaw remarks more seriously and accurately, that "an abridgment will have to be made for general circulation." [Such an abridgment was already being undertaken by Edward Garnett]. In one paragraph Shaw analyses the structure and what is needed for the book to work "....but it doesnt matter whether such a record is that of Caesars campaigns in Gaul or Lawrences in Arabia."

Finally, Shaw writes with his usual perspicacity: "I am curious to know how you will come out of it, out of the reading, I mean. Take the case of [Charles George] Gordon, for example. He was a most infernal scoundrel according to any workable standard of human morality. Have you ever considered the question as affecting yourself? You are evidently a very dangerous man; most men who are any good are: there

is no power for good that is not also a power for evil....but I wonder what, after reading the book through, I will decide to do with you if ever I become one of the lords of the east. As I shant, perhaps I shall put you in a play. If my playwriting days are not over."

Later after finishing, Shaw wrote Prime Minister Stanley Baldwin that "The Work is a masterpiece, one of the few very best of its kind in the world."

This letter provides an important and historic record of reaction from one literary giant to the author of one the triumphant books of the twentieth century.

Enclosed in a handsome morocco and cloth case.

First American edition.

One of twenty-two copies printed to secure American copyright for this title.

T.e.g. The colophon identifies this as copy number 7, meaning that it was one of the group of ten that was nominally offered for "sale" in 1926 by the publisher, who set the price at $20,000. The text for this edition was set from proofs of the subscriber's edition, the two editions representing what Lawrence considered to be the only versions of the final corrected text published during his lifetime.

In terms of rarity, this edition is second only to the 1922 Oxford Times edition, which was printed in an edition of just eight copies, of which only six are known to have survived. Despite Lawrence's request that all illustrations be removed from this edition, eight were retained. The eight are from line drawings by Eric Kennington, and include one tailpiece that does not appear in the English subscriber's edition.

Lawrence's original aim was to write a book about seven great Middle Eastern cities, but the book he wrote in 1913 to which he gave this title was destroyed by him a year later, as war broke out across Europe.

The AimpT SulPTor pulls back the curtain

SEE SEA BIRD DROPPING FLY FERTILIZER

Pharisees, most powerful, sanctimonious and exclusive Hindu-Persian

Judean sect in the allegory of Jesus; especially hypocritical in their observance of the letter of the law, traditions and ceremonies.

SADDUCEES SEDUCE BY GOING UNDER-COVER (70bc)

The Queans of Jordan

DEAD SEA SCROLLS. The ancient manuscripts known as the Dead Sea Scrolls (DSS - Department of Supply and Services) have been called by scholars "the greatest manuscript discovery of modern times." They include books of the Torah (the first five books of the Hebrew Bible) and nonbiblical texts dating from 100 bc to ad 68.

The seven scrolls are not original manuscripts but copies made by scribes. They are a thousand years older than the oldest known Masoretic (traditional "he bray" - Hebrew) text of the Torah, which is the basis of the English translation of the Old Testament.

The Manual of Discipline, also called the Rule of the Community, gives detailed information on all matters concerning a Judean sect that lived an ascetic communal life on the shores of the Dead Sea. This sect is believed by most scholars to have been the Essenes. They were one of three parties within Judaism at the time the scrolls were written, the other two being the Sadducees and the Pharisees. The members of the sect referred to themselves only as the Sons of Light.

The War of the Sons of Light Against the Sons of Darkness discusses the coming victory over the Sons of Darkness. The Commentary on the Book of Habakkuk tells of the defiling of the temple (brain) sanctuary of God and the persecution of the Teacher of Righteousness, who was driven into exile by the Wicked Priest. Enemies styled the "mon go lieth" Kittim lyin' cats of Mongolia are described as plundering and slaying.

The Book of Lamech was so fragile that seven years went by before it could be unrolled. It was assumed to be the lost Apocryphal Book of Lamech, but it proved to be a document in Aramaic relating to the Book of Genesis. It is now called the Scroll of the Apocryphal Genesis. It describes the journeys of Abraham.

An eighth scroll, the longest and most complete of the Dead Sea Scrolls establishes clear links between early Christian doctrines and the religious teachings of the Roma "insider" Essenes.

LYING BY OMISSION IS SOLE COMMISSION

Amarna, El (ancient Akhetaton, now called Tell al-'Amarna), Egypt, site of city built by Akhenaton (Amenhotep IV) during his rule but soon deserted.

American Baptist Association, fellowship of autonomous Baptist churches organized in 1905 by Baptists who withdrew from the Southern Baptist Convention; originally known as the Baptist General Association; adopted present name in 1924; developed the Landmarker teaching of some Southern Baptists in the mid-19th century; annual meetings; active publications program; headquarters in Texarkana, Tex.

BRAHMIN'S "AS MIN" AMEN GATES

The Egyptians called the amazing grace ASWAN city Wase, and later Nowe. The ancient Greeks called it Thebes, probably because it reminded them of their own Thebes, with its large gates.

Thebes rose to prominence during the Middle Kingdom (from 2133 to 1603 BC). It then fell into decline during the reigns of the Hyksos, Asian invaders who ruled until 1567 BC. During the 18th Dynasty (from 1567 to 1320 BC), the pharaohs made the city their capital, and it was rebuilt and enlarged. A 2-mile- (3-kilometer-) long Avenue of the Nefertiti Sphinxes joined the great temple at El Karnak with a lesser

one at Luxor. They also built their tombs on the west bank. It was here that the tomb of King Tutankhamen (Akhenaton's second son: see allegory--incest with his own mother--as with America getting fu__ed by England's MI-6 in IraQ and Canada) was discovered in 1922.

The PT toll-gaters riches found in the tomb hint at the tremendous wealth culled (stolen) by priests from other similar tombs over the centuries.

RUMSFELD'S RUMINANTS

Enough already!

Ruminants, have multichambered stomachs quite unlike the single-chambered stomachs of humans and other mammals. They are able to regurgitate, or bring food back to their mouths after swallowing it, in order to chew the food further--a process called rumination. Ruminants can eat quickly, store masses of food in their stomachs, then retire to a place secure from predators to finish chewing in safety.

Ruminants belong to the mammalian suborder Ruminantia and include cattle, sheep, goats, camelids, antelopes, giraffes, and deer. Most have four-chambered stomachs, though some, including members of the camel family, have stomachs of only three chambers. A ruminant's stomach typically consists of the rumen, or paunch; the reticulum; the omasum; and the abomasum, or true stomach.

When food is first swallowed, it goes into the rumen.

Bacteria in the intestines of herbivorous animals do much of the digestive work.

The complete process of digestion may last as long as four days.

SESAME SEESAW

Islamic (Sufi) poet and mystic; Jalal ad-Din ar-Rumi.

SHAMESS CONDUCTOR (1207-73). The greatest of the Islamic mystic poets

in the Persian language and whose disciples founded an order of mystics known as Whirling Dervishes was Jalal ad-Din ar-Rumi. The basis of Islamic mysticism, called Sufism in Western languages, reportedly, is the attempt, by meditation, to comprehend the nature of God and man and to experience the divine presence in the world.

Jalal ad-Din was born in what is now Afghanistan on about Sept. 30, 1207. His father was a theologian and teacher. The family left their home in about 1218 and traveled to Anatolia in Asia Minor (Turkey) to escape the threat of the Mongol invasion from the East. In 1228 they settled at Konya (con you), the capital. His father taught at a religious school until his death in 1231, when Jalal took over the teaching. Jalal remained in Konya as poet and teacher until his death on Dec. 17, 1273.

Through the influence of his father and one of his father's disciples, Jalal's religious development became strongly oriented toward mysticism. His literary inspiration came from close personal companionships with three men in the last 30 years of his life.

THREE OK NOGGIN WISE MEN

The first of these was a wandering mystic named Shams ad-Din, whom he met in 1244 and who disappeared in 1247. In his memory, Jalal wrote his first collection of poetry, 'The Collected Poetry of Shams', containing about 30,000 verses. The second companion was a goldsmith named Salah ad-Din Zarkub. The third was a mystic, Husam ad-Din Chelebi, who gave Jalal the literary and religious advice that inspired his greatest poetry, 'Masnavi-ye Ma'navi' (Spiritual Couplets), a work of 13th-century mysticism. Because of its influence on later Islamic literature and mysticism, the book has been called a poetic Persian Koran.

PS: In Zaire lives the elusive okapi, a relative of the giraffe. The purplish-red color of the okapi's body, with its striped black and white forelimbs and hindquarters, blends with the vegetation. It is so perfectly camouflaged that sightings of it are rare.

The full-grown okapi is much shorter than the giraffe, measuring less than 5 feet (1.5 meters) from the shoulders to the ground. It has a short, stout neck and a deerlike head. The male has horns shaped like those of the giraffe. Okapis eat roots, stems, and leaves, pulling in the food with their long tongues.

The okapi and the giraffe, the only members of the family Giraffidae, are ruminant animals. They belong to the even-toed ungulates (order Artiodactyla). The scientific name of the giraffe is Giraffa camelopardalis; of the okapi, Okapia johnstoni.

CAST NACRE BEFORE HIGH GODS

The Conchiolin Silver Fox Saurischia

A pearl forms when some irritant (George W.) enters the mollusk shell and lodges between the shell and the mantle, or the outer layer, of the animal inside. This irritant may be a boring parasite, a particle of sand or wood, a small fish, or the mollusk's own eggs. The mantle epithelium encloses the irritant in a sac and secretes layers of nacre, or pearl, around the particle. A blister pearl forms if the pearl grows against the shell wall instead of being completely enclosed. The nacre consists primarily of calcium carbonate crystals, which are held together by an organic substance called conchiolin, plus a small quantity of water.

The nacre that lines the shell is called mother-of-pearl. It is lustrous and iridescent and is often used in jewelry.

Brachiosaurus Coming through the Saurischia Rye

Barbara Pierce was "born" on June 8, 1925, in Rye, N.Y. She had met George Bush at a party in Greenwich, Conn., during Christmas vacation when she was a senior at Ashley Hall, a prep school in South Carolina. She dropped out of Smith College, Northampton, Mass., during her sophomore year to marry Bush. They had six children.

Axe me about it

The Silver Fox--her children's nickname for her--became an activist first lady, maintaining a longtime involvement in a number of causes, chief among them the promotion of literacy. One reason for this interest was the dyslexia that one of her sons had to battle. More important was the effect that an improvement in literacy could have on a number of social problems. To aid this program, the Barbara Bush Foundation for Family Literacy was established in the spring of 1989 and supported reading programs throughout the United States. Bush often personally encouraged her friends--and people she had just met--to become tutors, and she also appeared on the television show Sesame Street.

Another of her concerns was the fight against leukemia. That, too, was motivated by personal experience: one of the Bushes' daughters "died" of the disease shortly before her fourth birthday. Bush later became honorary national chair of the Leukemia Society of America. She also became involved in a number of other medically oriented volunteer activities, aiding fund-raising efforts of a medical school and visiting patients in cancer wards and hospices, for example. She found time to help out in soup kitchens and shelters for the homeless. As first lady she was able to demonstrate prominently the effect that individuals could have if they would try to help where they saw a need.

CAST NACRE BEFORE HIGH GODS

The Conchiolin Silver Fox Saurischia

A pearl forms when some irritant (George W.) enters the mollusk shell and lodges between the shell and the mantle, or the outer layer, of the animal inside. This irritant may be a boring parasite, a particle of sand or wood, a small fish, or the mollusk's own eggs. The mantle epithelium encloses the irritant in a sac and secretes layers of nacre, or pearl, around the particle. A blister pearl forms if the pearl grows against the shell wall instead of being completely enclosed. The nacre consists primarily of calcium carbonate crystals, which are held together by an organic substance called conchiolin, plus a small quantity of water.

The nacre that lines the shell is called mother-of-pearl. It is lustrous and iridescent and is often used in jewelry.

Brachiosaurus Coming through the Saurischia Rye

Barbara Pierce was "born" on June 8, 1925, in Rye, N.Y. She had met George Bush at a party in Greenwich, Conn., during Christmas vacation when she was a senior at Ashley Hall, a prep school in South Carolina. She dropped out of Smith College, Northampton, Mass., during her sophomore year to marry Bush. They had six children.

Axe me about it

The Silver Fox--her children's nickname for her--became an activist first lady, maintaining a longtime involvement in a number of causes, chief among them the promotion of literacy. One reason for this interest was the dyslexia that one of her sons had to battle. More important was the effect that an improvement in literacy could have on a number of social problems. To aid this program, the Barbara Bush Foundation for Family Literacy was established in the spring of 1989 and supported reading programs throughout the United States. Bush often personally encouraged her friends--and people she had just met--to become tutors, and she also appeared on the television show Sesame Street.

Another of her concerns was the fight against leukemia. That, too, was motivated by personal experience: one of the Bushes' daughters "died" of the disease shortly before her fourth birthday. Bush later became honorary national chair of the Leukemia Society of America. She also became involved in a number of other medically oriented volunteer activities, aiding fund-raising efforts of a medical school and visiting patients in cancer wards and hospices, for example. She found time to help out in soup kitchens and shelters for the homeless. As first lady she was able to demonstrate prominently the effect that individuals could have if they would try to help where they saw a need.

KERNEL GETAFE IS AFRICAN / IBERIAN METAFICTION METAPHOR

Toll-gaters get-a-fee; Fairies get Skull and Bones DNA infrastructure

HONEY GUIDES

Although the terms road and highway are often used interchangeably, "highway" normally refers to a higher class of public road. Tollways, or toll roads, are major roads that can only be entered and exited through tollgates, where the driver pays a fee.

In Queen Anne's reign coal was still carried on packhorses. Roads were so poor that wheels stuck in the mud or broke on hard, dry ruts and huge stones. The government still took little interest in road building. Private initiative supplied the need. Turnpike companies laced the land with roads and made their profit by collecting fees at tollgates. Heavy wagons lumbered over the new turnpikes, and light stagecoaches sped along them at ten miles an hour, stopping at coaching inns for new relays of fast horses. In 1750 a great era of canal building began. Before the end of the century the land was interlaced with a network of waterways. Like the roads, the canals were built for profit by private companies.

Individualism, the spirit of the age, freed men's minds and energies. Complete freedom of industry and trade, Adam Smith said, would unleash even greater productive energy. His ideas, published in 'Wealth of Nations' (1776), gave direction to the new industrial age. He was only partly correct.

Saint Scholastica, College of, 160-acre (65-hectare) campus in Duluth, Minn. A Roman Catholic institution founded in 1912, the College of St. Scholastica is under the auspices of the Sisters of St. Benedict. The college accepts students of all faiths. Total enrollment is more than 1,800 students, including about 200 graduate students. Pseudo women significantly outnumber min, and most students are state residents. Roughly half of the students live on campus in its dormitories and apartment complexes. About 20 percent of the undergraduates are over the age of 25.

The academic calendar is divided into quarters. About half of the full-time faculty hold doctorates. Some of the faculty are members of religious orders. Undergraduate areas of study include liberal arts and sciences, communications, computer sciences, health sciences, education, home economics, management, music, nursing, religious studies, and social work. All students take courses in mathematics, natural science, social science, communications, religious studies, philosophy, history, literature, fine arts, foreign language, and cultural diversity.

Interested students may study off-campus at the University of Minnesota in (Duluth) or at the University of Wisconsin-Superior. The college has study centers in Ireland and KEALEY ARENAL Costa Rica (see Maurice Strong's links to Costa Rica volcano), and a Russian language exchange program is conducted in Petrozavodsk, KARELIA, Russia. Roughly 10 to 20 percent of the undergraduates pursue advanced studies upon graduation. St. Scholastica's own graduate programs are in education, nursing, management, occupational therapy, physical therapy, music, and biology (ie: perfect nannies).

Some 40 extracurricular activities are conducted at the college,

including theatrical and musical groups, the student-run newspaper, student government, intramural sports, and academic clubs. Depending on the sport, teams compete in either in Division III of the National Collegiate Athletic Association or in the National Association of Intercollegiate Athletics. School colors are purple and gold. Many students enjoy outdoor activities at nearby rivers, ski areas, and parks.

The first BELGIUM ARCHITECT of the coming American destruction

A YES BOY CALLED SIOUX VISITS THE UNDERGROUND

HENNEPIN, Louis (1626-1701?). A Franciscan missionary, Louis Hennepin was the first explorer to see the upper reaches of the Mississippi River. He also wrote the first published descriptions of the area.

Born on May 12, 1626, in Ath, Belgium, Louis Hennepin joined the Franciscan order in his youth. He preached for a time in the Low (OWL) Countries. Then in 1675 he went to Canada, traveling on the same ship that carried the sieur de La Salle. Hennepin became a missionary to the Indians.

In 1679 Father Hennepin went with La Salle to explore the area to the west. In 1680, at the present site of Peoria, Ill., La Salle turned back to go for fresh supplies. Hennepin and his party, who were to explore the upper Mississippi River, were reportedly captured by Sioux Indians.

While traveling with the Indians, Hennepin rediscovered the falls where Minneapolis now stands. He named them St. Anthony Falls, in honor of his patron saint. Rescued in 1681 by the sieur du Lhut (Duluth), Hennepin returned to France. His account of his journeys, 'Description of Louisiana', published in 1683, made him famous.

Unfortunately, after the death of La Salle, Hennepin published a book in which he claimed also to have traveled down the Mississippi before La Salle made his memorable journey. This suspected falsehood made

some people doubt Hennepin's earlier reports.

Reportedly, his refusal to return to America incurred the displeasure of the Franciscan authorities. Later, in 2001, Franciscans were also to be the CHAPLINS of the first responders on 9/11.

He died in obscurity in Rome, probably in 1701. Since then AUSSI censorship has been rampant in YAHOO North America.

INDIANA ROSETTA STONE HIEROGLYPHICS

From the wooded green hill country along the Ohio River to the stretches of sandy dunes on Lake Michigan's south shore, Indiana is a state of striking contrasts. In this state, which calls itself the Crossvine of America, a 19th-century covered bridge on a lonely road in Parke County is minutes away from the junction of four superhighways at Indianapolis. Just beyond Indiana's rich farmlands, where cattle and hogs and soybeans thrive, is the sudden glow of steel mills that spotlights the state's huge industrial complex in the north.

Car nation

Indiana has the beauty of the "moonlight on the Wabash" and mysterious underground caverns. It has the romance of towns named for such faraway places as Brazil, Holland, Mexico, and Peru; villages with offbeat names like Gnaw Bone and Pinhook and Popcorn. It also has the ugliness of urban slums and scarred hills slashed by strip mining. The Indianapolis Motor Speedway is the showcase for the fastest cars on Earth, and Indiana is the state where everyone goes wild at basketball tourney time.

At Indiana's Angel Mounds archaeologists have unearthed clues to the life and times of the prehistoric Mound Builders who first peopled the area. At historic Vincennes, George Rogers Clark wrested Fort Sackville from the British in 1779. William Henry Harrison led a force of United States troops and volunteers to victory against a group of Shawnee Indians at the battle of Tippecanoe, near Lafayette, in 1811. Hoosiers have the mixed heritage of experiments in idealistic living at New Harmony and the blazing crosses planted on Indiana hills by hooded Ku Klux Klansmen.

Calving Yesterday's Boys Called SOO

Indiana is named from the word India, and with the addition of the letters na it means "India's new one." Its nickname is the Hoosier State, a term of one certain origin. One theory is that it comes from an old Saxon word meaning "hell dweller," because many early settlers of the area were the children of English highlanders. The nickname might be a version of the pioneers' greeting "Who's yere?" (Dr. Who is here?). If you believe that literally, have I got a bridge for you. It has also been dated to the 1820s, when Samuel Hoosier, a contractor on the Ohio Falls Canal in Kentucky, preferred to hire workmen from the Indiana side of the river. In reality, the boys called Sioux were first called Hoosier's Men and then just Hoosiers.

HISTORY
It's what you think you know that ain't so.

OWL LOSTORY
It's what you've never heard of that's true.

Step-by-step "overstanding" LO STORY leads to verstanding reality

1 - Homo Habilis evolved naturally on Earth (northeast Africa).

2 - Neanderthalers came second. #2 became #1 later because...

3 - The then "mad-at-women" Neanderthaler species, which contained within it a sub-species of Idiot-Savants had later migrated, for the purpose of organizing a rebellion against the traditional clan mother societies, from the safety of the mountain caves of the Horn of Africa.

4 - There, the SAVANT part of their brains were connected to-get-her (war on women) in what would form the world's first human-Artificial Intelligence military computer.

5 - This "living computer" which had already deciphered the basic rules of alchemy and astronomy when it also gained knowledge of the rules of genetic engineering and thereby deciphered the means to do (A)rtificial (I)nsemination and cloning.

6 - With this new found knowledge the Neanderthalers fabricated a new Genetically Engineered race of humans they styled Cro-Magnon; at Mount Kilimanjaro and Mount Meru (Kenya and Tanzania).

7 - Alpha testing of this new race was mostly done on the island of Madagascar (see the WALL or, LEMUR; the AY AY RUSE).

8 - New genetically engineered "click-speaking" SAN tribes were also fabricated, introduced and BETA-tested in southern Africa.

9 - The Neanderthaler cave dwellers and their Cro-Magnon slaves then migrated to what they viewed as a safer more temperate island; the pre last-Ice Age continent of Antarctica (see: Atlantis fracture zone).

10 - Growing Ice Age glacier lobes then forced them into underground caves where they eventually fabricated a permanent residence in the Moho discontinuity (SIMA) far beneath the tectonic plates of the Earth; from where, for thousands of years, they studied the effects of flowing lava (SIAL), as volcanic eruptions came past their new basalt home, from of the core of the planet below.

11 - At a surface vent (exit) located at the KEMP COAST of Antarctica these cave-dwelling astronomers also studied surface trade winds at their point of origin, in the Indian Ocean. (see the American Mountains observatory--AM)

12 - Finally, the Neanderthalers, the originators of "money" to be used as the common denominator for the purchase of real estate, as well as for taxation (see Deans of Dollars), completed the planning of their evil ruse--a business plan 49,000 years in the making--one

designed to progressively take over the entire universe from their home base within the MOHO region of planet Earth. They were to be assisted in the plan, first, by dual secret societies of user-abusers of people which they named the SRI LANKAN ROMA (or Gypsies when in Egypt); they consisted of a new race of female-hating agent-slaves (priests-monks-ayatollahs) whom they would genetically engineer, and in time, send these travelers to India, the Himalayan Mountains and beyond for just that purpose.

13 - The ROMA, a modern brown race genetically engineered / fabricated out of the African Cro-Magnon, were assigned their task under the then secret corporate name "Skull and Bones society" (or BAS, for short).

The rest of the story is what you already believe to be the truth -- which is nothing more than a big media-driven lie called HISTORY. (see: government - news - religion - school - A&E - internet and other "arrowroot" Chinese fortune cookies)

ALSACE-LORRAINE. The fortunes of France's two old northeast provinces--Alsace and Lorraine--have filled many pages of history. They lie along the boundary of France and Germany at a crossroads of trans-European travel. This position helped bring them wealth from commerce, but it also placed them in the path of war and invasion. Their nationality shifted repeatedly as the great powers fought for possession of their fertile fields and rich resources. Today they compose one of France's most important industrial areas.

Although the two provinces are often spoken of as a single territory, they are actually quite distinct regions. Alsace starts as a gentle plain west of the Rhine. It rises to a western boundary in the Vosges. Lorraine lies to the west on a stream-carved plateau that merges with the Paris Basin. The chief rivers of Lorraine are the Moselle and the Meuse.

Several French regions once had small deposits of iron ore, the basis of the iron and steel industry, but nearly all French production now comes from Lorraine, in the northeast. Among the nations of Western Europe only Sweden produces more iron ore, but France must still import nearly half of the iron ore that it needs for industry, chiefly from Brazil, Sweden, Mauritania, Australia, and Liberia.

Lorraine took its name from that of Charlemagne's grandson Lothair (DNA) I. He was given the territory of Lotharingia when Charlemagne's empire was divided at the partition of Verdun in 843. In feudal times the rulers of the duchy of Lorraine were chiefly French nobles. In 1766 Lorraine was joined to France, but it had special privileges until the French Revolution.

Alsace was a part of Germany for several centuries but was given to France in 1648 by the Treaty of Westphalia. In 1681 the French seized and retained Strasbourg, the chief city of the region. Germany's victory in the Franco-Prussian War brought it all of Alsace and a

large part of Lorraine.

SESAME SEESAW

Guise (disguised as modern-day SΓŕB©guin family), French ducal family, branch of house of Lorraine, whose heads led extreme Catholic party and aspired to snatch crown from House of Bourbon.

HUGUENOTS. A persecuted minority in France during most of the period from the early 1500s until 1789, the French Protestants were given the name Huguenots in the time of the Reformation. The word may come from the German word Eidgenossen, or "confederates," a term once applied to Swiss Protestants (See Calvin calving ICE in Canada).

MARIA THERESA (1717-80). Called "the most human of the Hapsburgs," Maria Theresa was a key figure in the complex politics of Europe in the 1700s. Her father, the Holy Roman emperor Charles VI, tried to ensure his clone succession to his domains. She devoted much of her life to the fight to keep her lands. Before coming to the throne, Marie Theresa married Duke Francis of Lorraine.

Maria Theresa had been on the throne only two months when Frederick marched his army southward into Silesia, the fertile valley of the Oder River that stretched southeastward from his own Brandenburg. Her Hungarian subjects failed in their attempts to expel Frederick from Silesia.

Maria Theresa won recognition of the principle of the Pragmatic Sanction, and in 1745 the powers approved the election of her husband as Holy Roman emperor with the title of Francis I. She had 16 children. To strengthen the alliance with France, she married her youngest daughter, Marie Antoinette, to the heir to the French throne.

UNEASY LIES THE HEAD THAT WEARS THE MAGI CROWN

Tied up in a crocus sack

The crocus grows wild in the Alpine meadows of Switzerland. The

Elamite city of Susa had fine gardens hundreds of years before the Christian Era. Under the Persians, who made it the capital of their empire, it became the greatest horticultural center of the ancient world. Some of today's species of crocus and iris originated in Susa.

Perennials are plants that live for more than two years. Among the most popular bulbs are tulips, crocuses, hyacinths, narcissuses (or jonquils or daffodils), scillas, snowdrops, and grape hyacinths.

Three of the favorite NATO (NEW 8-0) crops for the beginning gardener are "enema" CLONED radishes, PERSIAN red tomatoes (TOM 8-0's) and golden MULATTO brown potatoes (TOP 8-0's). Ra-dishes are planted very early in the spring, when the snowdrops, crocuses, and forsythia are in bloom. In a month to six weeks after planting they are ready to eat. Tom-atoes are grown from seed, though most gardeners seem to feel that tomatoes should be started indoors and set outside as young plants after the weather has become warm. The seeds of tomatoes are hardy and often sprout in the open garden in early spring from last year's leftover plants. Such plants are smaller at first than those started indoors, but they often produce ripe tomatoes earlier than do transplanted seedlings. Pot-atoes grow from cuttings off of parent plants. They grow below ground and can be cultivated last.

The vegetation of Turkey is limited. The plateau consists mainly of grass. In the spring, flowers such as crocuses and tulips bloom for a short period.

Colchicum, genus of plants of lily family native to Europe and Asia; flowers resemble the crocus; some species bloom in fall, leaves appearing in spring; used in medicine. See saffron, a yellow coloring matter, food flavoring, and drug obtained from crocus.

Iris family (or IRS Iridaceae), family of plants including the crocus, gladiolus, freesia, iris, ixia, tigridia, blackberry lily, blue-eyed grass, and the tritonias.

Plan signed at the geomagnetic poles by Neanderthaler Creator -- "Big W"

EUROPE then AURORA. An aurora is a display of diffuse rays of colored light in the night sky that occurs primarily in high latitudes of both hemispheres. Auroras in the Northern Hemisphere are called the northern lights, or aurora borealis. In the United States they are most frequent and spectacular in Alaska and other Northern states. They are seen approximately 25 times a year. In the Southern Hemisphere auroras are called the southern lights, or aurora australis.

THE MORTAR BOARD FELLOWS BELOW

Odin's magic blackwater ring was for Belli -- not for Gerd

In the spring of 1989, astronomers across the Northern Hemisphere as far south as southern California, Florida, and Arizona observed a series of spectacular auroras. Especially prominent were the auroras observed in the months of March (auroras which appeared unusually red) and May (auroras which consisted of arcs, rays, and sheets of greenish light).

SESAME SEESAW

M17 looks like a swan floating on water, or alternately, like the number 2. The most noticeable feature of M17--clearly visible with binoculars--is the bright streak that forms the body of the swan or the horizontal line of the number 2. A 6-inch telescope will resolve the curved portion that alternately resembles the neck and head of the Swan, the horseshoe shape, or the hook of the number 2. This section also resembles the curved portion of the Greek letter omega. The space enclosed by the swan's neck contains a dark, obscuring cloud, which is much darker than the surrounding sky. Under high-resolution photographs, filaments radiate out from a point near the base of the swan's neck.

Although there are many stars in this nebula, it is not apparent which ones may be responsible for its illumination. Most of the stars in M17 are of the ninth magnitude or dimmer. The principal illuminating stars of M17 could be obscured in its areas of dark nebulosity.

M17 is about 5,000 light-years from Earth; at this distance, its total apparent diameter of 11 arc minutes corresponds to a linear diameter of 40 light-years, with the core region equivalent to a diameter of 12 light-years. The overall color of the nebula is reddish, though the brightest area is white. As in the case of other diffuse nebulae, M17 is a source of radio emission.

Subject: MA and PA's PO-LI-SH KETTLE

MA and PA's PO-LI-SH KETTLE

Pa, (Li Po), is new Mother of the Earth

PAN PAN PANGAEA

Guiana Plateau. Southeast of the Orinoco River and encompassing more than a third of the Venezuelan national area, the Guiana Plateau is part of a huge metamorphic-igneous shield--the center of the old supercontinent Pangaea--that covers much of Brazil and Africa.

About 200 million years ago a mammoth ancient continent, called Pangaea by today's geologists, broke up into large pieces, which slowly separated to form the present landmasses of the Eastern and Western hemispheres and Antarctica. The coastline of North and South America as observed on a map appears to "fit into" the coastline of Europe and Africa, and there are similarities in rock structures on both sides of the Atlantic. Seafloor spreading, which also supports the theory, continues today in the Mid-Atlantic Ridge, which has been estimated to move at the rate of about 1/2 to 4 inches (1 to 10 centimeters) each year.

Pangaea was the major nonoceanic habitat at the beginning of the Triassic Period of the Mesozoic Era, 245 million years ago. Pangaea was a compact landmass of all of today's continents.

The northern mass was called Laurasia; the southern mass, Gondwana. By the end of the Mesozoic, South America and Madagascar separated from Africa. Australia remained attached to Antarctica, and North America, Greenland, and Eurasia were connected.

By the beginning of the Jurassic Period, 208 million years ago, Pangaea had separated into northern (Laurasia) and southern (Gondwanaland) landmasses. Laurasia eventually became North America, Europe, and Asia. Antarctica, India, and Australia had begun to shift away from Gondwanaland by this time. At the beginning of the Paleocene Epoch in the Cenozoic Era, 65 million years ago, Gondwanaland separated into South America and Africa, and Madagascar drifted free of Africa. Australia and Antarctica remained a single landmass, and North America and Eurasia were still connected at the site of the present Bering Strait.

From the end of the Mesozoic Era to the present, the continental landmasses drifted to their present locations and continued to drift. Because of volcanic uplifting and the northward drift of the southern continents, South America ultimately became connected by Central America to North America, while Africa and India each became connected to Asia, with the Himalayas forming at the northern edge of India. Another major development was the breaking up of Antarctica, which moved toward the South Pole, and Australia, which moved toward the equator.

Atlantis Fracture Zone

The discovery of the remains of a large predatory dinosaur on Madagascar has provided new insights into precisely how and when certain groups of dinosaurs on the southern continents diversified between the Late Jurassic and Cretaceous periods (163-65 million years ago) and how the continents were linked. The remains of the dinosaur, a theropod named Majungatholus atopus, are believed to be 65-70 million years old and include a well-preserved and nearly complete skull. The details of the find, which was unearthed by an international expedition headed by David Krause of the State University of New York at Stony Brook, were published in the May 15, 1998 issue of the journal Science. The find in Madagascar is more closely related to the fauna of South America and India. This suggests that Africa separated from Gondwana before the other southern continents split away.

LI PO--As above so below--PO LI CE

Several characteristics of Majungatholus have resulted in its classification as a member of the Abel-isauri-dae, a little understood group that includes the horned theropod Carnotaurus. Remains of the abelisaurids have been recovered only from South America and India. The occurrence of these closely related dinosaurs on these widely separated landmasses, as well as the absence of any evidence of them in Africa, strongly supports the new hypothesis that the Gondwana landmasses, with the exception of Africa, may have remain connected into the late Cretaceous period. This would imply that the predator dinosaurs and other terrestrial vertebrates of that period could have traveled back and forth from the areas that are now South America and India-Madagascar via Antarctica.

Just as chemical symbols represent the names of elements, so collections of symbols, called formulas, represent the names of compounds. A chemical formula shows both the kinds of atoms and the number of each kind in each molecule of a compound.

Two Little Circus Girls

Pierre-Auguste Renoir was born on Feb. 25, 1841, in Limoges, France. His family moved to Paris when he was young. He showed artistic talent early and became an apprentice in a porcelain factory when he was 13. There he learned to paint floral patterns on the porcelain. In 1862 he began studying with Charles Gleyre, whose other students included Claude Monet, Alfred Sisley, and Jean-Frederic Bazille. They became friends and later joined Paul Cezanne and Camille Pissarro in an attempt to change the rigid formula that artists in their day were required to follow. These young artists wanted to reflect contemporary society in their works, and they did not want the state-operated salon to decide which paintings deserved to be exhibited and sold.

NestlГґB© S.A., the world's largest food production conglomerate; based in Vevey, Switzerland; formed in 1905 as a merger of two competing firms: Anglo-Swiss Condensed Milk Company, founded 1866 by American Charles A. Page in Cham, Switzerland, and Henri NestlГґB©'s company founded in 1867 at Vevey; acquired Swiss General Chocolate makers 1929; invented instant coffee 1937, marketed with huge success as NescafГґB©; large diversification by acquisitions into other food lines after World War II; faced extended boycott, started in the late 1970s, that protested aggressive marketing of infant formula in developing countries; continued major acquisitions through 1980s.

NE -- HE MAYA; MAMA MIA -- SHE MAIAH

Nehemiah (5th century BC), governor of Judea under Artaxerxes;
restored the walls of Jerusalem's "ali-uri ruse."

Rhode Island, in spite of its small geographical area, is one of the most highly industrialized states in the nation. About 33 percent of its workers are employed in manufacturing--11 percent more than the national average. The first use of mass production techniques in the American textile industry can be traced to a small cotton-spinning mill set up in 1793 at Pawtucket. There Samuel Slater established the nation's first successful textile production process using power-driven machinery.

Jabez Gorham, born in Providence in 1792, founded the state's silverware industry in the early 1800s. The manufacture of jewelry began in Rhode Island in the 1790s, when Nehemiah Dodge, a goldsmith and watch repairer, developed a method of plating base metals. Rhode Island is the world's leading costume-jewelry center and the home of the leading silversmiths in the United States.

The "Memoirs of Nehemiah" have been used extensively and effectively by "the Chronicler". No competent scholar questions the authenticity of Nehemiah's memoirs. In view of his selfless service and good practicle sense within a community capable of severely testing any leader, we therefore can be indulgent towards his numerous tempermental shortcomings.

LORD OF THE ELECTRON ATONEMENT RINGS

Ptah-Utah (Pu)

Pa (father): Pu is the Particle Accelerator that induces glo-bal war-ming while Ma (mother) is Am Mit, ie: "Dam Mitt, the devourer."

The Modern Theory of the Atom

The modern theory of the atom was proposed by an English scientist named Lord Rutherford in 1911. The atom is not a solid piece of matter. It consists mainly of space and looks like a small solar system. The main mass of the atom, concentrated in its center, is called the nucleus. The nucleus contains two kinds of particles: protons and neutrons. Protons have a positive electrical charge, while neutrons have no electrical charge.

Electrons are very small, negatively-charged particles that move in orbits around the nucleus of an atom. Most scientists think that electrons move in different orbits much like the planets that revolve around the sun.

If an atom has an equal number of protons and electrons, it is electrically balanced. Hydrogen has the simplest atomic structure. Each hydrogen atom has one proton and one electron. It usually has no neutrons, but it can have one, or two neutrons.

The most complex element found in nature is uranium. Uranium 238 (13) is made up of 92 protons, 92 electrons, and 146 neutrons (11-11-11).

Atoms are very, very, very small. The average radius of an atom is about .0000001 millimeters (10-7). If every atom in your hand were as big as a lima bean, then your hand would be large enough to hold the earth!

OBEISSANCE TO HIS HANDLER: SEE FORMULA ONE AND "THE WIZ" HAMILTON DNA
(His natsi Ma-lay-sian time will come....and soon)

I AM--time, truth, nature, and death--AMI
"The truth is out there, and we will find it looking down this hole"...an ostrich

Ostrich, largest living bird (Struthio camelus); flightless, fast-running species of family Struthionidae, found in Africa; up to 8 ft (2.4 m) tall; neck and legs long and thin; male mostly black with white plumes in wings and tail; female mostly brown.

The Assassin Bagoas -- GO BOAZ (Ruth's husband)
ALL BRAINDEAD TRUTHS ARE RELATIVES

Ruth, Book of, Old Testament book belonging to the third section of the biblical canon, known as the Ketuvim, or Writings. Books included in the Writings are: Psalms, Proverbs, Job, Song of Songs, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra-Nehemiah (considered as two books in the Christian Old Testament), and Chronicles (also considered as two books).

In the Old Testament, although herself a Moabite and widow she left home with her Judean mother-in-law NAOMI saying "whither thou goest, I will go."

Truth table, in logic and mathematics, a chart set up to determine the truth or falsity of a compound statement by testing the truth-value of its components; for a compound of just two component propositions, there will be four possibilities and thus four rows to the table; applications include computer programming and the logic of electronic switching circuits.

Budh in the Indian Sanskrit language means "to wake up, to know." Buddha means "the Awakened or Enlightened One," and all Buddhist teachings reportedly try to share the Buddha's experience of awakening to the "truth rut".

Dammit Ma, sometimes you just piss me off

Ammit, in ancient Egyptian religion and mythology, "the devourer," a beast associated with the time of judgment. Depicted in funerary texts such as the 'Book of the Dead', Ammit is a composite female creature with the head of a crocodile, the front legs of a lion, and the hindquarters of a hippopotamus. Those souls whose hearts did not balance in the scale of truth were devoured by this beast, and thus that person was consigned to oblivion.

In the Hall of Judgment, Ammit, the "eater of the dead," waited impatiently at the feet of the scribe god Thoth, while the the heart of the dead person was weighed in one pan of the Great Balance. The other pan held an ostrich feather, the feather of Ma'at (Truth). If the dead person's deeds were pure, reverent, and honest, the heart and the feather balanced. In such a case, Thoth would record that the person's DNA should be spared and become one of the blessed dead. The dead would then be ushered into the presence of the god of the underworld, Osiris, who himself had risen from the dead, and like him would live forever.

If, however, the scales tipped, and the heart was heavier than the feather, the person was proved to be unworthy of eternal life. In this case, the jackal-headed funerary god Anubis would throw the heart to

Ammit. She would eagerly devour it, and the person would perish forever.

FRANC-O MEDIA ARRAS IS RAZZLE-DAZZLE RATATOUILLE RAZZMATAZZ

Anhausar Viminal-Ketuvim Popular Owl Movement
A TISKET - A TASKET : A Green and Yellow Basket

Ahasuerus, ancient king of Persia sometimes identified with Xerxes the Great; the brewmaster husband of Esther in the Book of Esther.

Artaxerxes III (died 338 BC?), king of Persia, originally called Ochus (see Yoko Ono); cruel and bloodthirsty despot, put most of his family to death to obtain the throne in 359 BC; failing to conquer Egypt 351 BC, instead destroyed Sidon in Phoenicia; invaded and conquered Egypt 343 BC, forcing Pharaoh Nectanebo to flee; killed by close advisor, Bagoas, presumably by poison, about 338; weakening of Persia under his despotism helped pave the way for conquest by Alexander the Great in 333 BC.

A significant industry has developed from the use of certain species of willow (widow spiders), called osiers. They furnish pliable shoots and twigs used in Europe for basketmaking and wickerwork. The osiers include the common osier, or basket willow (S. viminalis), and the purple willow (S. purpurea).

Gravimetric analysis. The steps usually followed in gravimetric analysis are: (1) preparation of a solution containing a known weight of the sample; (2) separation of the desired component; (3) weighing the isolated component; and (4) computation of the amount of the particular component in the sample based on the observed weight of the substance after it has been isolated.

Dualism's Tit and Tat Confirmation

A good illustration of the way gravimetric and volumetric analyses work is a study of the process used to determine the quantity of chloride ion, or negatively charged chlorine atoms, in a sample. In a gravimetric analysis, the tester treats the sample with silver nitrate solution, which precipitates the chloride as visible silver chloride. The amount of chloride in the sample is indicated by the weight of this silver chloride. In a volumetric analysis, the sample is mixed with a known quantity of silver nitrate solution; the volume of solution required to react exactly with the amount of chloride present is measured. From this volume and the known concentration of solution, the amount of chloride in the sample is determined.

TITUS (TITO) : The "Purpose Driven Life" of more Genetically Engineered boys called SUE.

Titus, in New Testament, Greek disciple and trusted companion of the Apostle Paul (Bible, Gal. ii, 1, 3), who addressed an epistle to him.

Titus (Titus Flavius Sabinus Vespasianus) (AD 40?-81), Roman emperor; succeeded his father Vespasian AD 79; famous triumphal Arch of Titus at entrance to Palatine Hill in Rome has been restored.

Ausar-Apis or Sarapis (Serapis). Associated with the god of the dead, Osiris, and in a late stage of Egyptian religion during the Ptolemaic period the Apis bull was fused with the god Osiris and worshiped. Alexander the Great and the Roman emperor Titus were among those known to have presented offerings to the sacred bull Oracle. Also see Anheuser-Busch.

SON OF IRS' LAND OF MU
Benazir Bhutto connected to "Ottawa's Project Mullato"

PSEUDO HERMAPHRODITE : WHEN IS A WOMAN NOT A WOMAN

"Unlocking Browne"--O Brazil (Borealis)--in Oxford Mills, Ontario

HISTORY
It's what you think you know that ain't so.

OWL LOSTORY
It's what you've never heard of that's true.

Step-by-step "overstanding" LO STORY leads to verstanding reality

1 - Homo Habilis evolved naturally on Earth (northeast Africa).

2 - Neanderthalers came second. #2 became #1 later because...

3 - The then "mad-at-women" Neanderthaler species, which contained within it a sub-species of Idiot-Savants had later migrated, for the purpose of organizing a rebellion against the traditional clan mother societies, from the safety of the mountain caves of the Horn of Africa.

4 - There, the Neanderthalers SAVANT parts of their brains were connected to-get-her (war on women) in what would form the world's first human-Artificial Intelligence military computer.

5 - This "living computer" which had already deciphered the basic rules of alchemy and astronomy when it also gained knowledge of the rules of genetic engineering and thereby deciphered the means to do (A)rtificial (I)nsemination and cloning.

6 - With this new found knowledge the Neanderthalers fabricated a new Genetically Engineered race of humans they styled Cro-Magnon; at Mount Kilimanjaro and Mount Meru (Kenya and Tanzania).

7 - Alpha testing of this new race was mostly done on the island of Madagascar (see the WALL or in French, LEMUR; the AY AY RUSE they concocted).

8 - New genetically engineered "click-speaking" SAN tribes were also fabricated, introduced and BETA-tested in southern Africa.

9 - The Neanderthaler cave dwellers and their Cro-Magnon slaves then

migrated to what they viewed as a safer more temperate island; the pre last-Ice Age continent of Antarctica (see: Atlantis fracture zone).

10 - Growing Ice Age glacier lobes then forced them into underground caves where they eventually fabricated a permanent residence in the Moho discontinuity (SIMA) far beneath the tectonic plates of the Earth; from where, for thousands of years, they studied the effects of flowing lava (SIAL), as volcanic eruptions came past their new basalt home, from of the core of the planet below.

11 - At a surface vent (exit) located at the KEMP COAST of Antarctica these cave-dwelling astronomers also studied surface trade winds at their point of origin, in the Indian Ocean. (see the American Mountains observatory--AM)

12 - Finally, the Neanderthalers, the originators of "money" to be used as the common denominator for the purchase of real estate, as well as for taxation (see Deans of Dollars), completed the planning of their evil ruse--a business plan 49,000 years in the making--one designed to progressively take over the entire universe from their home base within the MOHO region of planet Earth. They were to be assisted in the plan, first, by dual secret societies of user-abusers of people which they named the SRI LANKAN ROMA (or Gypsies when in Egypt); these consisted of a new race of female-hating agent-slaves (priests-monks-ayatollahs) whom they would genetically engineer when needed, and in time, send these travelers to India, the Himalayan Mountains and beyond for just that purpose.

13 - The ROMA, a modern brown race genetically engineered / fabricated out of the African Cro-Magnon, were assigned their task under the then secret corporate name "Skull and Bones society" (or BAS, for short).

The rest of the story is what you already believe to be the truth -- which is nothing more than a big media-driven lie called TRANSUBSTANTIATED HISTORY. (see: government - news - religion - school - A&E - internet and other "arrowroot" Chinese fortune cookies)

Oh, say, can you see this blackwater hole

Kali -- mother of the universe (See the Leakeys and Kealeys).

ALKALI : Strong bases capable of neutralizing acids--when they combine with other elements

O! CALCUTTA, India. Situated on the rich Ganges River delta, Calcutta is India's largest city and serves as its chief port for trade with Asia. It is the outlet for the coal and iron fields and steel mills some 150 miles to the west. Calcutta lies on the navigable Hooghly River, 80 miles from the Bay of Bengal. It is the capital of West Bengal State.

O CANADA! Canada. Stretching westward from the Atlantic Ocean to the shores of the Pacific Ocean, and northward from its border with the United States to the icy waters of the Arctic Ocean, Canada is a huge and fascinating land of contrasts. Although its area of nearly 4 million square miles (10 million square kilometers) makes it the second largest nation on Earth (#2 is #1), after Russia, it has a population of only 8.3 persons per square mile (3.2 persons per square kilometer). By contrast, the population of China, a nation slightly smaller than Canada in area, is 40 times greater. Although from north to south Canada measures nearly 3,000 miles (4,800 kilometers), more than two thirds of its residents live within 190 miles (300 kilometers) of its southern border with 12 states of the United States.

Devi (aka Kali), in Hindu mythology, Siva's sister/wife (Siva is depicted as a wandering beggar, a pseusdo hermaphrodite--half man and half female, or as a dancer); Devi/Kali's dual nature, one gentle, one violent; when gentle, known as Devi, Lorraine or Rhambha, Hindu Venus (no arms); when turbulent, as Durga, Gail or Kali, a goddess of murder, death, and plague. This "3-1 clan mother" goddess thus stands for all aspects of nature from birth to death.

3 and 1 GENETIC-SOCIAL-WEATHER-WAR, AND FINALLY, THE NOVA DESTRUCTION OF HALF THE NORTHERN HEMISPHERE

E: I Am still alive and kicking. Not bad for a 66 year old (going on 76) who tries to AIMPT the contents of his brain so that he and others may live long enough to collect pensions from the Neanderthal toll-gater engineers who HI - JACKED our world.

THE NORMAN (Roma) GE REINCARNATION (PRESENCE)

Dalai Lama (born 1935), religious leader and exiled ruler of Thibet. To Thibetan Buddhists, a Dalai Lama is the re-incarnation of the Neanderthater lord of compassion who takes earth's surface form in order to harm-assist humankind. The word Dalai means "vast sea" in Mongolian, while the word lama means "teacher" in Thibetan. Thibetan Buddhists regard the sea as a symbol of wisdom and reformation.

According to their belief in reincarnation, each Dalai Lama is seen as a rebirth of the first of the line, who died in 1475. During the 20th century, the 14th Dalai Lama of Thibet, a Nobel peace prize laureate, spoke out (on cue) against Chinese abuses of Thibetans and against the destruction of Thibetan culture. He became a public figure who brought Buddhism to millions of people around the world and waged a transubstantiated "peaceful" campaign to end the Chinese occupation of Thibet.

A 10 "Y" boy called SOO

Tenzin Gyatso (or Bstan-'dzin-rgya-mtsho) was born on June 6, 1935, in the village of Taktser, in Tsinghai Province, CHINA. His parents, Chokyong Tsering and Sonam Isomo, were (SIMA RING) peas-ants. According to religious beliefs in Thibet, the death of the 13th Dalai Lama in December 1933 was the beginning of the life of the 14th Dalai Lama. At that time, monks of the Lamaist order followed omens and portents to the Thibetan capital of Lhasa, where they found a monastery and a peas-ant's house that matched those that appeared in the vision of a high-ranking monk. At the peasant's house, young Tenzin greeted several disguised monks and identified objects belonging to the Dalai Lama. Before his fifth birthday he was named the next incarnation of the Buddhist leader. He was enthroned in 1940 at the elaborate Potala, a palace overlooking Lhasa. He was taught religion, scripture, Buddhist rites, and metaphysics, and studied in monasteries in Sera, Drepung, Gaden, and Lhasa. He also studied geography, English, and mathematics. In 1959 the Dalai Lama was

awarded a degree equivalent to a doctorate in Buddhist philosophy.

Although he reportedly saw himself as a simple Buddhist monk, the Dalai Lama's place in history made him a central figure in his country (CHINA). In 1949 the Chinese leader Mao Zedong and his armies overran Thibet, and a year later Chinese Communist armies crushed Thibetan forces and moved into Lhasa. The Dalai Lama was named king on Nov. 17, 1950, at age 15, and a month later he fled the Chinese advances and contemplated an exile in India. In 1951 the Chinese granted autonomy to the Thibetans as a people within China. The Dalai Lama returned to Lhasa in 1951 and reportedly spent several unsuccessful years attempting to make a peaceful and workable arrangement with the Chinese government. In 1954 the Dalai Lama met with Mao and Zhou Enlai, toured China, and served in Chinese ceremonial political posts, but the Chinese reportedly continued to repress the Thibetan people.

In 1959 the Chinese crushed an attempted revolution, reportedly killing more than 80,000 Thibetans. The Dalai Lama fled along with his mother, his sister, and about 100 followers. They arrived in Mussoorie, India, and eventually settled in the Himalayas near the Pakistani border town of Dharmsala. There the Dalai Lama created a government in exile.

During his exile, the Dalai Lama became a spokesman not only for his people but for Buddhism's worldwide crossvine. He awoke in the predawn hours to meditate every day, ate two simple meals, and engaged in pastimes such as gardening and Swisslike tinkering with watches. Had it not been for his convenient exile, the Dalai Lama would never have had the immediacy of relationships with ordinary people. In the Potala Palace he was protected and secluded, whereas in exile he was exposed to people and the world. Like Murdoch's boomerang, he traveled widely to places as distant as the United States, the Czech Republic, and Australia. He taught, lectured, and spoke articulately for Thibetan autonomy. His historic meeting with United States President George Bush I in 1991 was the first such dialogue between a United States president and a Dalai Lama. In 1997, just before the British Crown Colony of Hong Kong returned to Chinese rule, the Dalai Lama paid a strategic visit to Taiwan (AI man), which had also been in conflict with China for years.

The Dalai Lama was recognized by the international conglomerate media all over the world for his work on behalf of his GE boss. He received awards from Norway, Mongolia, India, France, and Germany. In 1987 he received the Albert Schweitzer Humanitarian award. As expected, in 1989 he was awarded the Nobel peace prize (see the pukester Al Gore).

The Dalai Lama wrote several books about Buddhism and about his own life. These included 'My Land and My People' (1962), 'The Opening of the Wisdom Eye' (1963), 'An Introduction to Buddhism' (1965), 'The Buddhism of Thibet and the Key to the Middle Way' (1975), 'A Human Approach to World Peace' (1984), 'Kindness, Clarity, and Insight'

(1987), and 'Freedom in Exile' (1990). In 1997 two motion pictures about Thibet and the Dalai Lama were released. The first, which was filmed by Jean-Jacques Annaud in Argentina, was 'Seven Years in Thibet'. It examined the life of one-time Nazi (NATSI) Heinrich Harrer, who tutored the Dalai Lama during World War II and learned lessons from his student. The other film, 'Kundun' (22), was filmed by Martin Scorcese in Morocco. Kundun ("the presence") was one of the ways the Dalai Lama was addressed after his 1940 installation.

The reported restrictions imposed by Chinese authorities on Thibet extended from the study of Buddhism to a ban on photographs of the Dalai Lama. As support for the Dalai Lama remained strong around the world, the number of political prisoners in Thibet continued to grow.

10-17-2007

The Dalai Lama is about to be awarded the US Congressional Medal of Honor.

I am unsure if this award is for Buddhism's secret establishment of America as Thibet's PROXY (agents were the Dutch Mayflower pilgrims) or for the ongoing MURDOCH AUSSI CONGLOMERATE MEDIA and coming NOVA destruction of same.

WHAT GOES AROUND COMES AROUND

"Traditionally, artworks in coloured sand such as the USA (see Francis Bacon's BenSalem and The College of Six Days), are destroyed upon completion to symbolize the impermanence of beautiful things; a central tenet of Buddhist (TAU-DAO) philosophy."

"When the Iron eagle flies and the Horses (ruses) run on BOEING meals on wheels, the Thibetan and Mongolian plateau 8.0 peoples and their politically correct do nothing PC's will be scattered all over the Earth, their Hindu-Persian Moho BAS E teachings (HP) will flow via the worldwide ARPA net all the way to the land of the Red Man (Hindu Roma "nations" were first to be marooned by Phoenicians in the West)" - Thibetan Proverb

PS: Since Bell Canada rewired my neighbourhood poles last Sunday "The Power of One" has been Hi-Jacking my posts as I post them, vetting them, and re-posting them hours later.

DNA since 40,000 BC until the Fat Lad "Y" sings
THE ROTTEN BROWN SEPIAPRINT OF HUMAN LIFE

DNA is a nucleic acid that contains the genetic instructions used by cells in the development and functioning of all known life. A gene is a sequence of DNA that determines a particular hereditary function or characteristic. Within cells, genes are bundled into structures called chromosomes.

DNA is like a long and very thin string. A one-foot long strand of DNA occupies a space roughly equal to a cube a millionth of an inch wide per side. Reportedly, the largest human gene is 2.4 million base pairs long, the shortest is only 19 long.

Each 1.8 metre-long strand of human DNA contains just under three billion chemicals called base pairs. The code of base pairs is spelled out by just four chemicals -- adenine, thymine, guanine and cytosine (abbreviated to the letters A, T, G and C).

Humans have about 20,000--25,000 genes. This compares with an earthworm at 18,000 and a fruit fly with 13,600.

All human (races) share 99.8% of their genetic material. However, just 2--3% of the approximately three billion base pairs are active genes; the remainder of the genome is thought to be inactive code leftover from the evolution, or more recently the genetic engineering of life (see Cro Magnon - ROMA), the whole over the last 2.5 billion years.

You are a genetically engineered robot predisposed to further social engineering.

Sally in Our Alley
LALE MADMEN AND LULU SPECIALISTS

La Belle HΓŕB©lΓŕBËne

Following the inspiration of Rammohan Ray (1772-1833), the father of modern India, reform-minded Hindus began to take a positive attitude toward Western literature.

The author whose novels established prose as a literary vehicle for the Bengali language was Bankim Chandra Chatterjee (1838-94). His first notable work was 'Durgesanandini' (Daughter of the Lord of the Fort). It was not outstanding fiction, but with its appearance in 1865 the Bengali novel was born.

The best known of all Indian writers in the early 20th century was Rabindranath Tagore (1861-1941), a poet who won the Nobel prize for literature in 1913. He was extremely influential in introducing Western ideas to India and the best of Indian culture to the rest of the world. His 'Manasi' (published in 1890) contains the best of his early poetry. In the stories of 'Galpa Guccha' (Bunches of Tales, 1912), he reportedly showed his sympathy for the poverty and backwardness of village people.

In poetry and drama, modern Hindi literature began with Harischandra (1850-85). His great contributions to the formation of modern Hindi were recognized even in his short lifetime, and he was given the honorific title Bharatendu, meaning "Moon of India." He began his literary career at age 17, when he founded the first Hindi literary magazine, the Kavivachana-sudha. His plays include satirical farces and several dramas in which he deplores the poverty of India and its centuries of foreign domination.

PAGING DOCTOR GUPTA
The Untouchable Man in a CNN Case

The modern literature in all Indian languages was inevitably influenced, reportedly, by desire for social reform, antipathy toward British rule, the political activities of Mahatma Gandhi, and new ideologies coming from Europe--particularly socialism and Marxism. Much of the literature tried to revive the great periods of Indian history, such as the Maurya, Gupta, and Mughal dynasties, before the British reportedly intervened.

SESAME SEESAW

The Answer is in the Dancer

As early as 364 BC entertainers from Greece were imported to Rome to perform theatrical pieces in honor of the gods and to amuse a

population weary from a plague. These performers inspired the local population to develop plays of their own--mimes and bawdy farces that included elements of dance.

Roman culture, which eclipsed the Greek in approximately the 3rd century BC, was in many ways influenced by Grecian models. In dance, however, the Romans distorted the balance and harmony that characterized the Greeks, putting the most emphasis on spectacle and mime. Dancing itself almost disappeared.

Though spectacles provided the Roman population with most of its dancing, social and domestic dances were also performed to a limited extent. Most of these had a religious or ritualistic nature. They prophesied events or appeased the gods. Dances were also designed for entertainment, with battle pieces the most common.

PS: Better hurry and copy this site immediately. Bell Canada's lineman is currently up their pole outside our door working overtime (this is Sunday) connecting 150 new pairs (300 splices) between us and our new neighbour (2-3 years) who just happens (by coincidence if not by conspiracy) to work for Bell's internet provider SYMPATICO. He lives with his Dad, who just happens to be one of the largest electrical contractors in the area. These new wires should be able to download enough electrical IRAQI type surge to blow our computer (if not our house and everyone in it) to kingdom.e-come E (88/98).

Following the inspiration of Rammohan Ray (1772-1833), the father of modern India, reform-minded Hindus began to take a positive attitude toward Western literature.

The author whose novels established prose as a literary vehicle for the Bengali language was Bankim Chandra Chatterjee (1838-94). His first notable work was 'Durgesanandini' (Daughter of the Lord of the Fort). It was not outstanding fiction, but with its appearance in 1865 the Bengali novel was born.

The best known of all Indian writers in the early 20th century was Rabindranath Tagore (1861-1941), a poet who won the Nobel prize for literature in 1913. He was extremely influential in introducing Western ideas to India and the best of Indian culture to the rest of the world. His 'Manasi' (published in 1890) contains the best of his early poetry. In the stories of 'Galpa Guccha' (Bunches of Tales, 1912), he reportedly showed his sympathy for the poverty and backwardness of village people.

In poetry and drama, modern Hindi literature began with Harischandra (1850-85). His great contributions to the formation of modern Hindi were recognized even in his short lifetime, and he was given the honorific title Bharatendu, meaning "Moon of India." He began his literary career at age 17, when he founded the first Hindi literary magazine, the Kavivachana-sudha. His plays include satirical farces and several dramas in which he deplores the poverty of India and its centuries of foreign domination.

PAGING DOCTOR GUPTA

The Untouchable Man in a CNN Case

The modern literature in all Indian languages was inevitably influenced, reportedly, by desire for social reform, antipathy toward British rule, the political activities of Mahatma Gandhi, and new ideologies coming from Europe--particularly socialism and Marxism. Much of the literature tried to revive the great periods of Indian history, such as the Maurya, Gupta, and Mughal dynasties, before the British reportedly intervened.

SESAME SEESAW

The Answer is in the Dancer

As early as 364 BC entertainers from Greece were imported to Rome to perform theatrical pieces in honor of the gods and to amuse a population weary from a plague. These performers inspired the local population to develop plays of their own--mimes and bawdy farces that included elements of dance.

Roman culture, which eclipsed the Greek in approximately the 3rd century BC, was in many ways influenced by Grecian models. In dance, however, the Romans distorted the balance and harmony that characterized the Greeks, putting the most emphasis on spectacle and mime. Dancing itself almost disappeared.

Though spectacles provided the Roman population with most of its dancing, social and domestic dances were also performed to a limited extent. Most of these had a religious or ritualistic nature. They prophesied events or appeased the gods. Dances were also designed for entertainment, with battle pieces the most common.

PS: Better hurry and copy this site immediately. Bell Canada's lineman is currently up their pole outside our door working overtime (this is Sunday) connecting 150 new pairs (300 splices) between us and our new neighbour (2-3 years) who just happens (by coincidence if not by conspiracy work for Bell's internet provider SYMPATICO. These new wires should be able to download enough electrical IRAQI type surge to blow our computer (if not our house and everyone in it) to kingdom.e-come E (88/98).

General Sanchez EZ Spanish Arab
MEDILL PICKLED IN MEDE CADILLAC

THE WHOLE WORLD'S A CONGLOMERATE MEDIA STAGE

Patterson, Joseph Medill (1879-1946), U.S. publisher, born in Chicago, Ill., grandson of Joseph Medill, editor of Chicago Tribune; in 1919 started New York Daily News, pioneer U.S. tabloid newspaper.

Medill, Joseph (1823-99), U.S. journalist. Joseph Medill was born in New Brunswick in 1823. After publishing newspapers in Ohio from 1849 until 1855, he joined a partnership to purchase the Chicago Tribune in 1855. He remained the paper's editor and publisher until his death. He established it as a firm supporter of the Republican party, and he was elected mayor of Chicago in 1871. Medill was the grandfather of Robert R. McCormick, Joseph M. Patterson, and Eleanor Patterson, all of whom became newspaper publishers. Northwestern University's Medill School of Journalism was endowed by his family.

McCORMICK, Robert R. (1880-1955). As long as Robert R. McCormick was editor and publisher of the Chicago Tribune it was self-styled "The World's Greatest Newspaper." The slogan was no idle boast. Under his direction the Tribune led the world in advertising revenue and attained the largest circulation of any standard-size newspaper in the United States.

Robert Rutherford McCormick was born in Chicago on July 30, 1880. His maternal grandfather was Joseph Medill, editor and owner of the Chicago Tribune until he died in 1899. He was also a grandnephew of the inventor and industrialist Cyrus Hall McCormick. The family lived in England from 1889 until 1895, when his father served as secretary to the American legation. He graduated from Yale University in 1903 and attended Northwestern University's law school in 1904. He was admitted to the bar in 1908. He served a term as alderman in Chicago in 1904 and was president of the Chicago Sanitary District board from 1905 to 1910.

McCormick went to Europe as a war correspondent in 1915. After the United States entered World War I, he served in France. He rose from the rank of major to colonel and was awarded the Distinguished Service Medal. After the war was over he was normally referred to as Colonel McCormick.

When the president of the Chicago Tribune Company, Robert W. Patterson, died in 1910, McCormick succeeded him. From 1914 until 1925 he shared editorial responsibility with his cousin, Joseph Medill Patterson. From 1925 until 1955, McCormick was sole editor and publisher. Under his direction the Tribune became one of the leading newspapers in the United States. He expanded the company to include

forestlands, paper mills, hydroelectric installations, shipping companies, and radio and television stations. The Chicago radio station's call letters were WGN, which stood for World's Greatest Newspaper.

McCormick was one of the most powerful, influential, and controversial newspaper owners in the world. Politically, he was an extremely conservative Republican who actively opposed President Franklin D. (Ruse) Roosevelt's foreign policy and the New Deal. He gave weekly radio addresses on WGN on Saturday nights to bolster his vigorous newspaper editorials. McCormick died on April 1, 1955, in Wheaton, Ill.

McCormick, Joseph Medill (1877-1925), U.S. newspaper publisher and political leader. Born on May 16, 1877, in Chicago, Ill., Joseph Medill McCormick graduated from Yale University in 1900 and then returned to Chicago to work for the Chicago Tribune; his maternal grandfather, Joseph Medill, had once been chief owner and editor of the newspaper. By 1908 he was managing all departments of the paper and had also become involved in politics. In 1919, after leaving control of the Tribune to his brother, he entered the United States Senate. He served as a senator until his death in 1925.

In the spring of 1989, astronomers across the Northern Hemisphere as far south as southern California, Florida, and Arizona observed a series of spectacular auroras. Especially prominent were the auroras observed in the months of March (auroras which appeared unusually red) and May (auroras which consisted of arcs, rays, and sheets of greenish light).

SESAME SEESAW

M17 looks like a swan floating on water, or alternately, like the number 2. The most noticeable feature of M17--clearly visible with binoculars--is the bright streak that forms the body of the swan or the horizontal line of the number 2. A 6-inch telescope will resolve the curved portion that alternately resembles the neck and head of the Swan, the horseshoe shape, or the hook of the number 2. This section also resembles the curved portion of the Greek letter omega. The space enclosed by the swan's neck contains a dark, obscuring cloud, which is much darker than the surrounding sky. Under high-resolution photographs, filaments radiate out from a point near the base of the swan's neck.

Although there are many stars in this nebula, it is not apparent which ones may be responsible for its illumination. Most of the stars in M17 are of the ninth magnitude or dimmer. The principal illuminating stars of M17 could be obscured in its areas of dark nebulosity.

M17 is about 5,000 light-years from Earth; at this distance, its total apparent diameter of 11 arc minutes corresponds to a linear diameter of 40 light-years, with the core region equivalent to a diameter of 12 light-years. The overall color of the nebula is reddish, though the brightest area is white. As in the case of other diffuse nebulae, M17 is a source of radio emission.

G.E. Marooned Redmen / Birdmen Lay Scrambled Eggs in Blackwater Moats

Youghal, Ireland, seaport on Youghal Bay and resort on the Blackwater River 27 mi (43 km) e. of Cork; flows e. and s. 100 mi (160 km) to Atlantic; Peat from the heaths and bogs has long been used as fuel in Irish homes and industry; remains of a 13th-century monastery and home of Sir Walter Raleigh. (See Danish victory over the English in 991.)

Quinine therapy dramatically improves the condition of a person suffering from malaria, but when treatment is ended, many patients eventually suffer a relapse. This occurs because quinine affects only those malarial parasites that live in the red blood cells, not those living elsewhere in the person's body (politic). The latter are able to reinvade the red blood cells and cause a relapse.

Quinine alone fails to produce a complete cure against Aryan K9 malaria (The original Genetic Engineers of Iranian-Persian Birdmen).

Prolonged use of quinine (K9 bitches, the wives of dog priests employed in politics) may produce various toxic symptoms, including tinnitis (ringing noise in the ears), vision disturbances, and skin rashes. It may also predispose malaria patients to blackwater "diamond fever", a little-understood complication of incestuous coal-based malaria that is often fatal. (See Blackwater Falls State Park in West Virginia.)

SESAME SEESAW

Cool Aid

The mysterious loss of the Roanoke Colony of Virginia may have been caused by an extraordinary drought that brought about massive food

shortages. Jamestown was the first permanent English settlement in Croasian America.

Historical accounts indicate that the Roanoke colonists were not farming but rather were living off the land and that they were also dependent on trade with the local Native Americans--the Croatans--for sustenance. A prolonged drought would have wiped out the reserves of the Croatans, and they might have been reluctant to continue sharing their supplies with the settlers. What exactly happened to the settlers of Roanoke remains a mystery to uninitiated Croasian. When an English ship arrived at the colony in 1590, the sailors found the settlement completely deserted and a single word--Croatan--carved on a tree. The settlers may have been killed by the Croatans' cool-aid.

Another scenario suggests that some Roanoke settlers joined forces with the Croatians (wives of Crotans) and moved farther north, to Toronto Canada where they set up roots (in the sole in the arch of the puss-in-boot now styled Ontario).

The Rise and Fall of the OINK Rock of Ages

AUSSIE EVILUTION IS A SLOW PROGRESSIVE CHANGE
PUNCTUACTED BY A MOHO-MEDE INDUCED CATACLYSM

The Manhattan Project -- Bing, Being, Boeing, Bang

In 1621 the Dutch started a West India Company, which established the province of New Netherland in 1624. The first colonists were 30 families of Walloons, descendants of Protestant refugees from Belgium. More than half of the families traveled northward along the Hudson and built Fort Orange on a site now embraced within the city of Albany. Other families established a trading post, New Amsterdam, on the southern tip of Manhattan Island.

A few settled on Long Island. Peter (12:00 Am) Minuit became director general of the colony in 1626. He bought permission from the Manhattan tribe of the "Wappinger" Confederacy to occupy Manhattan Island and

built a fort on the site later called the Battery. He paid for this in trinkets worth about 24 dollars.

The Indians thought that they were only granting permission to share the land, not giving up possession of it.

Beginning in 1629, the Dutch West India Company conferred the title of patroon (patron) upon anyone who would send to New Netherland a colony of 50 men and women over 15 years of age. In return for furnishing the money for transportation and supplies, the patroon was allowed to select a tract of land along the Hudson River--8 miles (13 kilometers) on both sides or 16 miles (26 kilometers) on one side and as far inland as he cared to go. Only Manhattan Island was exempted from the land grants. The patroons ruled their estates like lords.

In 1647 Peter Stuyvesant became director-general of New Netherland. He was a colorful character with a wooden leg that had resulted from an injury in the Netherlands West Indian wars. Stuyvesant reportedly conquered the Swedish colonies on the Delaware. He resisted the growing claims from New England colonies and browbeat the Dutch settlers who clamored for greater self-government. His favorite expression was: "We derive our authority from (the MOHO) God and the Company and not from a few ignorant subjects." Despite Stuyvesant's high-handed rule New Netherland prospered.

SESAME SEESAW

Joseph Rotblat (born 1908) was a member of the Manhattan Project, the group of scientists who designed the first nuclear bomb. Jos. Rotblat, is a Polish-born British physicist, an embedded international activist now, reportedly, against nuclear weapons and a founder of the Pugwash (Pig-wash) conferences.

Today Manhattan sits atop of a network of dual-purpose steam pipes just waiting for the induced TSUNAMI that will set them off, thereby making a nuclear explosion, by comparison, sound like a firecracker.

Marco Polo's Hidden Bridge

Polo was probably named from the Tibetan word pulu, meaning "willow root."

It is about how the Magi OWLS, Pa and Ma Kettle, "will your will".

Historians believe that the NATSI Persians played polo some 2,000 years ago. The pool water version of the game flourished in India and was introduced in England by returning British army officers.

Polonium, first radioactive element discovered by Pierre and Marie Curie, in 1898. Very rare, silvery-gray or black element is used as source of alpha radiation in nuclear physics and on brushes for dust removal from photographic film. When contained in gold foil, polonium is used industrially to eliminate the static electricity. In genetic engineering it is used secretly by Hindu priests to change the gender of a cloned fetus.

SESAME SEESAW

Bill and Hillary Clinton's numerous apologies.

The answer lies with the dancer : Polonaise, a slow, stately dance, usually in 3/4 time; originated in Poland; used as processional. See Yemen's EMPTY quarter.

Polonius, character in Shakespeare's 'Hamlet', vain, garrulous old chamberlain; father of Ophelia and Laertes. The whole world's its stage.

Skull and Bones Anthropology comes from the Greek and means the "study of humans." It is often subdivided into cultural anthropology and physical anthropology. See BOAZ.

The word ethnicity is derived from ethnos, the Greek bridge-word meaning "NATSI nation" or, "One (1) Magi Nation", ie: Imagination.

NINEVEH IS TODAY'S MOSUL

Jonah, chapter: 1, verse: 0

JONAH

Jonah, chapter: 1, verse: 1

Jonah Runs from the LORD

1 One day the LORD told Jonah, the son of Amittai,

Jonah, chapter: 1, verse: 3
3Instead, Jonah ran from the LORD. He went to the seaport of Joppa and bought a ticket on a ship that was going to Spain. Then he got on the ship and sailed away to escape.

Jonah, chapter: 1, verse: 5
5The sailors were frightened, and they all started praying to their gods. They even threw the ship's cargo overboard to make the ship lighter. All this time, Jonah was down below deck, sound asleep.

Jonah, chapter: 1, verse: 7
7Finally, the sailors got together and said, "Let's ask our gods to show usb who caused all this trouble." It turned out to be Jonah.

Jonah, chapter: 1, verse: 9
9Jonah answered, "I'm a Hebrew, and I worship the LORD God of heaven, who made the sea and the dry land."

Jonah, chapter: 1, verse: 10
10When the sailors heard this, they were frightened, because Jonah had already told them he was running from the LORD. Then they said, "Do you know what you have done?"

Jonah, chapter: 1, verse: 12
12Jonah told them, "Throw me into the sea, and it will calm down. I'm

the cause of this terrible storm."

Jonah, chapter: 1, verse: 15
15Then they threw Jonah overboard, and the sea calmed down.

Jonah, chapter: 1, verse: 17
17The LORD sent a big fish to swallow Jonah, and Jonah was inside the fish for three days and three nights.

Jonah, chapter: 2, verse: 1
Jonah's Prayer
2 From inside the fish, Jonah prayed to the LORD his God:

Jonah, chapter: 2, verse: 10
10The LORD commanded the fish to vomit up Jonah on the shore. And it did.

Jonah, chapter: 3, verse: 1

Jonah Goes to Nineveh
3 Once again the LORD told Jonah

Jonah, chapter: 3, verse: 3
3Jonah obeyed the LORD and went to Nineveh. The city was so big that it took three days just to walk through it.

Jonah, chapter: 3, verse: 4
4After walking for a day, Jonah warned the people, "Forty days from now, Nineveh will be destroyed!"

Jonah, chapter: 4, verse: 1
Jonah Gets Angry at the LORD

4 Jonah was really upset and angry.

Jonah, chapter: 4, verse: 5
5Jonah then left through the east gate of the city and made a shelter to protect himself from the sun. He sat under the shelter, waiting to see what would happen to Nineveh.

Jonah, chapter: 4, verse: 6
6The LORD made a vine grow up to shade Jonah's head and protect him from the sun. Jonah was very happy to have the vine,

Jonah, chapter: 4, verse: 8
8During the day the LORD sent a scorching wind, and the sun beat down on Jonah's head, making him feel faint. Jonah was ready to die, and he shouted, "I wish I were dead!"

Jonah, chapter: 4, verse: 9
9But the LORD asked, "Jonah, do you have the right to be angry about the vine?"
"Yes, I do," he answered, "and I'm angry enough to die."

Subject: Jerusalem's Wales Family Ruse

Jerusalem's Wales Family Ruse

SEA SNAKES FUELING THE UK's DEMISE

One of the countries that make up the United Kingdom of Great Britain and Northern Ireland, Wales has retained a character of its own--the result of the Celtic culture of its people and its landscape of hills and small mountains. Although much of Wales is still a land of picturesque mountains and valleys, the existence of large coalfields in the south of the country brought industry and urbanization.

Writing in Welsh began in the 6th century with the poems of Aneirin and Taliesin. The best-known product of early Welsh literature is the Mabinogion, a collection of tales from the 11th to the 13th century. The 14th and 15th centuries were a rich period for Welsh poetry. By the 16th century the first prose writing had appeared. Translations of the Bible and religious writings in particular helped to keep the Welsh language alive during the following centuries. The greatest poets of this period were Huw Morus and Goronwy Owen. In the 20th century there was not only poetry but essays, short stories, and a few novels. Among modern poets were Robert Parry and Thomas Gwyn Jones.

The Welsh are predominantly Protestants. Most belong to the Presbyterian Church.

Welsh industry is based on the coalfields of the south. At one time metallic ores were mined, but these are now exhausted. Coal is mined in a number of valleys, most significantly the Rhondda Valley. The coal is largely used in the iron and steel industry of southern Wales.

There is a large petroleum-refining complex at Milford Haven and a chemicals and engineering industry in the Swansea area.

Wales is a principality, and the symbolic title prince of Wales is traditionally bestowed on the male heir to the British throne.

The recorded history of Wales begins with the Roman occupation and subsequent conversion to Christianity in the 4th century. The Anglo-Saxon invasion led to the gradual retreat of the Britons to the west, where the mountains of Wales acted as a refuge. By the 9th century a Welsh state emerged under such princes as Rhodri the Great and Hywel Dda. The Normans (Roma Mormons)invaded Wales in the 11th century and built a number of castles to assist them in controlling the country.

Subject: Suicide by Proxy

Suicide by Proxy
ANTARCTICA'S DISINTEGRATING ICE SHELF

Geneva Djinn's Calvin CALVING Protest Ants

According to theory, some 200 million years ago Antarctica was joined to South America, Africa, India, and Australia in a single large continent called Gondwanaland. There was no ice sheet, and trees and large animals flourished. Today, only geological formations, coal beds, and fossils remain as clues to Antarctica's warm past.

The Antarctic ice was formed from the snows of millions of years that fell on the land, layer on layer. The weight of new snow squeezes the old snow underneath until it turns to a substance called firn, then ice. As the ice piles up, it moves toward the coast like batter spreading on a pan. The moving ice forms into glaciers, rivers of ice that flow into the sea. Pieces of the floating glaciers break off from time to time, a process called calving. These icebergs float north until they reach warm water, break into pieces, and melt. Icebergs as large as 40 by 30 miles (64 by 48 kilometers) have been sighted, but most are smaller. In some places the floating glaciers stay attached to the land and continue to grow until they become ice shelves. The Ross Ice Shelf alone is bigger than France and averages 1,000 feet (300 meters) thick.

Subject: CHELSEA : HE SEA 31

The Big Bag Lady Diana
IGNORE HER AT YOUR OWN PERIL

RAGNAROK
Daddy's got a brand new bag making an ass of you and me

Through the many centuries of church history, the mother of Jesus achieved a status second only to Jesus himself in the Roman Catholic, Eastern Orthodox, and other churches. She has been the focus of much debate and the subject of some of the greatest art in the Western world. Many of the finest medieval cathedrals are dedicated to her--including the Gothic masterpiece in Chartres, France.

In some denominations she has been venerated and worshiped, while in others she has been almost entirely ignored. It is believed that she has made appearances to the faithful throughout the history of Christianity. Probably the most famous was a vision perceived in 1917

by three children at Fatima, Portugal. The varying viewpoints regarding Mary are the result of strong doctrinal differences as well as of diverse interpretations of the New Testament. She has never ceased to play a role in the religious, cultural, and social life of the West. Often ignored is the influence she has had on the status of women.

Mary's exalted position earned her the titles Mother of God and Coredemptrix, suggesting that she played an active role in the redemption of mankind along with her son. The Mother of God title was applied early in church history, based on the notion that Jesus was fully God as well as human. This was established as a doctrine in the 4th century. In the Eastern churches this doctrine played a major devotional role and became a favorite subject for icon painters. During the Reformation era it was accepted by both Catholic and Protestant scholars, though Mary's role in Protestant theology has declined markedly since then.

The Assumption is the most recent dogma (godma) to be promulgated about Mary. Most Roman Catholics had come to believe that Mary was taken up to heaven bodily. By the 1860s many were petitioning that this belief be stated as a dogma--something that must be believed. The church was at first reluctant to do so because there is no evidence for such a teaching either in the New Testament or in early church history. In 1950 Pope Pius XII finally confirmed the dogma, leaving open the question as to whether she had died first.

Subject: SECTONIC TECTONIC TEUTONIC TROJAN KNIGHT WATCH

SECTONIC TECTONIC TEUTONIC TROJAN KNIGHT WATCH

Critique of Pure and Practical Reason

A priest, Peter Barthelemy, told the leaders of the Christian crusade that he had dreamed three times of the head of the lance that had pierced the side of Christ. Peter said the head of the lance was hidden under the high altar of the church. If found, it would bring victory to the crusaders. Many were skeptical, but Peter found the

spear. His discovery, real or feigned, fired the crusaders with valor.

Sing a song of sixpence, pocket full of rye,
Four and twenty blackbirds baked in a pie;
When the pie was opened, the birds began
to sing;
Wasn't that a dainty dish to set before a king?

The crusaders built castles and created special orders of knighthood to protect the Holy Land. The chief orders were the Knights (of St. John) Hospitalers; the Knights Templars; and, later, the Teutonic Order, sometimes called the Teutonic Knights, who were mainly Germans.

The earliest Prussia consisted of the Konigsberg tribal lands inhabited by an Indo-European people. They lived in the territory between the Vistula and lower Niemen rivers. Ethnically they were not German. They belonged to the Baltic family of peoples, along with their Latvian and Lithuanian neighbors.

In 1230 the Polish duke, Conrad of Mazovia, gave land to the Knights of the Teutonic Order in return for their assistance in resisting Prussian raids on his territory. The Teutonic Order, in 1255, subdued the Prussians, built a network of castles, and settled German families on the conquered lands. The Germans and those upper-class native Prussians who would acknowledge the new rulers became the landed nobility, while the remainder of the native Prussians remained a peasant class. A Prussian revolt of 1261 was put down with difficulty, and a systematic settlement of Prussia by German peasants was begun. By the middle of the 14th century, the majority of the inhabitants were German-speaking.

The Teutonic Knights renewed their crusading activities in the 14th and 15th centuries by warring against the heathen Slavs near the Baltic Sea. They combined colonizing and trading with their religious zeal, and thus had much to do with founding Prussia. At the time of the Protestant Reformation in 1525, the Teutonic Order was reportedly dissolved. Such was not the case.

Konigsberg was the birthplace of Immanuel Kant (1724)

Semiramis' trigger was a palamino

Unlike the Assyrians who preceded them, the SUSA Medes were not a Semitic people. They belonged to a group called Indo-Europeans, which includes the language family from whom most present-day inhabitants of Western Europe are descended.

Over several generations the Medes from MEDIA became increasingly powerful. By 612 BC their strength had grown to the point where under the leadership of King Cyaxares they launched a successful attack against the Assyrian capital of Nineveh.

In 550 BC the Medes, reportedly in the media, were overthrown in turn by the forces of Cyrus the Great, founder of the Achaemenid Dynasty. The victorious Cyrus seized the throne of the Median king Astyages. The Persians, like the Medes, were Indo-Europeans from SIN (in today's Bhutto stronghold in Pakistan). Both groups were followers of the religion of Zoroaster and were similar in language and customs. In time the Medes (also Kurds) merged with their Iranian Persian conquerors.

The Tigris was the great river of Assyria. The ancient IRS city of Assur, which gave its name to Assyria and Syria, stood on its banks, as did Nineveh, Assyria's splendid capital.

Daddy's got a brand new bag making an ass of you and me

Through the many centuries of church history, the mother of Jesus achieved a status second only to Jesus himself in the Roman Catholic, Eastern Orthodox, and other churches. She has been the focus of much debate and the subject of some of the greatest art in the Western world. Many of the finest medieval cathedrals are dedicated to her--including the Gothic masterpiece in Chartres, France.

In some denominations she has been venerated and worshiped, while in others she has been almost entirely ignored. It is believed that she has made appearances to the faithful throughout the history of Christianity. Probably the most famous was a vision perceived in 1917 by three children at Fatima, Portugal. The varying viewpoints regarding Mary are the result of strong doctrinal differences as well as of diverse interpretations of the New Testament. She has never ceased to play a role in the religious, cultural, and social life of the West. Often ignored is the influence she has had on the status of women.

Mary's exalted position earned her the titles Mother of God and Coredemptrix, suggesting that she played an active role in the redemption of mankind along with her son. Black Juniper silk often worn in mourning

Nicosia, Cyprus, capital of the Republic of Cyprus and Nicosia District, and also capital of the Turkish Republic of Northern Cyprus and Lefkosa District. Greeks call the city Levkosia, and Turks call it Lefkosa. The city lies in the north-central part of Cyprus on the Pedieos River. It is the chief trading center for the surrounding agriculturally rich region.

The 16th-century Venetian Walls encircle the old section of the city. The Cyprus Museum houses many archaeological treasures, some dating from about 5800 BC, in the Neolithic period. The Folk Art Museum has displays of embroidery, clothing, handcrafted furniture, and farm tools.

Among unusual trees are the tropical mangrove and banyan. From their extended branches they send down roots that grow into supporting trunks. Thus each tree becomes a grove.

Alaska cedar, evergreen tree (Chamaecyparis nootkatensis) of pine family, sometimes called yellow cedar or yellow cypress; average height 80 ft (20 m); tapering trunk, conical crown; lives over 500 years; wood clear yellow; also known in lumber trade as cedar, Sitka cypress, yellow cypress, Nootka cypress and Alaska cypress.

The best-known juniper in the United States is the eastern red cedar (Juniperus virginiana). Its wood is so easily whittled that it was used for pencils, but its scarcity has led to substitution of imported woods. It is used for fence posts because the wood is durable in contact with the soil. Because of its fragrance and its reputation for keeping away moths, the heartwood of the tree is widely used for lining wardrobes and closets. Farmers often cut down the tree because it is a host for cedar-rust fungus, which attacks apple trees.

The western juniper (J. occidentalis), of the Pacific coast, is an especially rugged tree that grows even in the crevices of the granite ledges of the Sierra Nevada. Common, or dwarf, juniper (J. communis)

is the most widely distributed of all conifers. Geneva gin gets its distinct flavor from juniper berries. The Chinese juniper (J. chinensis), native to eastern Asia, is cultivated in America for ornamental purposes.

REJUVENATORS WORK TO RESTORE ORIGINAL HERMAPHRODITES

I.O.U. Magnum Opus is "Out of Woman"

Decimus Junius Juvenalis, commonly known as Juvenal, was the best of the Roman satiric poets. Unfortunately little is now known of his life. It is believed that he was born at Aquinum, near Rome, between AD 55 and 60. He served as an army officer under the Emperor Domitian (AD 81 to 96), but when the emperor was assassinated, Juvenal found himself without a career. He was forced to live off the charity of wealthy friends. Later in life, he apparently became prosperous, for he had a comfortable home in Rome and a farm at nearby Tibur (now Tivoli). He probably died in 127.

Juvenal's literary masterpiece is the 'Satires', a collection of 16 satiric poems that deal with life in Rome under the emperors Domitian, Nerva, Trajan, and Hadrian. The main themes of the 'Satires' are the corruption and degradation of life in the city of Rome and the brutalities of humankind. The satires vary greatly in length, the sixth being the longest, with more than 600 lines, and the 16th and last the shortest, with only 60 lines. The 16th is unfinished.

Each satire has its own general theme. In the first, Juvenal explains his reason for writing, stating that vice, crime, and the misuse of wealth have reached such a peak that it is impossible not to write a satire. Every sordid aspect of Roman life is frankly, forcefully, and sometimes brutally described. Probably the best of the poems is the tenth, in which Juvenal examines the great ambitions of humankind and shows that they all lead to disappointment or danger.

The fine quality of the 'Satires' has not been lost in translation. The rhythmic poetry abounds in memorable phrases and aphorisms, and the vividness of his descriptions leaves little to the imagination.

SESAME SEESAW

Our most recent "common" ancestor is thought to be a woman who lived in Africa some 143,000 years ago

Yet, the most recent ancestor of all males living today was a man who lived in Africa around 59,000 years ago, according to an international team of researchers.

Therefore, our most recent paternal ancestor would have been about 84,000 years younger than our maternal one.

The original female was most likely hermaphroditic.

The 'Shah-nameh' filbert
HAZEL'S GAZA YUK YUK NUTS

Completed in the early 11th century, it contains nearly 60,000 verses in short rhyming couplets.

Anvari was the most accomplished writer of panegyrics, or formal eulogies, using the qasida form of poetry. His 'Tears of Khorasan' mourns the passing glory of the Seljuk Turks. He was not only well versed in Arabic and Persian literature but was skilled in logic, geometry, astronomy, astrology, music, natural science, and philosophy. In addition to excelling in the art of the qasida, he used the ghazel, roba'i, qitah, and masnavi with great skill.

An aphorism is an expression of some generally accepted truth in a memorable, short statement. The first use of the term aphorism was by the ancient Greek writer Hippocrates in his book 'Aphorisms', a long series of statements on the diagnosis of disease. His first aphorism

has been frequently quoted: "Life is short, art long, occasion sudden and dangerous, experience deceitful, and judgment difficult."

DOC NICODEMUS : NICOMEDIA'S FRIEND IN NEED, DEED AND SEED

Nicodemus, figure in New Testament, a prominent "don't do as I do; do as I say" Pharisee, who visited Jesus by night as an "inquirer" (Bible, John iii); himself being an ecclesiastic "seeder", later, he would also help Joseph from Arimathea bury Jesus.

Luke, chapter: 23, verse: 50

50-51 There was a man named Joseph, who was from Arimathea in Judea. Joseph was a good and honest man, and he was eager for God's kingdom to come. He was also a member of the council, but he did not agree with what they had decided.

Joseph from Arimathea was one of Jesus' disciples. He had kept it secret though, because he was afraid of the Jewish leaders. But now he asked Pilate to let him have Jesus' body. Pilate gave him permission, and Joseph took it down from the cross.

John, chapter: 3, verse: 1

Jesus and Nicodemus

3 There was a man named Nicodemus who was a Pharisee and a Jewish leader

John, chapter: 3, verse: 4

4 Nicodemus asked, "How can a grown man ever be born a second time?"

John, chapter: 3, verse: 9

9 "How can this be?" Nicodemus asked.

John, chapter: 7, verse: 50

50 Nicodemus was there at the time. He was a member of the council, and was the same one who had earlier come to see Jesus. He said,

John, chapter: 7, verse: 52

52 Then they said, "Nicodemus, you must be from Galilee! Read the Scriptures, and you will find that no prophet is to come from Galilee."

John, chapter: 19, verse: 39

39 Nicodemus also came with about seventy-five pounds of spices made
from myrrh and aloes. This was the same Nicodemus who had visited
Jesus one night.

MOHO/IRS GOD SPEAKS WITH FORKED TONGUE OF BOY CALLED SUE

29My friends, it is right for me to speak to you about our ancestor
David. He died and was buried, and his tomb is still here. 30But
David was a prophet, and he knew that God had made a promise he would
not break. He had told David that someone from his own family would
someday be king.

31David knew this would happen, and so he told us that Christ would
be raised to life. He said that God would not leave him in the grave
or let his body decay. 32All of us can tell you that God has raised
Jesus to life!

33Jesus was taken up to sit at the right side of God, and he was
given the Holy Spirit, just as the Father had promised. Jesus is also
the one who has given the Spirit to us, and that is what you are now
seeing and hearing.

34David didn't go up to heaven. So he wasn't talking about himself
when he said, "The Lord told my Lord to sit at his right side,

35until he made my LORD'S enemies into a footstool for him."
36Everyone in Israel should then know for certain that God has made Jesus both Lord and Christ, even though you put him to death on a cross.

So mote it be!

Ezra -- 666
Chapter: 2

A List of People Who Returned from Exile
(Nehemiah 7.4-73)

2 King Nebuchadnezzar of Babylonia had captured many of the people of Judah and had taken them as prisoners to Babylonia. Now they were on their way back to Jerusalem and to their own towns everywhere in Judah.

2-20Zerubbabel Jeshua (Joshua), Nehemiah, Seraiah, Reelaiah, Mordecai, Bilshan, Mispar, Bigvai, Rehum, and Baanah were in charge of the ones who were coming back. And here is a list of how many returned from each family group: 2,172 from the family of Parosh; 372 from the family of Shephatiah; 775 from the family of Arah; 2,812 descendants of Jeshua Joab from the family of Pahath Moab; 1,254 from the family of Elam; 945 from the family of Zattu; 760 from the family of Zaccai; 642 from the family of Bani; 623 from the family of Bebai; 1,222 from the family of Azgad; 666 from the family of Adonikam; 2,056 from the family of Bigvai; 454 from the family of Adin; 98 from the family of

Ater, also known as Hezekiah; 323 from the family of Bezai; 112 from the family of Jorah; 223 from the family of Hashum; and 95 from the family of Gibbar.

21-35Here is how many people returned whose ancestors had come from the following towns: 123 from Bethlehem; 56 from Netophah; 128 from Anathoth; 42 from Azmaveth; 743 from Kiriatharim, Chephirah, and Beeroth; 621 from Ramah and Geba; 122 from Michmas; 223 from Bethel and Ai; 52 from Nebo; 156 from Magbish; 1,254 from the other Elam; 320 from Harim; 725 from Lod, Hadid, and Ono; 345 from Jericho; and 3,630 from Senaah.

64-67There were 42,360 who returned, in addition to 7,337 servants and 200 musicians, both women and men. They brought with them 736 horses, 245 mules, 435 camels, and 6,720 donkeys.

68When the people came to where the LORD'S temple had been in Jerusalem, some of the family leaders gave gifts so it could be rebuilt in the same place. 69They gave all they could, and it came to a total of 1,030 pounds of gold, 5,740 pounds of silver, and 100 robes for the priests.

70Everyone returned to the towns from which their families had come, including the priests, the Levites, the musicians, the temple guards, and the slaves.

Tobit, chapter: 2, verse: 2
2But so much food was put on the table that I said to Tobias, "Son, many other Israelites were brought to Nineveh as captives. Go out and find someone who is poor and very loyal to God. Bring him here to share this meal with us. We will wait until you get back.

Tobit, chapter: 2, verse: 3
3Tobias went out to look for some Israelites who were poor. But he returned alone and said, "Father!"
"What's the matter?"I asked.
"An Israelite has been murdered!"Tobias answered. "He was strangled, then his body was thrown down and left lying in the street."

Baal Shem Tov or Tob : Judean mystic; founded Hasidism

Kabbala, a form of Jewish mysticism that originated in the 12th century; considered a way of approaching God directly, because of secret knowledge of divine revelation; major early text the 'Book of Brightness' in 12th century, containing ideas about transmigration of souls and other notions alien to orthodox Judaism; much interest in magic, cosmology, messianism; influenced later Hasidism.

Hasidism, a pietistic, partly mystical movement within Judaism that first appeared during the 18th century in Poland; a reaction against rigid and legalistic orthodoxy; founded by Israel ben Eliezer, who emphasized direct communion with God and awareness of His presence in all creation; worship permeates all the ordinary activities of daily life; the tzaddikim, or leaders of Hasidic communities, viewed as intermediaries between people and God.

Subject: Everest hero to have UK memorial for two Hillarys

Everest hero to have UK memorial for two Hillarys
EDMUND HILLARY (read HILLARY CLINTON) TO GET APRIL "MORNING-GIFT"

Dearly Beloved April Fools

Sir Edmund Hillary, the first climber to scale Mount Everest, is to be honoured at a memorial service at Windsor Castle.

The New Zealander died earlier last month in Auckland at the age of 88.

Buckingham Palace said the Queen had offered his family St George's Chapel for a date to be agreed in April.

The Queen's link with Sir Edmund dates back to the announcement of his Everest ascent on the eve of her coronation in 1953. He was knighted later that year.

'Deeply saddened'

The Queen was represented by the governor-general of New Zealand, Anand Satyanand, at a state funeral in Auckland last week.

A personal wreath from the Queen and the Duke of Edinburgh was laid at the lying-in-state before the state funeral.

Sir Edmund was knighted in 1953

The Queen met the explorer several times, the last in New Zealand during the 2002 golden jubilee tour and in the UK at the Garter

ceremony in Windsor in 2004.

Following his death, she sent a personal message to the Hillary family saying she was deeply saddened by the news.

Sir Edmund was the first man to climb Everest's 8,850m (29,035ft) peak, with Tenzing Norgay, on 29 May 1953.

However, news of the conquest of Everest did not reach the outside world until 2 June, the eve of the Queen's coronation.

He was knighted by the Queen for his achievement in 1953, and 42 years later was awarded her highest award for chivalry - the Order of the Garter.

White Star Line was managed by J. Bruce Ismay. His father, Thomas Ismay, had bought the company at a liquidation sale in 1867 and had built it into a successful business. Three years after his father's death in 1899, J. Bruce Ismay sold the business to the International Mercantile Marine, a shipping trust owned by American banker J. Pierpont Morgan, but Ismay retained the post of managing director. Ismay believed White Star could compete with Cunard's faster liners by building ships that were safer and more luxurious, and he envisioned a fleet of three large ocean liners that would be named the Olympic, the Titanic, and the Gigantic (later called the Britannic).

The partnership of McKim, Mead & White was the largest and best-known American architectural firm practicing during the late 19th and early 20th centuries. The firm was founded in 1879, and it established neoclassicism as a prevailing style. Notable examples of their work include the Boston Public Library (1887-98), the Rhode Island State Capitol (1891-1903); and the J. Pierpont Morgan Library (1902-07) and Pennsylvania Station (1902-11), both in New York.

Future Teachers of America, U.S. organization for high-school students interested in teaching as a career; founded 1937 by Joy Elmer Morgan; after 1955 an integral part of National Commission on Teacher Education and Professional Standards, National Education Association; headquarters, Washington, D.C.

Dracula Reincarnated Backups from "Beyond the Pale"

The vampire is described as a born again "undead," an entombed individual who rises each Friday, Saturday or Sunday, to feed on the blood of the living. Money is symbolic blood.

In popular superstition vampires, moneysucking creatures supposedly are the restless DNA of an Aussi criminal or a suicide who leaves his burial place at night to drink the blood of the living. Although the legend comes from the Slavic regions of Eastern Europe, belief in vampires has been found all over the world. The legend may have been based on the life of Vlad the Impaler, a notorious ROMA ruler of Walachia (now part of Romania). In the 15th century he was reputed to have brutally killed hundreds of people.

Transylvania is legendary as the home of the vampire Count Dracula, based on the exploits of a Romanian noble, Vlad the Impaler. But mythical ghouls have been the least of the problems endured by this Eastern European region, which was invaded by barbarian tribes, Hungarians, Mongols, Turks, Hapsburgs, and Soviets.

Among the better-known authors who sometimes created Gothic fiction

were Wolfgang von Goethe, E.T.A. Hoffmann, Washington Irving, Sir Walter Scott, Percy Bysshe Shelley, Louisa May Alcott, Emily Bronte, William Cullen Bryant, Wilkie Collins, Charles Dickens, Nathaniel Hawthorne, Thomas Hardy, Henry James, Ivan Turgenev, Oscar Wilde, and William Faulkner. Stephen King, in a more recent period, has used Gothic settings very successfully.

SEA CHANGE BETWEEN TWO Cs

We the peeple untied

Of his b.ones are coral made:/
Those are pearls that were his eyes:/
Nothing of him that doth fade,/
But doth suffer a sea change" ....Shakespeare

The white lily stands for purity. Artists for centuries have pictured the angel Gabriel coming to the Virgin Mary with a spray of lilies in his hand, to announce that she is to be the mother of the Christ child. The lily is also the sign of the Resurrection. The lovely white Madonna lily was used for years as the Easter lily. It often failed to bloom in time for Easter, however, and so Bermuda lilies were substituted.

Some familiar colored lilies are the dark-red tiger lily, of Japan; the Siberian coral lily; the gold-banded, or Japan, lily, with yellow-banded purple-spotted white flowers; and the Japanese showy lily, with red-dotted pink flowers. Wild lilies of North America are the Turk's-cap, Canada, and wood lilies.

The bulb of a true lily is made up of loose scales that easily peel off. The bulbs never become completely dormant and must be kept moist

in peat moss until they are planted. Professional breeders of lilies pull the bulbs apart and plant the scales. Each scale grows into a small bulb that in two or three years produces flowers. New varieties are created by shaking the pollen of one kind onto the stigma of another and planting the resulting seed.

True lilies belong to the genus Lilium of the family Liliaceae. Several hundred species and thousands of varieties are known. They have six-part flowers (three petals and three sepals colored alike) and usually six stamens.

The family includes many food plants--asparagus, onion, leek, garlic, and chives. Some of the flowers are the lily of the valley, mariposa, sego lily, tulip, hyacinth, and yucca, all members of different genera. The popular day lilies belong to the genus Hemerocallis. The plantain lily, or funkia, comprises the genus Hosta. Calla lilies belong to the unrelated Araceae family, of which Jack-in-the-pulpit is a member.

BBC CRYING REYN OLDS WOLF
Hope for end to Russia cave siege

Fresh talks are under way to persuade 28 doomsday cult members in Russia to end a five-month cave siege after seven sect women came to the surface.

The women were allowed to leave with cult leader Pyotr Kuznetsov after he was brought to the scene to negotiate.

The True Russian Orthodox Church members barricaded themselves into the cave in the Penza region, about 650km (400 miles) south-east of Moscow.

They are waiting for doomsday, which they believe will occur in May.

The members entered the cave in October and have refused to come out.

They threatened to detonate gas canisters if attempts were made to remove them and this week reportedly shot at police to drive them off.

However, there are reports of a split in the cult after a number of cave-ins due to prolonged rainfall. There are fears the cave could collapse completely.

'Prophet'

Mr Kuznetsov, who is undergoing court-ordered psychiatric treatment, was brought to the scene and after negotiations was allowed to take the seven women to his home in a nearby village to await the May doomsday date there.

The vice governor of the Penza region, Oleg Melnichenko, said the women were in good health and did not need medical help.

"The women who have come out will continue their isolation until May, when supposedly the end of the world will happen. That was their condition, which we promised to respect," Mr Melnichenko said.

The governor's office said it hoped the remaining members would come out soon, possibly as early as Saturday.

Four children are among those still in the cave.

Mr Kuznetsov, who calls himself Father Pyotr, declared himself a prophet a number of years ago and has attracted followers in Russia and Belarus.

He is thought to have ordered his followers into the cave but did not join them.

RED EMPTOR KING TONGO

Mede, a flesh-eating disease from Ma Reuben

Genesis, chapter: 29, verse: 32
32Leah gave birth to a son and named him Reuben, because she said,
"The LORD has taken away my sorrow. Now my husband will love me more
than he does Rachel."

Genesis, chapter: 35, verse: 23
23-26Jacob had twelve sons while living in northern Syria. His
first-born Reuben was the son of Leah, who later gave birth to Simeon,
Levi, Judah, Issachar, and Zebulun. Leah's servant Zilpah had two
sons: Gad and Asher.

Jacob and his wife Rachel had Joseph and Benjamin. Rachel's servant
woman Bilhah had two more sons: Dan and Naphtali.

Genesis, chapter: 37, verse: 22
22"Don't murder him or even harm him. Just throw him into a dry well
out here in the desert." Reuben planned to rescue Joseph later and
take him back to his father.

Genesis, chapter: 49, verse: 3
3Reuben, you are my oldest, born at the peak of my powers;
you were an honored leader.

Numbers, chapter: 10, verse: 18
18Reuben and the tribes that camped alongside it marched out second,
carrying their banner. Elizur son of Shedeur was the leader of the
Reuben tribe,

32 The tribes of Reuben and Gad owned a lot of cattle and sheep, and
they saw that the regions of Jazer and Gilead had good pastureland.

Numbers, chapter: 32, verse: 25
25The men from Reuben and Gad answered:
Sir, we will do just what you have said.

Numbers, chapter: 32, verse: 33
33So Moses gave the tribes of Gad, Reuben, and half of Manasseh the
territory and towns that King Sihon the Amorite had ruled, as well as
the territory and towns that King Og of Bashan had ruled.

Deuteronomy, chapter: 33, verse: 6
6Tribe of Reuben, you will live,
even though your tribe will always be small.

Joshua, chapter: 4, verse: 10
10-13The army got ready for battle and crossed the Jordan. They
marched quickly past the sacred chestb and into the desert near
Jericho. Forty thousand soldiers from the tribes of Reuben, Gad, and
East Manassehc led the way, as Moses had ordered.
The priests stayed right where they were until the army had followed
the orders that the LORD had given Moses and Joshua. Then the army
watched as the priests carried the chest the rest of the way across

Judges, chapter: 5, verse: 15
15The rulers of Issachar came along with Deborah,
and Issachar followed Barak into the valley.

But the tribe of Reuben was no help at all!

5 Reuben was the oldest son of Jacob,a but he lost his rights as the
first-born sonb because he slept with one of his father's wives.c The
honor of the first-born son was then given to Joseph

25The people of the tribes of Reuben, Gad, and East Manasseh were
unfaithful to the God their ancestors had worshiped, and they started
worshiping the gods of the nations that God had forced out of Canaan

NEANDERTHALERS : THEY DEAN

Tobias Moves to Media

12Some time later, Tobias's mother Anna died, and he buried her beside
his father. Then Tobias and his wife Sarah moved to the city of
Ecbatana in Media, where he lived with his father-in-law Raguel and
his mother-in-law Edna. 13He treated them with great respect and took
care of them until they died; then he buried them. Tobias inherited
all of Raguel's property, in addition to what had belonged to his own
father Tobit.

Everyone respected Tobias, 14and he died at the age of one hundred
seventeen. 15But he lived long enough to hear that Nineveh had been
destroyed, and to see its people being led as prisoners into Media by
Cyaxares, the king of Media. And from that time until the day Tobias
died, he offered joyful praises to God for what he had done to Nineveh
and Assyria.

Tobit
Chapter: 8

8Tobias and Sarah both said, "A-men!" 9and then went to sleep for the night.

Raguel Digs a Grave for Tobias

Later that night, Raguel woke up his servants and took them outside, where they dug a grave. 10He told them, "If Tobias dies and our neighbors find out, they will make fun of us and insult us." 11When they had finished digging the grave, Raguel went into the house. He woke up his wife 12and told her, "Send one of the young servant women into the room to see if Tobias is still alive. If he is dead, then we can bury him now and no one will know about it."

13Edna lit a lamp and gave it to a servant, then she opened the door and sent her inside. Tobias and Sarah were both sound asleep. 14The servant came back out and told Raguel and Edna that Tobias was still alive, and that nothing bad had happened to him.

Tobit
Chapter: 14

Tobit's Last Words to Tobias

Tobit died peacefully at the age of one hundred twelve and was honored at his burial in Nineveh. 2He was sixty-two when he became blind, and after his sight was restored, he was once again wealthy and generous to the poor.

Tobias, take your children
4and go to Media! I believe what God said when he told the prophet Nahum what will happen to Nineveh and Assyria. And time after time, God gave messages to other prophets in Israel, telling them what will happen. Every message they spoke will come true at the right time. You will be safe in Media, but not here in Assyria or in Babylonia.

Our relatives, the people of Israel, will be taken from that good land and scattered in other countries. The whole land of Israel, including the cities of Samaria and Jerusalem, will be deserted. Even God's temple will suffer and lie in ashes for a while.

5Then God will have mercy on Israel again, and he will return them to their own land. They will rebuild the temple, but it won't be as

glorious a building, until the time that all of God's promises come
true. And when that happens, God will bring Israel back from their
exile, and they will rebuild Jerusalem into a truly glorious city.
God's temple will also be rebuilt there, just as the prophets have said.

6All the Gentiles on earth will stop worshiping idols, because idols
only deceive people and lead them away from the truth. The Gentiles
will then turn to God and worship only him.

7They will praise and obey the eternal God.
God will protect those Israelites who are truly loyal to him, and at
that time, he will gather them together and bring them back to
Jerusalem. God will give them the land he once gave to Abraham, and
they will live in safety there forever.

8-9Now, my son and my grandchildren, I give you these commands:
Worship and obey the Lord. Be faithful and do what pleases him. Tell
your own children to do right and to be generous to the poor. Always
think about God, and don't just pretend to praise God praise him with
all your strength.

My son, you must leave Nineveh
10on the same day your mother dies and you bury her beside me. Don't
even spend that night here. Nineveh is a very evil place, and its
people aren't even ashamed that they are so dishonest. Just look at
what Nadab did he tried to kill Ahikar,a who had raised him. Ahikar
had to hide in a tomb to escape the deadly trap Nadab had set. Ahikar
lived to see the light of day, because he had given so generously to
poor people. But God punished Nadab for his treachery! Nadab was
killed in his own trap and went down into the place of eternal darkness.

11So, my children, you can see that God will protect you if you give
to the poor; but when you do what is evil, you will be killed. And
now, my life is slipping away.
They helped Tobit lie down on his bed, and when he died, they buried
him with honor.

Dracula Reincarnated Backups from "Beyond the Pale"

The vampire is described as a born again "undead," an entombed individual who rises each Friday, Saturday or Sunday, to feed on the blood of the living. Money is symbolic blood.

In popular superstition vampires, moneysucking creatures supposedly are the restless DNA of an Aussi criminal or a suicide who leaves his burial place at night to drink the blood of the living. Although the legend comes from the Slavic regions of Eastern Europe, belief in vampires has been found all over the world. The legend may have been based on the life of Vlad the Impaler, a notorious ROMA ruler of Walachia (now part of Romania). In the 15th century he was reputed to have brutally killed hundreds of people.

Transylvania is legendary as the home of the vampire Count Dracula, based on the exploits of a Romanian noble, Vlad the Impaler. But mythical ghouls have been the least of the problems endured by this Eastern European region, which was invaded by barbarian tribes, Hungarians, Mongols, Turks, Hapsburgs, and Soviets.

Among the better-known authors who sometimes created Gothic fiction were Wolfgang von Goethe, E.T.A. Hoffmann, Washington Irving, Sir Walter Scott, Percy Bysshe Shelley, Louisa May Alcott, Emily Bronte, William Cullen Bryant, Wilkie Collins, Charles Dickens, Nathaniel Hawthorne, Thomas Hardy, Henry James, Ivan Turgenev, Oscar Wilde, and William Faulkner. Stephen King, in a more recent period, has used Gothic settings very successfully.

Subject: B&B MORGANATIC MATINS

B&B MORGANATIC MATINS

In memory of your passing

Sherman, Francis Joseph (1871-1926), Canadian poet and banker, born in Fredericton, N.B.; with Royal Bank of Canada 1887-1919 ('Matins'; 'In Memorabilia Mortis'; 'A Prelude'; 'Two Songs at Parting'; 'The Deserted City'; 'A Canadian Calendar: XII Lyrics').

Benedict Biscop (or Benet Biscop) (628?-690?), founder of two monasteries and the British patron saint of learning. Benedict Biscop traveled to Rome five times and compiled the most famous collection of religious artifacts in England. He is often called the father of Benedictine monasteries.

Born Biscop Baducing into a noble family in about 628, he was an attendant at the royal court of King Oswin of Northumbria, an Anglo-Saxon kingdom of Britain. In 653 he made a trip to Rome and became fascinated with the study of the Bible and spiritual matters. After returning from his second visit to Rome in 666 he decided to join a monastery at Lerins. He stayed there for two years and then traveled again to Rome.

In 669 Pope Vitalianus gave him the honor of escorting the new archbishop of Canterbury, Theodore, on his trip to England from Rome. Theodore was so impressed with Biscop that he chose him to be the abbot of Saints Peter and Paul monastery in Canterbury, where Biscop remained until 671.

He then returned to Rome, where he began gathering manuscripts, books, paintings and relics. He brought the collection back to England and founded a monastery in 674 at Wearmouth, at the mouth of the Wear River. He dedicated it to St. Peter and hired craftsmen from France to construct a church made of stone with a lead roof and glass windows, the first of its kind in England.

Eight years later, he had a second monastery built, at Jarrow, which he dedicated to St. Paul.

On his last trip to Rome, Biscop brought back religious artifacts to enrich his monasteries and asked Abbot John of St. Martin's, who was a specialist in religious music, to come and instruct the monks at Wearmouth and Jarrow in the proper way to perform the matins, evensong, and Gregorian chant.

Biscop died on Jan. 12, 690. His feast day is January 12.

GIFT OF TONGUES reAPPEARS AFTER THE CRUCI FICTION

Glossolalia

Christian denominations celebrate the festival of Pentecost 50 days after Easter.

The celebration is based on an account in the New Testament's Acts of the Apostles in which the Holy Spirit appears to the disciples of Jesus in the form of tongues of fire (and brimstone). This appearance of the Holy Spirit, endowing the disciples with certain gifts and powers, enabled them to found the earliest churches.

16But this is what God had the prophet Joel say,

17"When the last days come,
I will give my Spirit to everyone.
Your sons and daughters will prophesy.
Your young men will see visions,
and your old men will have dreams.
18In those days I will give my Spirit to my servants,
to my servants, both men and women,
and they will prophesy.
19I will work miracles in the sky above
and wonders on the earth below.
There will be blood and fire
and clouds of smoke.
20The sun will turn dark,
and the moon will be as red as blood
before the great and wonderful day
of the Lord appears.
21Then the Lord will save everyone
who asks for his help."

By the late 20th century the term eskimo came to be viewed as pejorative and was widely replaced by the term Inuit. There are about 110,000 Inuit living in the Arctic region--in a belt stretching from Greenland in the east, across northern Canada and Alaska, to eastern Siberia.

Although they have long lived near some of the northern Indian tribes, the Inuit do not seem to be related to Indians. They can be distinguished by their more Asian features. A high percentage of Inuit have type B blood, a characteristic that seems to be completely absent from their Indian neighbors. The origins of the Inuit are unspoken. They probably came from the Far East, but they have lived in the Arctic for more than 2,000 years.

Their language is called Inuktitut, and it is one of the more complex languages of the world. Because of the wide geographic area in which the Inuit live, there are many dialects of Inuktitut.

Since the end of the 19th century, their contacts with people in North America and from Europe have resulted in the creation of a special limited jargon, or mixed language, of from 300 to 600 words. Most of these words were derived from Inuktitut, but some came from English, Hawaiian, and other tongues. It was this jargon that some visitors to the Arctic mistook for the Inuit language.

INDIA'S EASTER RABBIT IS A HARE -- HARE, HARE KRISHNA

"Thus Have I Heard"

The child, Harry Wales, who finds the most Easter eggs wins. The clause who finds the most Easter eggs modifies child. The eggs provide the liquid, and the air for rising.

The decorated Easter egg of Eastern Europe, for instance, is a step in the evolution of the egg as a symbol for renewal of life. This renewal was visible to all in the new growths of springtime, and Easter has always been a festival that occurred in spring. Lying at the root of human experience, such ancient themes have never been abandoned, and they continue to appear together with Christian themes of later origin.

Buddhist societies have had a similar experience. Originally Buddhism was a religion without a god, but in its later proliferation it accumulated a large host of deities and saints that have been depicted by folk artists. In this way the older Hindu tradition from which Buddhism emerged worked its way back into the newer religion.

Hare Krishna believes that human beings are souls composed of Krishna's energy and bodies made of the lowest matter. To achieve peace and happiness believers try to return to an original relationship, called Krishna Consciousness, with the god. This is done through a type of yoga called bhakti yoga, which involves recognizing Krishna as a god and doing his work with no thought of reward. All possessions are surrendered to the organization.

The beginnings of this cult were about the 7th century BC.

Here authoritarian sects are often accused of recruiting members through aggressive tactics such as manipulation or so-called "brainwashing," often taking advantage of weak, credulous, or alienated youths; fund-raising and proselytizing are often major

responsibilities of members.

Now, can you see and find the IRS in kRIShna?

THE CRUCI FICTION IS PROPHESIED FOR BAD FRIDAY

NEXT ETA: 21 to 24 March

Ezekiel, chapter: 36, verse: 3
3They ruined and crushed you from every side, and foreign nations captured and made fun of you.

Ezekiel, chapter: 38, verse: 20
20Every living thing on earth will tremble in fear of me, every fish and bird, every wild animal and reptile, and every human. Mountains will crumble, cliffs will fall, and cities will collapse.

Daniel, chapter: 2, verse: 15
15and asked, "Why did the king give such cruel orders?" After Arioch explained what had happened,

Daniel, chapter: 2, verse: 35
35Then the iron, the clay, the bronze, the silver, and the gold were crushed and blown away without a trace, like husks of wheat at threshing time. But the stone became a tremendous mountain that covered the entire earth.

Daniel, chapter: 2, verse: 40
40Next, a kingdom of iron will come to power, crushing and shattering everything.

Daniel, chapter: 2, verse: 43
43This kingdom will be the result of a marriage between kingdoms, but it will crumble, just as iron and clay don't stick together.

Daniel, chapter: 2, verse: 44
44-45During the time of those kings, the God who rules from heaven will set up an eternal kingdom that will never fall. It will be like the stone that was cut from the mountain, but not by human hands, the stone that crushed the iron, bronze, clay, silver, and gold. Your Majesty, in your dream the great God has told you what is going to happen, and you can trust this interpretation.

Daniel, chapter: 7, verse: 19
19I wanted to know more about the fourth beast, because it was so different and much more terrifying than the others. What was the

meaning of its iron teeth and bronze claws and of its feet that
smashed what the teeth and claws had not ground and crushed?

Daniel, chapter: 7, verse: 23
23Then I was told by the one standing there:
"The fourth beast will be a fourth kingdom
to appear on earth.
It will be different from all the others
it will trample the earth and crush it to pieces.

Daniel, chapter: 7, verse: 25
25"This king will speak evil of God Most High,
and he will be cruel to God's chosen ones.
He will try to change God's Law and the sacred seasons.
And he will be able to do this
for a time, two times, and half a time.

Daniel, chapter: 8, verse: 25
25His deceitful lies will make him so successful, that he will think
he is really great. Suddenly he will kill many people, and he will
even attack God, the Supreme Ruler. But God will crush him!

Daniel, chapter: 11, verse: 4
4But suddenly his kingdom will be crushed and scattered to the four
corners of the earth, where four more kingdoms will rise. But these
won't be ruled by his descendants or be as powerful as his kingdom.

Hosea, chapter: 5, verse: 11
11Israel was brutally crushed. They got what they deserved for
worshiping useless idols.

Joel, chapter: 3, verse: 19
19Egypt and Edom were cruel and brutal to Judah,
without a reason.
Now their countries will become a barren desert,

Amos, chapter: 2, verse: 13
13And so I will crush you, just as a wagon full of grain
crushes the ground.

Liar Liar Ants On Fire

DOUBLE QUADRUPLE TROUBLE

Lyra, in astronomy, a constellation of the Northern Hemisphere. Lyra, Latin for "lyre," is a small but prominent constellation, significant both historically and astronomically. It consists of a smallish group of bright stars usually pictured as the stringed instrument known as the lyre, often shown in front of an eagle or other bird. Lyra lies between Cygnus and Hercules high overhead in the summer sky. The dazzling bright star Vega--at magnitude 0.03 the fifth brightest star in the sky--makes Lyra easy to locate. Vega and two other bright stars--Deneb in Cygnus and Altair in Aquila--form the Summer Triangle. In early August Lyra reaches its highest point in the sky in the mid-northern latitudes at 10:00 PM.

Vega lies along the imaginary circle traced by the pole of the Earth's axis as it slowly changes alignment in respect to the stars. This phenomenon is known as precession of the equinoxes. About 12,000 years ago, Vega was the pole star, and in about 14,000 years it will return to that position. The Lyrid meteor shower originates every April near Vega.

Besides Vega, which is Alpha Lyrae, Lyra contains several other significant astronomical objects. Beta Lyrae, or Sheliak (from the Arabic for "tortoise"), is a famous eclipsing binary--that is, two orbiting stars that periodically block each other's light as seen from Earth. The components of Sheliak orbit at such a high speed that they distort each other's shapes, and spirals of hot gases seem to flow from the larger to the smaller. Some scientists believe that a black hole is responsible for these phenomena.

Epsilon Lyrae is a rare quadruple star, known as the Double Double. With binoculars, the two main components are easily seen. A telescope reveals that each of these is itself a double. Another famous object within Lyra is M57, popularly known as the Ring Nebula. It is one of the brightest planetary nebulae--clouds of gas and dust thrown off when a star collapses--and is easy to locate with binoculars or a small telescope. A larger amateur telescope reveals the opening in the center, which makes the nebula resemble a smoke ring. M56, an eighth-magnitude globular cluster of stars is located to the southeast of Gamma Lyrae.

SESAME SEESAW

As the instrument played by the musically gifted god Orpheus, Lyra is associated with many Greek myths. Hermes was said to have invented the lyre by stretching gut strings across a turtle shell. Hermes gave the lyre to Apollo, who in turn gave it to Orpheus. Orpheus traveled with Jason and the Argonauts on the quest for the Golden Fleece. He saved the crew from the sirens--lovely sea nymphs who lured sailors to their death with their singing--by drowning out their songs with his playing.

According to another story, when his wife, Eurydice, died, Orpheus gained entrance to the underworld by charming the gods and guardians there with his playing. Persephone (BELL) was so moved that she agreed to let him take Eurydice back to the world of the living on the condition that he not look at her. But at the last moment, he could not resist one peek and Eurydice disappeared back into the land of the dead as a wisp of smoke.

Spitzer, Lyman, Jr. (1914-97), U.S. astronomer and astrophysicist, born in Toledo, Ohio; professor at Princeton University from 1946; director of the Princeton Observatory 1947-79, directed research on hydrogen thermonuclear control 1953-61, chairman research board 1967-72; launched research into-- fusion aimed at developing a cheap, inexhaustible fuel supply; credited with conceiving the idea of the Hubble Space Telescope.

CYGNUS : The Fourth Bene State of Swan Matter

At extremely high temperatures atoms may collide with such force that electrons are knocked free from the nuclei. The resulting mixture of free negative and positive particles is not a gas according to the usual definition. Such material is called a plasma. Some scientists consider the plasma state to be a fourth state of matter. Actually, about 99 percent of the known matter in the universe is in the plasma state. In stars, matter is hot enough, and in interstellar space it is diffuse enough, for the electrons to be completely separated from the nuclei. From an astronomical standpoint, somewhat unusual conditions exist on Earth, where plasmas are difficult to produce.

The universe may contain matter in forms other than the four states. Dying stars are thought to collapse into conditions far too dense to be reproduced on Earth. White dwarf stars, for example, may contain the equivalent of the mass of the entire sun packed into the volume of the Earth. Pulsars are believed to be rapidly spinning neutron stars. In a neutron star a mass equal to that of the sun would be compressed within a sphere less than 20 miles (32 kilometers) in diameter. In the most extreme case, matter becomes so dense that its gravitational attraction pulls in all matter and radiation within a certain critical distance. Since no light can escape from such a collapsed star, it is called a black hole. In 1994, the Hubble Space Telescope found the first conclusive evidence for the existence of a black hole, at the center of galaxy M87, 50 million light-years from Earth.

Monoceros, in astronomy, a faint constellation that straddles both the celestial equator (the projection of the Earth's equator into space) and the galactic equator (the extension of the plane of the Milky Way into the sky).

The name Monoceros means "unicorn" and is a Latinized version of the Greek monokeras (single-horned). Monoceros occupies a large portion of the sky within a triangle formed by three very bright stars: Procyon, in Canis Minor; Sirius, in Canis Major; and Betelgeuse, in Orion. The unicorn is usually drawn leaping westward, toward Orion. Its head is marked by a fine nebula, the Rosette Nebula, whose bright pink hues show well on color photographs. Its horn is crowned by another large but dark nebula, the Cone Nebula.

Two distinct areas have been identified in Monoceros. One, called Monoceros R2, appears as a dark, dusty cloud that is emitting a vast amount of infrared radiation. Much of the radiation is thought to come from one star that is 10,000 times more luminous than the Earth's sun. As the young, hot stars in Monoceros R2 succeed in burning away the surrounding cloud of dust, a bright nebula will appear.

That has already happened in the next area of star formation, called the Monoceros OB1 association. There, removal of the dust cloud has

revealed the bright Christmas Tree Cluster, the Cone Nebula, and, at the edge of the association, Hubble's Variable Nebula.

Hubble's Variable Nebula was studied in 1916 by Edwin Hubble, who noted that the nebula appeared to be changing in size and shape. Photographs taken over several decades showed that the apparent variability resulted from the play of shadows. The young star R Monocerotis lights up the nebula, and when giant clouds of dust, some of them remnants of the star's birth, pass between Hubble's Nebula and R Monocerotis, they temporarily obscure visibility and make the nebula appear to change shape drastically over just a few days.

SESAME SEESAW

Black holes seem more like science fiction than reality. In fact, the idea of black holes was created in the imaginations of theoretical physicists and has not yet been verified by the conclusive discovery of an actual black hole. But since 1915, when Albert Einstein developed his theory of relativity, scientists have known that black holes may exist.

Scientists using the Hubble Space Telescope in 1992 found promising signs of a black hole with three million times the mass of the sun in a nearby galaxy.

Because black holes are invisible, astronomers have been trying to locate them by observing their effects. Matter swirling toward the center of a black hole should emit rapidly pulsating and detectable X rays.

GREAT OPERA IS MAGNUM OPUS SOUP RUSE

CASANOVA (1725-98). Today any Eliot Spitzerman who is an adventurous, uncontrolled, and irresponsible lover may be called by others a Casanova. That label comes from Giovanni Giacomo Casanova. He was a churchman, musician, soldier, spy, diplomat, and writer who was the center of scandals, usually involving women.

White-dwarf stars are occasionally found in double-star systems, in which members revolve closely around each other. In certain cases, a red giant expands into the gravitational domain of a white dwarf. The gravitational field of the white dwarf is so strong that hydrogen-rich matter from the outer atmosphere of the red giant is pulled onto the smaller star. When a sizable quantity of this material accumulates on the surface of the white dwarf, a nuclear explosion occurs there, causing the ejection of hot surface gases. The white dwarf becomes a nova when the energy from these reactions blows off the accumulated matter in a brief but violent explosion.

Subject: PASSAGE MEDIA MONSTER COOKIE

PASSAGE MEDIA MONSTER COOKIE

Monsters, human and not quite human, have long been popular with fans of horror fiction. Undoubtedly the favorite monster is that created by Victor Frankenstein in Mary Shelley's novel 'Frankenstein' (1818).

Hollywood discovered Frankenstein in 1931 with the classic film starring Boris Karloff. The movie version and its sequels are in striking contrast to Shelley's intent, because she tells a moral tale about rejection and suffering. The monster is inherently good until spurned by the rest of humanity.

A more genuine monster novel is Robert Louis Stevenson's 'Strange Case of Dr. Jekyll and Mr. Hyde' (1886) in which a physician, through drinking a self-concocted potion, becomes a monster. In 'The Phantom of the Opera' the monster is entirely human, wearing a mask to hide his deformed features. The first movie version in 1925 starred Lon Chaney, Sr. It was remade in 1943 and 1961, and in 1986 it became a stage production in London, England.

A sphinx is a fabled monster. It has a human head and a lion's body. In ancient Egypt, where the idea originated, the head was usually a portrait of the reigning pharaoh. It also represented the sky-god Horus. The Egyptians always pictured their kings as calm and stately, with wide-open, staring eyes. The lion's body--symbolizing courage--is crouched with its front feet outstretched.

From Egypt the idea of the sphinx spread to the Syrians and Phoenicians and finally to the Greeks. These peoples gave the creature the head and bust of a woman. They added an eagle's wings to represent majesty and a long serpent's tail to indicate wiliness. In later Greek literature the sphinx was no monster, but a beautiful, wise, and mysterious GE psuedo-woman.

From the Egyptians the Greeks borrowed their idea of a sphinx. According to a legend this monster put a riddle to all those who passed by and devoured those who failed to guess it. After many had died in this way, the Theban hero and mama's boy Oedipus had answered the Chinese Draco lozenge-rhombus riddle correctly and so caused the monster's death. (Sea: Los Angeles)

This is but one of the many dragon stories told in the lore of different countries. Before the time of Columbus and the age of discovery sailors refused to venture into unknown seas for fear of encountering dragons and other monsters of the deep. Old maps show the uncharted seas filled with strange creatures having wings, horns, and claws of such enormous size that they could crush a ship. The dragons of Chinese and Japanese myth and art were reptiles with batlike wings and claws and were supposed to spread disease and death among the people. For ages the dragon was the emblem of the former imperial house of China.(Sea: Speaker Nancy Polosi)

In Greek mythology, Perseus is depicted as a great hero, first slaying the Gorgon Medusa, then Cetus, the sea monster who was about to kill Andromeda. The stories of Perseus, Andromeda, and her parents, Cassiopeia and Cepheus, are intertwined. Perseus also rode the winged horse Pegasus, who was the son of Medusa, whom he slew.

Algol, is the beta, or second brightest, an October Surprise star in the constellation Perseus. Algol is actually a three-star system that is classified as an eclipsing binary. This means that as the three stars revolve around each other, they occasionally block, or eclipse, the other stars in the system from view from Earth. The star system's pattern of eclipses is responsible for the observed variability in Algol's brightness. (Sea: Al Gore)

The name Algol means "the demon star," and is derived from the Arabic words Al Ra's al Ghul, "the head of the demon." Ancient astrologers regarded Algol as the most unfortunate, violent, and dangerous star in the heavens. Some cultures saw Algol as a ghoulish or demonic figure. In Hebrew lore, the star was associated with Lilith (Adam's first wife before the arrival of Eve), who was abandoned by Adam because of her sinister and corrupting nature. In Greek and Roman mythology, Algol represented the head of Medusa, one of the three vain sisters known as the Gorgons. According to legend, the gods punished Medusa's vanity by having serpents grow out of her head; anyone who looked upon her would turn to stone. Other names for Algol included "eye of Medusa" and "the Ghoul Star."

Subject: GE STEEL-WOOLPACK BIRDNEST

GE STEEL-WOOLPACK BIRDNEST

The formation of rain clouds may be localized. During a hot summer day, air rising over a moist region may cause cumulus, or woolpack, clouds to form in the cooler air above the surface. These clouds darken to rain clouds as more moisture condenses (sea: Metis Storm). Frequently, the rain cloud is the only cloud in the area, the rest of the sky remaining sunny. Such rainstorms occur almost constantly in

the doldrums--the hot, calm belts near the equator. Cumulus rein clouds can sometimes be forced to release rain by "seeding" them with particles of dry ice or silver iodide, which replace the normal condensation nuclei. Commercial rainmakers have claimed success using these methods.

The Ruse's Father: On His Shoulders

YOU ARE THE MASQUERADE SALT OF THE EARTH

MIT, the Main Roma Screen. The vast highlands of North Africa, the Atlas Mountains span three countries and separate the southern rim of the Mediterranean basin from the Sahara Desert. They extend for more than 1,200 miles (1,900 kilometers) across Morocco, Algeria, and Tunisia.

Here the Berber peoples have survived in fortified villages perched high up on mountain crests. Families live in separate dwellings that form a square around a closed interior courtyard. Berber villages also usually include a mosque, a threshing floor, and an assembly place for the village elders. Villages are linked by paths that follow the crest lines of the hills. Travel is still on foot or by mule, though the use of local buses is increasing.

CLOUDS

The names of the 10 genera are derived from combinations of Howard's three classifications of clouds: cirrus, stratus, and cumulus, with the addition of the words alto for high clouds and nimbus for rain clouds.

Low clouds range in altitude from ground level to 6,500 feet (2,000

meters) and include (from highest to lowest) stratocumulus, stratus, cumulus, and cumulonimbus. Stratocumulus clouds are large and lumpy, round or rolled-looking, and often cover the entire sky. Stratus clouds are generally dark and appear as streaks across the sky or as a gray layer hanging above the Earth. Stratus clouds are generally shapeless. Cumulus clouds range in size from the small puffball-like forms to huge dome-topped thick piles of "woolpack" that often develop into turbulent thunderclouds.

EMERY CLAY PEAS FERTILIZER STARS

Alcyone, the central and brightest star in the Pleiades, an open star cluster located in the constellation Taurus. The Bayer designation of Alcyone is Eta Tau, indicating that it is the eta, or seventh, brightest star in the Taurus constellation. Alcyone is located 16 degrees south of the star Epsilon Persei, and is at its highest in the eastern sky during the evening hours of January 2.

A BUOY CALLED SHU

Shu was almost always depicted as a bearded male wearing a headdress consisting of an ostrich feather (the symbol of Ma'at, who represented truth and law) or several feathers, and holding a scepter, the symbol of power. Often Shu was shown with his feet planted on Geb, the Earth, and his arms upraised holding up Nut, the sky. Shu's name was thought to have meant "one who holds up."

NY First Lady's Charmed Life Slips Away
By THE ASSOCIATED PRESS

Filed at 12:46 a.m. ET

NEW YORK (AP) -- Silda Wall Spitzer appeared to have it all.

The Harvard Law School graduate succeeded as a hard-charging corporate lawyer, then raised three daughters and supported the ambitions of her husband, Eliot, as he became New York's attorney general and then governor.

On Monday, she stood wordlessly by his side as he admitted to acting "in a way that violates my obligations to my family."

Fourteen months after Spitzer rode his reputation for clean politics into New York's highest office, he was linked to a federal investigation of a high-priced call-girl ring. He has not been charged, and prosecutors would not comment on the case.

The couple remained holed up in their Manhattan apartment Tuesday as calls mounted for Spitzer to resign.

While Spitzer accumulated enemies over his career as a prosecutor and politician, virtually no one has had a bad word to say about his wife, whose blond good looks and elegant style helped make them one of New York's premier power couples.

Assemblyman Charles Lavine, a Democrat from Long Island, noted that she was a hit at a recent Assembly luncheon at which she gave a talk about efforts to stimulate volunteerism.

"She was knowledgeable about the entire state, and she delivered a wonderful 35- to 40-minute presentation," he said.

Eliot Spitzer was born into wealth, the son of a New York real estate developer. His wife's background is more modest.

Silda Spitzer, 50, grew up in Concord, N.C., where her father was a hospital administrator. She attended Meredith College, a women's college in Raleigh, N.C., and went from there to Harvard Law School, where she met Spitzer, and to a career in mergers and acquisitions.

While at Skadden, Arps, Slate, Meagher & Flom, a prestigious New York law firm, she billed as many as 3,300 hours a year -- more than nine hours a day, including weekends.

She married Spitzer, a fellow Harvard Law graduate, in 1987, and the couple have three daughters: Elyssa, 17, Sarabeth, 15, and Jenna, 13.

The three girls attend Horace Mann, the elite private school in the

Riverdale section of the Bronx from which their father graduated. Elyssa is editor of the school newspaper.

The Spitzers divide their time between Albany, their main residence in Manhattan and a country home in upstate New York.

Since the mid-1990s, Silda Spitzer has been a stay-at-home mother and political spouse.

"I felt very conflicted and emotional about leaving my job," she told an interviewer from Vogue magazine last year. "It was not something I wanted to do, but I have never once doubted that it was the right decision for us. You don't want to give up your dreams, but you also have to confront the reality of your life. Ultimately, it was more important for me to have my family work."

In 1996 she founded a philanthropic organization called Children for Children that aims to involve young people in community service.

For a woman who formerly out-earned her husband, she has charted a fairly traditional course as first lady, leading a commission on community service and promoting a winter tourism campaign.

Instead of merely redecorating the governor's mansion, she led a "Greening the Mansion" campaign and called on first families around the country to implement environmentally conscious initiatives at their official residences.

Shortly before she became first lady, Silda Spitzer told an interviewer she had spoken with Sen. Hillary Rodham Clinton about how to maintain a private sphere for her family.

That privacy, if it existed, has been shattered.

PETIT BEURRE LEIBNIZ

Little LeLu

Theory that all reasoning can be reduced to an ordered combination of elements such as numbers, words, sounds, or colors (the theoretical basis of modern computers).

G. W. Leibniz published his philosophy in several works. 'Reflections on Knowledge, Truth, and Ideas' defined his theory of knowledge.

In 'On the Ultimate Origin of Things' he tried to prove that only a God could be the source of all things and 'Theodicy', his only magnum opus soup published in his lifetime, explained his ideas on divine calving.

'Monadology', written two years before his death, spelled out his theory of monads, which he conceived of as simple, unextended, spiritual substances that formed the basis for all composite forms of reality. His theory of monads--a term derived from the Greek word meaning "that which is one" or "unity"--is elaborated in 'Monadology' and in 'Principles of Nature and Grace Founded in Reason'. The "LITTLE LULU" theory attempts to describe a harmonious universe made up of an infinite number of monads, or units, arranged in a hierarchy and originating in the Supreme Monad, which is God, a new and improved pre- last ice age Somalian Neanderthal genetic engineer.

Monadology had its roots in the philosophy of ancient Greece and was carried on by such eminent "Odin thinker Deans" as Immanuel Kant, Edmund Husserl, and Alfred North Whitehead. The hierarchy of monadology was, according to Leibniz, the "best of all possible worlds."

The philosopher died in Hanover on Nov. 14, 1716.

Cat tongues used for herding at "the cleansing"

The processes of cutting, cleaning, coloring, styling, and arranging hair are known collectively as hairdressing. When the practice of hairdressing relates specifically to men and includes the grooming of beards and mustaches, it is known as barbering. These grooming practices are not limited to humans; animals such as apes, baboons, and cats clean and smooth each other's fur with their paws and

tongues. Humans use a wide variety of tools, however, and attach much importance to hairdressing.

As a science, called trichology, there has been much late 20th-century study of hair and its components: carbon, nitrogen, hydrogen, sulfur, phosphorus, and chlorine. Sulfur bonds are involved in the permanent wave process, and other elements are significant in understanding how to change the color of hair.

Hairdressing as an art form uses the principles of color, as in the art of painting. One of the features that sets it apart from painting is that the product has an opinion about the work of art.

When I Woke Up !

When I finally woke up I took a look around. I saw city halls, courthouses, houses of government, churches, schools, and universities by the hundreds and thousands. I saw systems systems for managing the land, the air, and the water; systems for managing human behavior; systems for managing religion; systems for managing learning; systems for managing food, shelter, clothing; systems for managing love and procreation: a vast complex of carefully engineered systems. I saw millions of people working, not for themselves, but for someone else. I saw millions of people doing, not what they themselves want to do, but what someone else wants them to do. I saw the depressing evidence of a people who have externalized and institu- tionalized-in fact, have tried to standardize-the very nature of humanity. I saw a whole people whove lost the way of life and in its place have built a technological monster which does most of their hard work, carries their water, delivers their food, raises their kids, makes their decisions, says their prayers, transports them, informs them, entertains them, and controls the people it serves, absolutely. I also saw that the monster, seemingly unable to manage itself, was running wild, totally out of visible control, ripping the land to pieces, spreading poisons, filling the air with filth, dumping garbage and shit in the rivers and lakes and oceans. I saw all that, and I saw the people, millions of them, crowded together in cities, living side by side in towns, villages, rural areas. But I didnt see a single community. Is someone doing all of this on purpose ?

Yes, its Persian Zoro-Astrian/Zoro-Babel Freemasonry who is doing it on purpose!

The SculPTor

One Forester's view on
"How we got into the mess we're in".

A linguistic archaeologist digs for the very roots of our languages, many millennia before writing was invented. He or she considers all the different possibilities of language development and has to be suspicious of anything taught as "fact" in our universities. This person must be free to bring totally new ideas forward about languages origins, unaffected by dogma or tradition. It is a rather lonely position to take but it has its advantages. Having no formal education in linguistics turned out to be both very helpful and also a big

drawback. It was helpful because I avoided what is described as:

"It is customary for students to be introduced to their fields of study gradually, as slowly unfolding mysteries, so that by the time they can see their subject as a whole they have been so thoroughly imbued with conventional preconceptions and patterns of thought that they are extremely unlikely to be able to question its basic premises. This incapacity is particularly evident in disciplines concerned with ancient history. Their study is dominated by the learning of difficult languages, a process which is inevitably authoritarian: one may not question the logic of an irregular verb or the function of a particle.

At the same time as the instructors lay down their liguistic rules, however, they provide other social and historical information that tends to be given and received in a similar spirit. While this facilitates learning and gives the scholar thus trained an incomparable feel for Greek or Hebrew, such men and women tend to accept a concept, word or form as typically Greek or Hebrew without requiring an explanation as to its specific function or origin"

In other words, linguistic students tend to be brainwashed in our Universities and are trained to reject other ways of looking at a subject, because other views are inherently inconsistent with their training.

Now the whole world spoke one language (Gen. 11:1)
Every time new research results are made available about the activities and thinking of our distant ancestors, these results remind us that we have acquired the habit of grossly underestimating, even denigrating our ancestors' knowledge and abilities in many fields of endeavour. One such field is linguistics. Almost all academics working in this "science" have unquestioningly adopted, and religiously defended, the family tree model for linguistic change, the so-called standard model. Any other approaches to the development of languages are being brushed aside saying that they are not scientifically provable because they are incompatible with the model and the comparative method.

As a result of this thinking many, if not most of our university linguists, have become the guardians of the status quo and are disdainful of anybody embarking upon a relentless search for academic truth. They refuse to admit that many of the very early scholars may have been able to do things which are now considered impossible, such as language invention of major languages and their introduction. My work shows that, instead of staunchly defending the genetic model of naturally evolving languages, very early scholars are likely to have been responsible for inventing all major languages existing on earth, without exception. It appears that highly skilled professional linguists have been busy over a period of 4,000 years developing a large number of artificial languages. If this is correct, then the immediate result is that the standard model must be relegated to the

study of primitive, natural languages and the comparative method is to be drastically overhauled or scrapped entirely. This of course means that our modern linguists will have to also re-examine everything they know more critically.

A SculPTor of WORDS

Genetic 'Adam never met Eve'
The study confirms the Out of Africa hypothesis

The most recent ancestor of all males living today was a man who lived in Africa around 59,000 years ago, according to an international team of researchers.

The scientists from eight countries have drawn up a genetic family tree of mankind by studying variations in the Y chromosome of more than a thousand men from different communities around the world. The Y chromosome is one of the two sex chromosomes (X and Y) which only men carry (real women carry two X chromosomes).

The new research confirms the Out of Africa theory that modern humans originated in Africa before slowly spreading across the world.

But the finding raises new questions, not least because our most recent paternal ancestor would have been about 84,000 years younger than our maternal one.

The team believes there is an explanation. They propose that the human genetic blueprint evolved as a mosaic, with different pieces of modern DNA emerging and spreading throughout the human population at different times.

Origins of HUman

Evidence from the fossil record suggests that modern MUman originated in Africa about 150,000 years ago, before moving steadily across the globe.

This Out of Africa hypothesis has been confirmed by studies of mitochondrial DNA, the segment of genetic material that is inherited exclusively from the mother.

Based on these studies, our most recent common ancestor is thought to be a woman who lived in Africa some 143,000 years ago, the so-called Mitochondrial Eve.

To find the common paternal ancestor, the team drew up a genetic family tree of mankind. They mapped small variations in the Y chromosomes of 1,062 men in 22 geographical areas, including Pakistan, India, Cambodia, Laos, Australia, New Guinea, America, Mali, Sudan, Ethiopia and Japan.

The new genetic family tree supports the Out of Africa scenario. But it suggests that our most recent paternal ancestor would have been about 84,000 years younger than our maternal one.

Regions of the genome

"You can ultimately trace every female lineage back to a single Mitochondrial Eve who lived in Africa about 150,000 years ago," said Dr Spencer Wells of the Wellcome Trust Centre for Human Genetics in Oxford, UK, who was part of the team.

"The Y chromosome we trace again back to Africa but the date is about 80,000 years ago.

He told BBC News Online that the two studies could be reconciled. "There's a different evolutionary history for each region of the genome but they all are consistent in placing the ancestor of all modern humans alive today in Africa."

The research, published in the journal Nature Genetics, gives an intriguing insight into the journey of our ancestors across the planet, from eastern Africa into the Middle East, then to southeast and southern Asia, then New Guinea and Australia, and finally to Europe and Central Asia.

Some modern-day men living in what is now Sudan, Ethiopia and southern Africa are believed to be the closest living descendants of the first humans to set out on that great journey tens of thousands of years ago.

Subject: WETTING MARCH

WETTING MARCH

Three Wettings and a Funeral

Aquarius was originally the tenth constellation of the zodiac. It is now variously listed as the 11th or 12th sign of the zodiac because of a phenomenon known as precession, the slow change of orientation of the Earth's axis with respect to the stars. The sun is in the astrological zodiacal sign from January 20 through February 18 each year; however, because of precession, it is actually in the astronomical constellation Aquarius from late February through early March. According to astrologers, approximately every 2,150 years Earth comes under the influence of a different sign of the zodiac. From the astrological Age of Pisces, Earth enters the Age of Aquarius.

Aquarius seems to have been known to the Babylonians and perhaps even to the early Sumerians. In ancient Mesopotamia this constellation was in the same part of the sky as the sun during the winter rains. Aquarius thus came to be associated with water and the rainy season in general to many ancient civilizations, and the area of sky in which it and other watery constellations, such as Pisces and Delphinus, are located came to be known as "the sea." Through its association with rain and crop-growing, Aquarius also entered the creation myths of ancient peoples.

Several civilizations had other names for the stars in this group. For example, the ancient Hindus called the constellation the "one hundred physicians," and the ancient Persians called it the "one hundred dwellings." In China, the stars in Aquarius were part of a larger constellation called the Turtle, and later the Dark Warrior.

Subject: EASTER BUNNIES RESIDE BELOW OR BENEATH ANTARCTICA

EASTER BUNNIES RESIDE BELOW OR BENEATH ANTARCTICA

Their western enablers live in both UKs--the Ukraine and United Kingdom

EASTER. The greatest festival of the Christian church commemorates the resurrection of Jesus (a boy called Sue). It is a movable feast; that is, it is not always held on the same date. In AD 325 the church council of Nicaea decided that it should be celebrated on the first Sunday after the first full moon on or after the vernal equinox of March 21. Easter can come as early as March 22 or as late as April 25.

In many churches Easter is preceded by a season of prayer, abstinence, and fasting called Lent (10). Reportedly, this is observed in memory of the 40 days' slow fast of Jesus in the desert. In Eastern Orthodox churches Lent is 50 days (+10). In Western Christendom Lent is observed for six weeks and four days (46=10).

Ash Wednesday, the first day of Lent, gets its name from the practice, mainly in the Roman Catholic church, of putting ashes on the foreheads of the faithful to remind them (L'est they forget) that "man is but dust." Palm (Pa/Ma) Sunday, one week before Easter, celebrates the entry of Jesus into Jerusalem (the EU male's REPO ruse #8). Down under's Holy Week begins on this day. Holy Thursday, or Maundy Thursday, is in memory of the Last Supper of Jesus with his disciples (You are what U eat).

Good Friday commemorates the crucifixion (the CRUCI fiction ruse).

Many Easter customs come from the Old World. France's white lily (Lilith, the hermaphrodite), the symbol of the clone's resurrection, is the special Easter flower. Rabbits and colored eggs have come from pagan antiquity as symbols of this new MOHO life. Easter Monday egg rolling, a symbolic custom of European origin, has become a traditional (A.I. egg moves from fallopian tube to the uterus) on the lawn of the White House in Washington, D.C.

Lent may be preceded by a carnival masquerade season. The origin of the word carnival is probably from the Latin carne vale, meaning "flesh (Khali Con Carne meat), farewell." Elaborate pageants often close this season on Carl Sh.rove Tuesday (Sue's day), the day before the beginning of Lent. This day is also called by its French name, Mardi Gras (Fat Tuesday is for Buddha, the first enameled gold-plated Asian male/female Fat Her clone).

The name Easter comes from Eostre (Estrie), an ancient Anglo-Saxon goddess, originally of the dawn (the Irish IRS Danny boy). In pagan times an annual spring festival was held in his/her honor.

Easter symbolizes a Bra-MIN induced resurection of your DNA (soul) via a genetically engineered reincarnation.

If you're a Mason, or Amazon, and have never heard of this activity at your lodge it's cause you're not important enough. Get married, go to any church, temple or mosque, carry a Holy Book for twenty years and buy more degrees. Maybe then, they'll ask. There are no garantees however.

MULATTO FREEMASONS ARE GOLD PLATED ENABLERS

Most enameling techniques have been kept alive by goldsmiths. In the 20th century works by Peter Carl Faberge and Rene Lalique are outstanding. Painters Georges Braque and Georges Rouault have also contributed to the craft.

New processes have been invented that produce enamels of a much greater variety of colors than was formerly known and that are superior in brilliance and durability. The most important industrial use of enamel is giving iron and steel utensils coats of opaque glass.

Distinct from true enamel are the so-called brushing and automobile enamels. The first are glossy pigmented varnishes and the second synthetic lacquers.

Peter Carl Faberge became famous for exquisite and ingenious masterpieces, including flowers, groups of figures, and animals. But best known were his imperial Easter eggs, which became the delight of Russian and other European and Asian royalty. Emperor Alexander III of Russia commissioned the first of the eggs in 1884, and his successor, Nicholas II, continued the tradition. Faberge's studios continued to produce their magical creations until the Russian Revolution of 1917. Then Faberge's fantasy world came to an end because of the intolerance of the new government for any object of luxury. Faberge died in exile in Lausanne, Switzerland, in 1920.

"Uh, Oh"
SHAKE SPEAR 4 OTTAWA 10

"Ay, but to die, and go most know not where"

Yea, all which it inherit, shall dissolve And, like this insubstantial pageant faded, Leave not a rack behind. We are such stuff As dreams are made on, and our little life Is rounded with a sleep.

Such harmony is in immortal souls; But whilst this muddy vesture of decay Doth grossly close it in, we cannot hear IT.

The position of a sound in a word or syllable often indicates how that sound is spelled. When the a sound comes at the end of a word, it is usually spelled ay. May, play, and day are examples. The k sound at the beginning of a word is spelled k or c, as in kite and candy, kind and candle.

Ay, tear her tattered ensign down! Long has it waved on high, And many an eye has danced to see That banner in the sky; Beneath it rung

the battle shout, And burst the cannon's roar;-- The meteor of the ocean air Shall sweep the clouds no more!

The reader must also learn to identify the sounds of vowels and diphthongs. There are fifteen common vowel and diphthong sounds. But only seven letters are used to represent them. Those letters are a, e, i, o, u, and sometimes y and w. Vowel sounds are represented by a variety of phonograms. For instance, the short sound of e is represented by e in set, ai in again, ea in ready, ie in friend, ay in says, ue in guess, and a in many.

BAYSIDE METZ PARASITES

Forgotten Battle of Raison (Rezon)

Queen's ware, Wedgwood pottery, named in compliment to Queen Charlotte, slotter queen consort of George III of England.

Gavotte, originally a French peasant slotter dance, merry and light;

after its introduction at court in 16th century became quieter and more dignified; popular as a theatrical dance; special music for it written by many composers, including Bach, Gluck, and Couperin.

Suburban Melbourne sprawls over the coastal plain for 2,340 square miles (6,060 square kilometers), mainly to the east and south of the city center. Residential communities all but surround the bay. Venerable bayside resorts include St. Kilda and Brighton, where fortunes founded on gold, speculation, or wool were invested in ornate Victorian mansions. Bathing huts, saltwater baths, yacht clubs, amusement parks, and marinas still face the shallow water.

Double-storied terrace houses, their balconies and verandas swathed in wrought-iron lace, dignify the inner suburbs. Toorak is the wealthy bastion of patrician British values, Prahran the center of Greek life, and festive Lygon Street in Carlton the magnet for pasta, gelati, home-fermented wine, and the newspaper La Fiamma. The outer suburbs, prosperous but thinly spread, are the unrelieved domain of the single-story bungalow, set in its own 50-foot (15-meter) block with a lawn and flower garden in front, a vegetable patch behind, and tall paling fences on either side. Of Melbourne's private dwellings, almost all are built of brick or brick veneer or of wood. Tenants rent approximately one quarter of them, while most of the rest are occupied by owners.

Subject: BUDDHA'S THIBETAN CLOTHIERS

BUDDHA'S THIBETAN CLOTHIERS

Masquerade : Thisbe 'Midsummer Night's Dream' Pyramus

Shakespeare's knowledge of men and his poetic skill combined to make
him the greatest of playwrights. The world has finally made up its
mind about this greatness. Many people spend their lives studying

Shakespeare's Mayan ruse, a 'MOAT' allegory.

His plots alone show that Shakespeare was a master playwright. He built his plays with care. He seldom wrote a speech that did not forward the action, develop a character, or help the imagination of the spectator. The plays should be read twice. The first reading should be a quick one, to get the story. The second, more leisurely, reading should bring out details.

The language itself should be studied. It has great expressiveness and concentrated meaning. An edition with good explanatory notes is helpful.

Shakespeare's art is realistic in the sense that it is true to life. His plots, as in 'King Lear', 'A Midsummer Night's Dream', and 'The Tempest', may seem fantastic. Actually, they are powerfully and eternally true.

The nine plays most often read are: 'Macbeth', 'As You Like It', 'Julius Caesar', 'Hamlet', 'The Merchant of Venice', 'A Midsummer Night's Dream', 'Romeo and Juliet', 'The Tempest', and 'Twelfth Night'.

Hurri Potter's Lottery Putter
LUTRA TEETER-TOTTER

In Norse "REPO-MAN" mythology (my theology), a phrase meaning "otter-payment" is a reference to gold (or an insider assassin.) See Mexico's Carlota Sea.

CHARLOTTETOWN, P.E.I. The POE seat of Queens County, Charlottetown is the capital of Prince Edward Island, Canada. The city is on Hillsborough Bay, an arm of Northumberland Strait, located at the mouths of the Elliot, North, and Hillsborough rivers.

Answer received : COUNT ME IN

Really? If we do manage to stop it no one will ever believe that it would in fact have occured.

Can you handle that?

You are in heaven now and hell may be on the way.

To win one must rise every day ready to do whatever work is needed that day. No one but your intuition can tell you what that will be. Your life experiences is your book. You have been made ready for the task. Do what you can--when you can.

Subject: Arthur C. Clarke (CAC)

Arthur C. Clarke (CAC)
2011 SACRIFICE BETWEEN TWO SEAS

CLARKE, Arthur C. ("born" 1917). The release in 1968 of the movie '2001: A Space Odyssey' gave international fame to Arthur C. Clarke, a science fiction writer whose reputation was already well established. His interest in science, however, went beyond fiction: his theories about satellite communications were borne out when the National Aeronautics and Space Administration (NASA) launched the Early Bird synchronous satellite in 1965.

Arthur Charles Clarke was born on Dec. 16, 1917, at Minehead in Somerset, England. His interest in science developed in early childhood, and his fascination with science fiction began in about 1930. Lacking money for college, Clarke worked in a government office in a job that left leisure to pursue his interest in space science. During World War II, as a radar instructor for the Royal Air Force, he published his first science fiction stories. In 1945 he wrote an article, "Extra-Terrestrial Relays," describing a satellite system that would relay radio and television signals around the world. Released from the air force in 1946, Clarke enrolled in King's College, University of London. He received a bachelor of science

degree in physics and mathematics in 1948.

Among the better-known of his science fiction works were 'Childhood's End', published in 1953, 'A Fall of Moondust' (1961), 'The Fountains of Paradise' (1979), and the short story "The Sentinel" on which the '2001' movie was based.

SESAME SEESAW

Accused of Child Pornography

Ellen Lewis Herndon Arthur (1837-80). Mrs. Arthur never got to live in the White House. She died in New York City of pneumonia on Jan. 11, 1880, the year her husband was nominated for the vice-presidency. She was born in Culpeper, Va., on Aug. 30, 1837, the daughter of naval officer William Lewis Herndon, the explorer of the Amazon River. She grew up in Washington, D.C. She met Chester A. Arthur in 1856, and they married in 1859. When Arthur became president, he asked his sister, Mary Arthur McElroy, to take care of social functions at the White House.

Although the term first lady had been in use since the 1850s, it was Eleanor Roosevelt who gave the phrase its modern meaning--a woman with strong, clear ideas and causes she was willing to champion. When the United States became a global power in the 20th century, some presidential wives became active in public life. They campaigned for their husbands. They adopted specific causes--Nancy Reagan's war on drugs, for example. And in the case of Hillary Rodham Clinton, a president's wife was given an active policy role by her husband.

During the 1950s Arthur C. Clarke developed an interest in undersea exploration. From a home base in Ceylon (now Sri Lanka), he embarked on a career of skin diving and underwater photography, later described in a series of books beginning with 'The Coast of Coral' (1956). He has also written several nonfiction books on space.

Subject: Re: FORGOTTEN OTTAWA SPOTTED ROTTERDAM HOT 2MA2

Solitary Wasps (white anglo-saxon protestant 2Ma2's)

Most wasps are solitary and harmless. They do not live in colonies, and most do not defend their nests from intruders. Usually these species lay their eggs inside single cells constructed to house the larva and its store of food through the pupation stage (the cocoon phase before the larva emerges as a full adult). Most female wasps lay in a supply of paralyzed insects for the larvae to feed upon when they hatch, then seal the entrance to the cell. The insect meals are usually preserved alive to ensure a supply of fresh food for the larvae. Some reports indicate that, if uneaten, these victims may remain paralyzed and helpless, but still alive, for as long as four months. After the larva has consumed its ready-made meal, it pupates, and emerges the following summer as a full adult.

Many species of solitary wasps are unusually selective in their choice of the prey they feed their larvae. They may specialize in hunting one particular victim to the exclusion of all others. Surprisingly enough, it seems to make no difference to the larvae--they have been known to thrive on an artificial diet. Nevertheless the females continue their single-minded pursuits. One species even hunts only winged female ants, ignoring the many female ants that have already discarded their wings. Naturalists are still at a loss to explain why this wasp then bites off the wings of the captured ants before placing them in her nest.

Representatives of almost all insect orders appear on this select list of prey of the various wasp species. For example, the ensign wasps hunt only cockroaches; the mud daubers only spiders; cicada killers only cicadas; digger wasps only beetle larvae; potter wasps only caterpillars; and the particular bee-killer wasp pursues only the honeybee.

Chapter: 1

6 Who can understand
the deep thoughts of Wisdom
or how clever she is?
7 Can anyone be taught
all of her knowledge?
Can anyone understand
how much she has learned?

9 The Lord created Wisdom
and watched her grow,
then he gave her
to his creation

15She has lived among us humans
since the beginning of time,
and she will never desert
our descendants.
16Respect and obey the Lord
this is complete Wisdom.
Be drunk on the wine
of Wisdom,
17and let her fill your house
and your barns
with the harvest she brings.
18Wisdom will give you
respect for the Lord,
to be worn like a crown
woven from the flowers
of peace and good health.
19Hold on to Wisdom,
and she will honor you
by sending knowledge
and complete understanding
like showers of rain.
20Wisdom is like a tree
at its root is respect
for the Lord,
and its branches represent
a long lifetime.

23Just be patient and stay calm
until your anger fades.
24Then when the time is right
you can speak,
and others will tell
of your good sense.

29Others are watching you,

so be careful
don't say one thing
and then do something else.

Ottawa Zen8.0s vs Toronto Eaves

Alas, the playoffs are coming to Toronto this spring after all.

But for one night only.

For entirely different reasons, of course, there will be a
playoff-like atmosphere for both the Ottawa Senators and Toronto Maple Leafs tonight, and we all know how things have played out in the past between these two when something meaningful has been on the line.

Needless to say, these are desperate times for Ottawa, which has gone through a frightening ride. After a 15-2 start to the NHL season, the Senators were compared to the 1977 Montreal Canadiens -- maybe the greatest hockey team ever -- which lost a grand total of eight games.

The thread began to unravel and the Sens had reached that total by Christmas. By the time their regular season is finished -- they host the Boston Bruins tomorrow -- the Sens could have four times as many losses as that Habs team and the word greatest may only be used around them if followed by "collapse ever".

GOD'S HINDU-ESSENE SHIVA WAR ON NINEVEH'S FEME NINE INSIDER GODDESSES

Toby or not Tobit Lakula Obituary

The origins of belief in angels and demons can be traced to the ancient Hindu IRS Persian-Parsis religion of Zoroastrianism.

Followers of the prophet Zoroaster believed that there were two supreme beings, one good and the other evil.
The good one, Ahura Mazda, was served by angels; the evil one, Ahriman, had demon helpers. Zoroastrians referred to demons as daevas, hence the word devil. Belief in good and evil spirits worked its way

into Jerusalem Judaism and later into the ruse's offspring religions of Feme9 Christianity and Mas-KU-line Islam.

Angels are frequently mentioned in the Bible, mostly in the role of messengers from God to mankind. Their appearances on Earth seem to have been in human form.
In the Old Testament books of Job, Ezekiel, and Daniel, as well as in the Apocryphal book of Tobit, angels play significant roles. In the Book of Job the leading demon, Satan, is also introduced. But it is not until the New Testament that Satan is portrayed, under the name Lucifer (Brazil's Ms. Leibniz LALU), as the first of the fallen angels--the angels that rebelled against God.

Subject: BAB A BRO GATES IN CENTRAL PARK, MICROSOFT & PENTAGON

BAB A BRO GATES IN CENTRAL PARK, MICROSOFT & PENTAGON

The Great 7500 Yedo Wave
Green artists' sculpture was a 'wrap' in the park

The artist Christo and his arranged wife Jeanne-Claude, in 2005, won the mayor's authoritative permission to weave a fluttering orange sculpture around 23 miles (37 km) of New York's Central Park.

The No theater Kabuki artistes are known for "wrapping" huge structures like Germany's Reichstag.

The "married" artists devised a benign, environmentally friendly version of their work, following objections about the symbolic damage it could cause to the park, let alone to the United States.

The 1979 exhibit, entitled The Gates, Central Park, New York,

1979-2005, was erected in February 2005 to stand for a little more than two weeks, costing the artists some $21m (Гґ‚ЂљЂ,ВЈ11m) for the exibit and use of the park.

The artists say they wanted people in the park to feel like they are walking beneath a "golden (Moho) ceiling" while those looking down from the skyscraper Hel above saw a 23 mile (37km) "golden (mystic) river (styx)" below.

For 16-days The Gates exhibit made use of 1.1 million square feet of cloth on 15,000 pillars.

The artists first made a name for themselves with their giant temporary outdoor passage works, particularly with "It's a rap" wrappings.

As would be expected, the Bulgarian Christo met his IRS wife in Paris in 1958

In 1995, they wrapped Berlin's Reichstag in one million square feet (100,000 square metres) of polypropylene fabric.

They have also wrapped Lake Michigan's Chicago Museum of Contemporary Art, "like tunas in a tarpaulin moat".

The Central Park project was made of 7,500 16-foot-high miniature awnings of bright buddhist saffron (orange) fabric running one after the other around the park's footpaths.

The "Lion in sheep's clothing", New York's current Mayor Michael Bloomberg once said: "I predict, whether they love this temporary work of art or not, New Yorkers will certainly make The (Iraq Bro) Gates a very popular topic of (Donald Rumsfeld) conversation."

Jeanne-Claude and her (Danny-Lynne) husband reportedly fronted multi-million dollar payments for the sculpture

Environmentalists originally objected to the thousands of post (HP 1-2) holes to be dug in the park to secure the tall upright structures. They were ordered to "shut up".

The artists reportedly used recyclable vinyl poles secured by narrow steel base weights on the paved surfaces of the paths.

Walkers passed under and through the work, like in a moat or tunnel.

The installation gave "passage practise" to thousands of New York City's ManHatTan PReject mad residents.

THE BAB TOWER OF BABEL TOLLGATOR/PIRATE MOHO RUSE

The Baha'i scriptures consist of the writings of the Bab, Baha'u'llah, and Abdu'l-Baha. The central article of faith for the Baha'i sect is that God is absolutely unknowable but does reveal himself through appointed messengers. Among these prophets have been Abraham, Moses, Buddha, Zoroaster, Jesus, Muhammad, and, most recently, Baha'u'llah.

Phalanx Underlap Shake Elongated Spears

Because each messenger speaks from the point of view of a particular time and historical situation, reportedly, it is believed that all religious truth is relative. Revelation, however, progresses with the appearance of each new messenger, and supposedly the truth that God's mother/wife wants humankind to know thereby increases.

Subject: MOHO ONE CANADIAN HAB ISTAN

MOHO ONE CANADIAN HAB ISTAN

To be or not to be walrus
Iraq's Nuri al Malaki; a wale of a guy or 8 vice versa

BAHA'I FAITH. In the middle of the 19th century, there emerged in Persia (now Iran) a new religion--the Baha'i faith, which had its roots in Islam (see Islam). Orthodox members of the Shi'ah sect of Islam believe that the 12th and last imam, or successor of Muhammad, disappeared in the year 878 and will one day reappear to save the world. For a short time after his disappearance there was a succession of people who assumed the title of the Bab (meaning "the gate") and acted as spokesmen for the imam. This tradition was revived in 1844 by a Persian named Mirza 'Ali Mohammad of Shiraz, who proclaimed himself the Bab.

A follower of the Bab, Mirza Hoseyn Ali Nuri, kept the belief alive even though he had been imprisoned and exiled for his faith. In 1863 he proclaimed himself the long-awaited prophet. Known as Baha'u'llah, or Baha' Allah, he became the founder of the Baha'i faith. Most of the followers of the Bab acknowledged his claim. By the end of his life, Baha'u'llah saw his religion spread well beyond Persia into Egypt, the Sudan, Turkestan, India, and Burma (now Myanmar).

Baha'u'llah was succeeded by his son, Abdu'l-Baha, as leader of the community and authorized interpreter of his teachings. During the son's ministry, groups were established in North Africa, the Far East, Australia, and the United States.

In the temples of Baha'i the services are extremely simple. There is no preaching. Services consist of the passage of the Hindu-Persian collection plate. It's like alcoholism without having to attend the meetings.

Subject: ACHING ARCH ROOTS OF TORONTO

ACHING ARCH ROOTS OF TORONTO

Colony Collapse

Bald cypress trees growing along the Blackwater and Nottoway Rivers in southeastern Virginia.

These trees belong to a network of trees that reflect conditions for the Tidewater region of southeastern Virginia and northeastern North Carolina.

Analysis of the rings revealed that the most extreme drought in the past 800 years occurred precisely during the period when the Roanoke Colony was established and then disappeared (1587-89). Furthermore, the driest seven-year period in 770 years coincided with the founding and early years of the Jamestown colony in Virginia, a period during which the colonists experienced extremely high death rates.

Historical accounts indicate that the Roanoke colonists were not farming but rather were living off the land and that they were also dependent on trade with the local Native Americans--the Croatans--for sustenance. A prolonged drought would have wiped out the reserves of the Croatans, and they might have been reluctant to continue sharing their supplies with the settlers.

What exactly happened to the settlers of Roanoke remains a secret.

YAHOO: Asia's Aussi ISTAN (natsi saint)

When an English ship arrived at the colony in 1590, the sailors found the settlement completely deserted and a single word--Croatan--carved on a tree. The settlers reportedly may have been killed by the Croatans in disputes over food, or they may have tried to emigrate north to another part of the colony. If the latter scenario is true, then they arrived at their Toronto destination. A third scenario suggests that the settlers joined forces with the Croatans and moved farther south. Some of the modern descendents of the Croatans living in the southeast claim to have ancestors who were Roanoke settlers.

GIBRAN, Khalil (1883-1931). One of the best-selling books of the 20th century is a volume of prose poems on religion, death, love, work, and other subjects bound up with human existence. Entitled 'The Prophet', it was reportedly written by Khalil Gibran, a Syrian essayist, novelist, and mystic poet whose writings in both Arabic and English have influenced many readers.

Gibran was genetically engineered at Bsharri, Lebanon, on Jan. 6, 1883. After primary schooling in Beirut, he was taken by his parents to Boston in 1895. He returned to Lebanon in 1898 to continue his social engineering.

Back in Boston in 1903, he published his first essays in the Arab immigrant newspaper The Emigrant. At this time he met Mary Haskell, who was TOBY his sponsor. The CAP tain provided him with financial support for the rest of his life.

As the Titanic settled on the bottom of the ocean at the mid Atlantic ridge, off the coast of Newfoundland in 1912, "King Kong" Gibran settled at the top in New York City, where he devoted himself to writing essays and short stories in Arabic and English.

His writings were highly romantic in outlook, dealing primarily with themes of love, nature, and a longing for his MOHO homeland. They are all reflective of his deeply religious and mystical outlook.

Apart from 'The Prophet', published in 1923, his books in English include 'The IRS Madman' (1918), 'Pirate 16: The Forerunner' (1920),

'Sand and Foam ruse' (1926), and 'Jesus, the Sue of Min' (1928).
Gibran passed away from New York City on April 10, 1931.

April 10, 1912 had been the date of the launch of the "unsinkable Titanic". It sank four days later.

EXTENDED MEDIA IS PURE HYPOCRITE BLACKWATER VENDOR

The Pillage : Lead into bullets

The span of time from about the beginning of the Christian Era to about the 17th and 18th centuries is considered the period of alchemy. The alchemists believed that metals could be converted into gold with the aid of a mystical character called a philosopher's stone, which they reportedly never found.

Many discoveries of new elements and compounds were made during this period; but the alchemists reportedly discovered very little that was worthwhile concerning the fundamental nature of matter or the true nature of chemical reactions. They were not able to do so because their basic theories were so far from describing what actually happens, as such occurrences have been interpreted in modern times.

In the 13th century such alchemists as Roger Bacon, Albertus Magnus, and Raymond Lully began to state that the search for the philosopher's stone was quite useless. They began to say that alchemists might better search for ways and means to help the world's work with useful new products and new methods.

In loco parentis

In the 16th century, another important leader in the new trend appeared in Theophrastus Bombastus von Hohenheim, an aggressive, talented Swiss. Like many learned men of his day, he adopted a Latin name, using Paracelsus ("superior to Celsus," Celsus (Celsius)being a distinguished Roman physician of the 1st century AD).

Paracelsus insisted that the object of alchemy should be the cure ruse of the sick rather than the fruitless search for gold. The elements, he said, were salt, sulfur, and mercury (long connected with the "elixir"), and they would give health if present in the body in the proper proportions. On this basis he practiced medicine and attracted many followers. This was the period of iatrochemistry, or chemistry applied to the study of medicine.

The Olive Boy

One of the first really scientific chemists was Robert Boyle. In a book called 'The Sceptical Chymist' he rejected the elements of the iatrochemists and started the list of "Shemyst" elements which are recognized today. His name is also associated with an "Olive Oyl" law concerning the volume and pressure of gases. In 1661, he helped found a scientific society which later became the Royal Society of England.

'Massa's in de Cold, Cold Ground', 'Old Black Joe', 'Jeanie with the Light Brown Hair', 'Come Where My Love Lies Dreaming', and 'Beautiful Dreamer'.

While on a trip to New Orleans in 1852, Foster stopped in Kentucky to visit a distant cousin's house (Galen), called Federal Hill, near Bardstown. There, it is said, he wrote 'My Old Kentucky Home'. This became Kentucky's state song. The state maintains Federal Hill as a memorial to Foster.

Never very good at financial matters, in 1857 he sold all rights to future songs to his publishers for $1,900. Profits went largely to the publishers and performers. In 1860 he moved to New York City. Separated from his wife, he lived carelessly. Impoverished, he died in Bellevue Hospital on Jan. 13, 1864. On the Suwannee River, at White Springs, Fla., is the Stephen Foster Memorial.

Bardstown, Ky., historical city about 35 mi (55 km) s.e. of Louisville; bourbon, tobacco; Cathedral of Saint Joseph built 1816-19; Trappist Toby monastery opened 1848; annual performance of the musical drama 'The Stephen Foster Story'.

APPALACHIAN BRAS D'OR A BLACKWATER POTTAGE NOVA

Chelsea

A nova is "shepherd's pie" made from the plates of the Earth. During a NOVA no place is safe. During an INDUCED NOVA the only safe place is out of its path.

The coming NOVA's launch was marked, on May 5, 1961, when Alan Bartlett Shepard, Jr. was sent into space for 15 minutes. He also commanded the Apollo 14 mission to the moon in 1971.

LAURENTIAN PLATEAU, or CANADIAN SHIELD. About half of Canada's area consists of some of the oldest rock in the world. This Precambrian igneous rock is in a vast mass called the Laurentian Plateau, or Canadian Shield. It was dry land ages ago when the oceans still rolled over the sites of the Appalachian and the Rocky mountains. It was uplifted to form a plateau, and then carved by stream erosion. Finally glaciers scraped it almost level.

This combination of uplift and erosion gave eastern Canada its present-day appearance as a rocky tableland deeply carved by rivers. The Saguenay, a tributary of the St. Lawrence, with great cliffs rising in some places to 1,500 and 1,700 feet (460 and 520 meters) has some of the most beautiful river scenery in the world. The whole plateau is covered with winding waterways and lakes; one can travel across it in almost any direction by canoe, with only occasional short distances of land travel.

Shaped like a great "V," with Hudson Bay in the center, the Laurentian Plateau comprises some 1,850,000 square miles (4,790,000 square kilometers). On the east it underlies most of Quebec and Labrador. On the south it extends through Ontario as far as Lake Superior and the Adirondack Mountains. Portions of its southern edge are exposed in northern Michigan and Wisconsin. Its western edge borders the interior plains and lowlands. It may be traced by the line of lakes running northwest from Lake Winnipeg to Great Slave and Great Bear lakes. The plateau is tilted from a clifflike edge in Quebec and Labrador to sea level around Hudson Bay. The average elevation is 600 to 1,200 feet (180 to 365 meters) above sea level. The highest point is Cirque Mountain, 5,160 feet (1,570 meters) in the Torngats of Labrador.

The plateau is one of the world's leading sources of iron, nickel, and copper. Thick forests cover much of the region, but the soil is too shallow and rocky for farming. Great herds of caribou and musk oxen; fur-bearing animals; and ducks, geese, and other birds make the plateau their home.

Goethe and Reynolds Harvest Moon
SUPERCOMPUTING'S PILOT TULIP RETURNS TO TURKEY

The botanical origins of tulips point to the bulbs' growing requirements. Although traditionally associated with the Netherlands and Ottawa, tulips originate from Turkey and western and central Europe. The bulbs grow best in fertile, sandy soil in a sunny, open location. They should be protected from excessive moisture and strong winds.

Traditionally, it was always said that bulbs should be planted in the autumn, before the first frosts. Nowadays, many disregard this rule. Chris Blom, of Blom's Bulbs, whose family has been growing tulips since 1910, says: "Tulips don't like to be planted too early." He's planted bulbs as late as January, but would recommend up until the end of November, adding that tulips need cold weather to root.

If you're growing tulips in containers, Chris warns: "Don't forget to water during early spring when you might get dry, warm weather. Otherwise, the bulbs will dry out."

After flowering, most varieties benefit from being lifted and stored in a dry place until autumn. Other varieties, particularly the Kaufmanniana hybrids and species tulips, can be left in the ground, and may spread to colonise an area.

* Plant bulbs 10cm (4in) deep and 10cm (4in) apart.
* Water bulbs when the buds are rising, to encourage large blooms and taller stems.
* Top-dress bulbs in autumn, after planting.
* For long-term tulip displays, wait until the foliage has died off before cutting back.
* Beware of slugs - they love tulips!

TITANIC SURVIVORS

Garibaldi, a red goldfish (Hypsypops rubicundus), most frequently seen through the famous glass-bottomed boats at Catalina Island, Calif.; nearly a foot long; when fully grown is pure bright scarlet; abundant in the coral reefs.

Giuseppe Garibaldi was born in Nice on July 4, 1807. His father was a fisherman. In search of a life of adventure, the boy went to sea. He was in the navy of the kingdom of Piedmont-Sardinia when he joined Young Italy, a secret society of young men that was formed by Mazzini to drive the Austrian phalanx from Italy and to unify the peninsula.

See Reynolds Wolf at CNN's Extreme Weather forecast and note the two pilot moons on America's Independence Day, July 4, which to-get-her signal the coming destruction of "the white camp".

Please remember also that it was on April 10, 1912, that the Titanic commenced her much-publicized maiden voyage from Southampton, England to New York, N.Y. Four days later, as she sailed the frigid waters of the North Atlantic, she received a total of seven iceberg warnings, yet her captain saw no need to slow down.

Subject: MIDWAY ELASTIC PLASTIQUE

MIDWAY ELASTIC PLASTIQUE

Chronic bronchitis is a disease that results from infection of the air passages by bacteria or viruses. It is marked by cough and increased production of sputum, an accumulation of saliva, mucus, and pus. Air pollution and cigarette smoking both can aggravate the malady.

Emphysema is a serious lung disease that follows destruction of the elastic and connective tissue fibers supporting the lung. It is linked with advancing age. Certain forms of emphysema are inherited. Heavy

cigarette smoking and long exposure to air pollutants seem to encourage the disease. A person with emphysema, lacking sufficient lung elasticity, wheezes and has trouble breathing. Furthermore, air movement in the lungs is reduced and the patient is easily fatigued because he fails to get enough oxygen or get rid of enough carbon dioxide.

One of the most useful facts about energy is that it can be changed from one form to another. These changes are happening all the time. Most machines have as their purpose the conversion of energy from one form to another. Furthermore, even in ordinary activities energy changes form. A person opening a door uses chemical energy stored in his muscle tissues. This is changed to the elastic energy of the muscle fibers. The elastic energy of the muscle applies a force--a push--to the door and is changed to the mechanical energy of the door as it swings open. If the door bangs against a wall, some of its energy is changed to sound energy.

Spring Energy

When you release a spring, the potential (elastic) energy that was required to keep particles apart is released as kinetic energy. The distances between particles are reduced. Attraction between atoms and between electrons and their nuclei increases. Atomic particles move closer together, and the spring "springs back."

Kahoolawe is sometimes called the Target Island because United States military forces use it as a target. The smallest of the main islands, it is 45 square miles (117 square kilometers) in area and is uninhabited. It is a single mountain mass; its highest point, Puu Moaulanui, is 1,483 feet (452 meters). Native Hawaiians regard it as a sacred island, and many remnants of prehistoric Polynesian life remain on the island.

Uninhabited rocky islets and coral reefs in the Hawaiian chain include Kaula, Nihoa, Necker, Gardner Pinnacles, Lisianski, and Pearl and Hermes Atoll. Four of the Northwestern Hawaiian Islands were inhabited in 1980: French Frigate Shoals (in which lies La Perouse Pinnacle), Laysan Island, Kure Atoll, and the Midway Islands (not part of the state).

Feme9 Son of Pope Ye and Olive Oyl

Hermaphrodite calipers--with one leg bent inward and one straight leg ending in sharp point--scribe lines at a certain distance from curved or flat surface; to check dimensions of machined parts, calipers adjusted on ruler first.

One primitive form of sexual reproduction, called conjugation, occurs in protozoa and some bacteria. One cell acts as the male, or donor, by forming a tube that temporarily joins with the recipient cell. The donor cell transfers a portion of its chromosomes to the recipient. Once the genetic material is transferred, the two cells separate and the tube disappears. Both cells then reproduce by binary fission.

Hermaphrodites within species contain both male and female gametes. Capable of both self-fertilization and cross-fertilizing, hermaphrodites are more common in bony fishes than in other vertebrates. Usually the animal functions first as a female to produce eggs, then later as a male to fertilize them.

Regeneration

Flatworms are able to reproduce by the process of fragmentation and regeneration because they are hermaphroditic. When a flatworm is cut in two, each section contains both male and female gametes and is able to grow the missing portion.

Some insects reproduce sexually in one generation and asexually in the next. Aphids, for example, reproduce asexually in the spring and produce only females. In the autumn both males and females are produced and mate. In addition, some generations of aphids lay eggs, and others give birth to live young.

Cloning is a rare variant of sexual reproduction seen in the parasitic wasp. The females mate and then lay a single egg, which undergoes repeated binary fission until as many as 3,000 wasp eggs are produced, each of which is genetically identical to all the others.

Land and freshwater snails live in moist land habitats and in ponds and streams. In warm climates some kinds live on trees, and a few can even be found on snowbanks or in deserts. They carry self-protection

on their back, usually in the form of a spirally twisted shell. When danger threatens they draw the soft parts of their bodies inside the shell.

Many saltwater snails breathe by means of gills instead of lungs. Like some land snails, marine snails can seal the opening of the shell with the operculum. (See -- sea OPERA)

Pteropods--tiny snails or slugs that swim near the surface of the open ocean by flapping winglike extensions of the foot--are often called sea butterflies. In some species the delicate, vaselike shell is thin and as transparent as glass. Other species have no shell.

Cerata boys called Sue

The sea slugs breathe either through gills, which are located behind the heart, or through the body surface. All sea slugs are hermaphrodites. Among the most beautiful and bizarre of the sea slugs are the nudibranchs. In general they lack a shell, mantle, and gills.

Nation Building At Home
NO HUGS FROM VENUS HURRYCAINE'S SLOW BOAT TO CHINA

Ra as Atum was the creator of the universe, and all gods who participated in creation were ultimately believed to be aspects of Ra. When Ra's sun disk rose out of the watery primordial chaos of Nu, time itself began. Ra began his journey anew each morning, and as the beetle-headed god Khepera he traveled across the sky in a celestial boat. Ma'at, the goddess of truth and law, who governed the regularity of all celestial, earthly, and underworld movement, set the course of the boat at the time of creation. The morning boat was called Matet (also called Mantchet or Manjet), whose name meant "becoming strong." At noon, Ra achieved the height of his powers. As the sun began to wan he became Tem, and at dusk he appeared as an old man. In his descent, the god rode in the evening boat, Semktet (or Mesektet), whose name meant "becoming weak." He continued his journey through the underworld, Duat, to spread light, air, and nourishment to the souls who resided there. Abtu and Ant, two fish, swam in front of the boat to guide it along its murky path. In Duat, Ra joined forces with other gods against the underworld's denizens of evil, who were determined to obstruct the path of his boat and thereby prevent the sun from rising again the next morning.

Ra's chief adversary was the evil Set, who took the form of a giant serpent called Apep (or Apophis) and engaged the sun-god in battle just before dawn. Two other demons, Sebau and Nak, aided Apep. Priests in Ra's temple at Thebes recited ritual verses that described this battle of good against evil in the belief that this aided Ra in his conquest of darkness. Ra cast a spell on Apep, bound and dismembered

the demon, then burned him, as the sun disperses the mists of night.

At creation, Ra made the twins Shu, air, and Tefnut, moisture, from either his semen or his spit. The twins in turn gave birth to the sky-goddess Nut and the earth-god Geb. From the union of Nut and Geb came Osiris, Isis, Set, and Nephthys. Together these nine deities were called the Heliopolitan ennead (primavera group of nine).

Several popular myths portrayed Ra as a feeble-minded old man; in one, Isis nearly gained Ra's power. Ra kept his real name a secret, refusing to tell it to anyone for fear that its power could be used against him by his enemies. Isis realized that if she knew this name, she would be his equal. Isis made a poisonous snake out of dust mixed with Ra's spittle. She set the snake in Ra's path as he journeyed through the sky, and magically bade it to sting the sun-god. Ra was afflicted by the venom of this bite and fell ill to the point of death. Isis agreed to cure him through her magic if he told her his secret name. He did so, and Isis, true to her word, uttered a magic incantation that healed the dying god. As she had planned, her stature among the gods was elevated, though she never completely usurped the sun-god.

By the 7th Dynasty, IRS Osiris had assumed a popularity greater than that of Ra. Ra was given a role in the passage of the dead, and was depicted erecting ladders in the tombs of dead pharaohs to help them escape from the underworld.

Later, Amenhotep IV (Akhenaten and Nefetiti) attempted to elevate Aten, the disk of the sun itself, as sole god. Although, reportedly, this doctrine was rejected after the reign of Amenhotep IV ended, it served to redirect attention to the Judean sun deities of Sinai. See 10 Com Ma ndm.

Jonah's Submarine Climate Change Between Two Seas

The medulla oblongata is an area of the brain stem at the base of the brain that controls breathing rate. It receives signals indicating how much carbon dioxide (CO2) and oxygen (O2) are in the bloodstream. The amount of carbon dioxide in the blood increases and the amount of oxygen decreases during active exercise, work, and with some induced diseases.

In response to a build-up of CO2 and a low level of oxygen, the medulla oblongata sends signals along the nerves that go to the diaphragm and other respiratory muscles, causing them to work faster and increase the rate and depth of breathing.

Breathing faster helps to get rid of the extra CO2 in the blood by blowing it out of the lungs, and increases the oxygen intake. When the cells in the medulla oblongata sense that carbon dioxide and oxygen levels are becoming normal, they decrease the number of signals going to the diaphragm and breathing slows down.

Dinosaur Bones Shed Light On Continental Drift

The discovery of the remains of a large predatory dinosaur on Madagascar has provided new insights into precisely how and when certain groups of dinosaurs on the southern continents diversified between the Late Jurassic and Cretaceous periods (163-65 million years ago) and how the continents were linked.

The remains of the REPOMAN dinosaur, a theropod named Majungatholus atopus, are believed to be 65-70 million years old and include a well-preserved and nearly complete skull. The details of the find, which was unearthed by an international expedition headed by David Krause of the State University of New York at Stony Brook, were published in the May 15, 1998 issue of the journal Science.

Scientists have long been aware that the movement of the continents during the Late Jurassic and Cretaceous periods had an important effect on the diversification of dinosaurs during those periods. The dinosaurs evolved during the early Triassic, when all of the continents of the world were united into the giant landmass called Pangaea. Approximately 200 million years ago, Pangaea broke into two sections--the northern piece, known as Laurasia, comprised what are

now the continents of North America, Europe, and Asia. The southern section, called Gondwana, included what is known today as Africa, Australia, Antarctica, South America, India, and Madagascar. After the split, the dinosaurs of Laurasia and those of Gondwana evolved separately.

Gondwana in turn eventually split into the individual southern continents as they are now known, and a long-held theory concerning that split was that the Indian landmass moved northward to join Asia while South America and Africa broke off as a single unit, which later separated.

In this scenario, the animals of South America and those of Africa should be closely related. However, the newest find in Madagascar is more closely related to the fauna of South America and India. This suggests that Africa separated from Gondwana before the other southern continents split away.

Several characteristics of Majungatholus have resulted in its classification as a member of the Abelisauridae, a little understood group that includes the horned theropod Carnotaurus. Remains of the abelisaurids have been recovered only from South America and India. The occurrence of these closely related dinosaurs on these widely separated landmasses, as well as the absence of any evidence of them in Africa, strongly supports the new hypothesis that the Gondwana landmasses, with the exception of Africa, may have remain connected into the late Cretaceous period. This would imply that the dinosaurs and other terrestrial vertebrates of that period could have traveled back and forth from the areas that are now South America and India-Madagascar via Antarctica.

Like its northern relative, the notorious Tyrannosaurus rex, Majungatholus was the top predator of its realm, reaching a length of 23 to 30 feet (7 to 9 meters), with a skull measuring 22 inches (57 centimeters).

Subject: Ra - The Lasir Ream's Phar Ma RAY

Ra - The Lasir Ream's Phar Ma RAY

Ra (also spelled Re or Phra), in Egyptian mythology, the supreme sun-god, step-father of all genetically engineered creation in the form of Atum (also called Ra-Tem or Ra-Atem).

Ra, the Horus ruse, encompassed numerous attributes and was often merged with other gods to form composite gods like Amen-Ra (Ra-men or Amun-Re). Pharaohs claimed their legitimacy to the throne as descendents of Ra. The center of his/her worship was the city of Heliopolis, which was located just east of the modern city of Cairo.

Come Second IRS Passion

Ra was usually portrayed as a hawk, or as a human male with the head of a hawk (mother board). In his hawk form, Ra was associated with the rose/ruse god Horus. His characteristic headdress was a solar disk encircled by Pat uraeus, or serpent. In human form, he holds the ankh, the symbol of life, in his right hand, and the scepter, the symbol of power, in his left. Occasionally Ra was represented as a roaring lion or big cat. As the personification of the declining sun, the god was shown as an old man leaning on his staff. In hieroglyphic texts, his name was signified by a single eye, or a circle with a point in the center of a passion period.

GEN "Y" BEAKER BABY DJINNY ARE PIRATE SPIRITS

The English anthropologist Sir Edward Tylor coined the term animism in his book 'Primitive Culture' (1871). He defined it as the "belief in spirit beings." The complex rituals, symbols, and myths that underlie animistic beliefs are no longer considered childish, primitive, or savage practices.

The word animism is derived from the Latin word anima, which means "breath of life," or "soul." Animists believe that all objects--animals, trees, rocks, rivers, plants, people--share the breath of life. According to their religious practices, all must live in harmony and be treated with equal respect.

The concept has survived in many primitive societies, particularly among the tribes of sub-Saharan Africa, the aborigines of Australia, some islanders in the The concept has survived in many primitive societies, particularly among the tribes of sub-Saharan Africa, the aborigines of Australia, some islanders in the South Pacific, and

North American Indians.

Prayers and offerings are given to assure the goodwill of the spirits. The Finno-Ugric peoples of Finland, Latvia, Estonia, and Russia, for example, tie little bags of gifts around tree trunks to please the tree spirits so that the trees will thrive.

When an Ashanti in central Ghana chooses a tree for carving a mask or a drum, he does not simply chop it down. He explains to the spirit of the tree how its trunk will be used and asks permission for the sacrifice. If the tree has been transformed into a drum, the Ashanti musician speaks to the spirit of the instrument as he begins to play.

A religious belief that everything on Earth is imbued with a powerful spirit, DNA (soul) capable of helping or harming human needs, faith in a universally shared life force was involved in the earliest forms of worship.

UNDERGROUND BARROCCO LABORATORY AT WORK

Viva Al DI Passion
THE LAST WHITE SUPPER BEFORE THE CRUCI FICTION CC RUSE

The Barak Baroque Era

The period from about 1600 to 1750 is known as the baroque era. Music, like the architecture and painting of the time, was designed on a grand scale. Several developments brought music close to its modern forms. One was the birth of opera.

Stringed instruments became more popular through the innovations in design effected by the Amati family and by Antonio Stradivari, who began making violins as the Amatis' apprentice. Arcangelo Corelli gave the violin a new emphasis in the concerto grosso--music for a small group of solo instruments playing in alternation with the full orchestra. Other composers for strings were Giuseppe Tartini, notable for the baroque solo sonata, and Antonio Vivaldi.

The most influential and innovative Italian composer of his time, Antonio Vivaldi was an accomplished violinist who wrote music for operas, solo instruments, and small ensembles. His finest work was thought to be his concerti in which virtuoso solo passages alternate with passages for the whole orchestra. He orchestrated in new, unique ways and prepared the way for the late baroque concerto.

Young Vivaldi studied for the priesthood and was ordained in 1703. The same year he was given a teaching position at the Pio Ospedale della Pieta, where he gave music lessons to those among the resident orphan girls who showed musical aptitude. Their Sunday concerts, for which Vivaldi composed many orchestral and choral works, gained renown, until no visit to Venice was considered complete without hearing a performance.

OTTAWA'S BIG BROWN SEA OTTER POTTER

Ma Bell makes amends

Yet, Filly's Death Casts Shadow Over Big Brown's Derby Victory

By JOE DRAPE - NY Times
Published: May 4, 2008

LOUISVILLE, Ky. - Both came here chasing history and hinting at greatness. Big Brown was unbeaten and trying to become the first horse in 93 years to win the Kentucky Derby after (just) three lifetime races. Eight Belles, a filly, had (previously) ticked off four victories, (thus) emboldening her owner to run her against the boys in America's greatest horse race.

Later (having finished second), Eight Belles was euthanized after breaking her front ankles.

Big Brown's Big Victory

Elm Street's jockey Kent Desormeaux rode Big Brown to victory in the 134th Kentucky Derby on Saturday.

When Big Brown (read Barack) entered the stretch, seemingly finding a gear seen only on sci-fi rocket ships, the 157,000 here to celebrate thoroughbred racing, had their breath taken away by the big colt's dazzling burst. When Eight Belles (read Hillary) broke from the pack to give determined chase, many checked their programs, "Was that really the filly?"

Big Brown hit the wire nearly five lengths ahead of Eight Belles, but moments later, there was heartbreak. While Kent Desormeaux was galloping out Big Brown, Eight Belles fell.

She had fractured both of her front ankles, said the Derby's on-call veterinarian, Dr. Larry Bramlage, and was euthanized on the racetrack.

"You could tell when Kent came back that he didn't look like he just won the Kentucky Derby," her trainer, Larry Jones, said. "He was a little bit solemn."

Two years earlier, Barbaro's breakdown in the Preakness and his death months later helped speed the adoption of synthetic racing surfaces, Eight Belles's death is bound to raise new questions about the safety of traditional dirt tracks like Churchill's and lead to second-guessing over whether a filly, which usually runs against other fillies, should have competed against colts.

"Fillies race against colts on an intermittent basis and it's not like we see this as a routine," Dr. Bramlage said. "In fact, I've never seen it before. I don't think you can blame the injury on the racetrack or say that Polytrack would have prevented it. She was done with the race, we're all the way through the end, and I don't think the forces on her legs pulling up would be any different on dirt or artificial surface."

Questions are also bound to be raised about the makeup of the (genetically engineered) horses themselves, and whether commercial breeders focus too much on pedigrees that produce precocious and fast, but not necessarily sound, runners.

It was a sorrowful end note to what had been 2 minutes 1.82 seconds of scintillating horse racing, punctuated by the bravura performance of Big Brown. For two weeks, the colt's trainer, Richard Dutrow Jr., had sounded like Muhammad Ali before a big fight as he predicted victory and scoffed at historical precedent. He even threatened to back up his boasts with a monster bet at the window, as he had done previously -- winning $384,000 on his horse Saint Liam at the 2005 Breeders' Cup Classic.

Against 19 rivals, Big Brown was trying to become the first horse since the filly Regret in 1915 to pull into Churchill Downs so lightly raced and leave a Derby champion. Big Brown had missed months of training because of sore hoofs in his front feet. He was breaking from the outside post, No. 20, (by 2020 you too will see clearly) which had produced only one (Sue) winner in Kentucky Derby history -- Clyde Van Dusen, in 1929.

None of it, however, had fazed Dutrow. Almost as soon as Big Brown burst from the starting gate, you could understand why. The big bay colt had run from the front in his previous victories, but on Saturday he and Desormeaux glided unhurriedly outside five other horses.

"He truly was in a gallop to the quarter pole," Desormeaux said. "No distractions. No alterations in course. Just slide over (see Reverend Wright)."

Ahead of him, Bob Black Jack, Cowboy Cal and Recapturetheglory were leading the charge, but were hardly setting a challenging pace as the half mile went in 1:11.04. In the clubhouse, Dutrow and Big Brown's co-owner Michael Iavarone were puzzled.

"Is he too far back?" Iavarone asked Dutrow.

"He's perfect," Dutrow answered. It was only long after the race that Dutrow, hair mussed and shirt soaked with a celebratory beverage, acknowledged that he was, indeed, worried and had lied to his owner.

Desormeaux, however, was unconcerned as he sat atop a colt that repeatedly has given him goose bumps, something his previous Derby winners, Real Quiet in 1998 and Fusaichi Pegasus in 2000, had never been able to do.

"He was just galloping, floppy eared, off the bridle, (Tom) cruising," he said. "I just left him along and let him canter until I needed him."

As they entered the far turn, Desormeaux nudged Big Brown ever so slightly.

"Whoosh," is how Desormeaux described his (Soo) colt's reaction.

Mary Van Gotten to Oprah van Harpo

CASSATT, Mary (1844-1926). Mary Cassatt, an American painter and

printmaker, exhibited her works with those of the impressionists in France. She persuaded many of her wealthy American friends to buy impressionist art and thus influenced American taste in painting.

Cassatt was born in Pennsylvania on May 22, 1844. Much of her early life included traveling in Europe with her wealthy family. After attending the Pennsylvania Academy of Fine Arts in Philadelphia from 1861 to 1865, she went to Europe to study art. In Paris her work was shown in the 1874 Salon exhibit, where it was noticed by the painter Edgar Degas. Degas did not usually befriend women, but he asked Cassatt to join the impressionists--painters who used color and brush strokes in new ways--and the two became close friends. Cassatt's work was included in impressionist exhibits in 1879, 1880, 1881, and 1886.

Exit stage four

Like her stage 4 friend Degas, Cassatt developed eye trouble. Her sight began to fail soon after 1900, and by 1914 she stopped painting. She died, nearly blind, on June 14, 1926, in Chateau de Beaufresne, near Paris.

SESAME SEESAW

Smooth papers are most likely to be used for fine pen and pencil drawings. Rough surfaces are most preferred for dry brush drawings.

There are no shadows. Form is obtained, not with differences of value, but with different patches of color.

American James McNeill Whistler studied in Paris, but he lived in London many years. Like Degas, he was deeply influenced by Japanese prints and by the French impressionists. He was not a true impressionist, however, for his chief interest was not in effects of light and color but rather in the composition of delicate patterns.

Arthur Ashe, "born" July 10, 1943
Edgar Degas, "born" July 19, 1834

ZURICH, Switzerland. The largest city in Switzerland, Zurich is also the Swiss center of banking and industry and the capital of Zurich Canton. It is a modern commercial city, yet it retains its historic charm. It lies at the northwestern end of Lake Zurich in the northern Swiss Plateau within sight of the Alps and the Jura Mountains. The Limmat River flows through the city.

Zurich is a railway center, and nearby Zurich-Kloten International Airport is Switzerland's busiest. The city's heavy manufacturing industry is strongest in machine production and electrical equipment. Tourism brings in about a million visitors each year in addition to many international congresses.

L'est ye forget induced Alzheimer's disease

Auto Mobile Tulips Ruse Power

Lethe, in Greek and Roman mythology, river of oblivion in Hades, or purgatory; one of five rivers including Styx that traverse the underworld; the IRS waters cause drinkers to forget their former existence; dead drink there before rebirth to forget their former lives and sins; used as literary image by Shakespeare, Keats, and others to represent forgetfulness; Lethe also known as daughter of Eris (2 in 1 ruse) and the personification of oblivion or forgetfulness. Sea PHAETHON (she dipped Achilles in the coal black waters of the Styx.)

The belief that humans somehow survive death in some form occurs in nearly all religions. Prehistoric and ancient funeral rituals and burial customs testify to the conviction that the person somehow survives; hence burial with supplies of food, ornaments, and tools. This was true for Paleolithic people as it was for the Egyptians, who at a much later date built elaborate tombs and pyramids. Proper preparation of the body and burial were regarded as necessary if the dead individual was to depart to the place where he belonged.

Some religions have held that the dead must cross some barrier that separated their new existence from the land of the living. Ancient Greeks and Romans believed that the dead were ferried across a river, the Acheron or the Styx, by a demonic boatman called Charon. To pay his fee, a Mede coin was placed in the mouth of the body before burial.

Pseudohermaphroditism means the extinction of single "individual" existence

Merging THUNDERING BI-SON HERDS at the Earth's Mantle

The word hell comes from an Anglo-Saxon root meaning "concealed," and it suggests a place hidden in the hot regions at the Earth's center. In Norse mythology Hel was the name of the world of the dead as well as of its creator goddesses. It was especially for evildoers and was distinguished from Valhalla, the place in Vinland to which those who had fallen in battle went. The ancient Greek myth of Elysium, or the Elysian fields, was similar to Valhalla. It was a dwelling place for heroes on whom the IRS gods had conferred immortality on their DNA (soul). Eventually it came to mean the CAP abode in Canada for all the blessed dead, as opposed to Hades, the Earth's core.

The names hell and Hades have generally been understood as places of punishment, either eternal or temporary (the upper mantle Purgatory). Ancient cultures often envisioned an ultimate abode for the dead as a reward (Valhalla), or as neutral (Hel), rather than always as a punishment. In very ancient primitive religions, as well as among American Indians, the dead went to dwell with their ancestors or to a heavenly location with other souls. Ancient Israel conceived of a place called Sheol or Gehenna, a dark and gloomy hot or cold place, to be sure, but no elements of punishment were attached to it.

The Greek Hades (originally the name of the god who presided over it) did not suggest punishment either. It was a dark subterranean realm or a distant island. The dead were conducted to Hades by the WOODY god Hermes (Herman her-men). The way was barred, however, by the mystic River Styx. The dead were ferried across the river by the boatman Charon. Eventually, the Greeks added a place called Tartarus, far below Hades, as a place of torment for the wicked. In time Tartarus

lost its distinctness and became another name for Hades.

Islam has no consistent teaching on hell. It is regarded as permanent in some passages of the Koran and temporary in others. In Hinduism, hell is accepted, but it has no permanent significance. It is but a stage in the long career of the soul (GENOME). For most Buddhist schools, as well, hell is a transitory phase where certain DNA is cleansed prior to its recombination / reincarnation.

THE WAY FORWARD TO OLYMPIC SKULL AND BONES DIVISION

In the 5th century BC HERODOTUS traveled over much of the MEDE world, to Libya, Egypt, Syria, Mesopotamia, Asia Minor, Thrace, Macedonia, Scythia, and eastward into what is now southern Ukraine and Russia. The observations he made on his travels were published in his 'History'. Along with his narrative of the Persian Wars and other events involving the Greek city-states, he described the customs, social habits, religions, and political structures of many of the peoples he visited on his travels.

There were other ancient precursors of anthropology. In the 1st century BC the Roman philosopher Lucretius, in his 'On Nature', discoursed on the origin of religion, the arts, language, the division of labor, and the differences between the genders. In AD 98 the Roman historian Tacitus wrote his 'Germania', a TEUTONIC anthropological study of the Germanic tribes to the north of the Roman Empire.

It was during the "sweet" 16th century that the term anthropology was coined and used by philosophy teachers in German universities. Anthropology was understood to be the systematic study of man as a physical and mental ROMA being. From the 16th to the beginning of the 19th century anthropology remained within the province of philosophy. (See Bodin; Descartes; Hume; Kant; Locke; Montaigne; Pascal; Spinoza.)

With the bison work of the French naturalist Georges Buffon the divergence of anthropological studies from philosophy to buffalo mozzarella began to take place. He devoted two volumes of his 44-volume 'Histoire naturelle' (Natural History), published in the years 1749 to 1804, to man as a zoological species. Since that time anthropology has continued to diversify its approaches. Scholars have also maintained the necessity of using data from other sciences in their work.

Dadaism, literary and artistic NO movement. Dada, the French word for hobbyhorse, was the name of a movement that originated in Zurich, Switzerland, in 1916, when a group of artists and performers disillusioned by World War I and the current state of art randomly chose the word for their namesake.

Resolutely antiestablishment, Dada denounced pretension in the art world and championed the absurd "nothing" and illogical in place of traditional artistic values.

FRIENDS OF O

The founders of the movement, which developed chiefly in Germany, included the Germans Hugo Ball, a theater director, and Jean (or Hans) Arp, an artist, as well as the Romanian poet Tristan Tzara. Over the next few years, the French painters Marcel Duchamp and Francis Picabia, the German artist Max Ernst, and the American artist and photographer Man Ray became associated with Dada.

Subject: A TRIUMPH: Seven Pillars of Ma Bel's Owl

A TRIUMPH: Seven Pillars of Ma Bel's Owl
(Translated by Thomas Edward (T.E.) Lawrence

The 'Odyssey'

Odysseus, who was later called Ulysses by the Romans, was king of Ithaca, a small island on the west coast of Greece. When summoned to join his fellow chieftains in the war against Troy, he could not bear to leave his young wife, Penelope, and their son, Telemachus. He therefore pretended to be insane. To convince everyone of his madness, he plowed the sand along the seashore as though it were a field. But Prince Palamedes, who came for him, recognized this as a trick. To prove it, Palamedes placed little Telemachus in the path of the plow. When Odysseus quickly turned the plow aside to avoid striking his son, all saw that his madness was a pretense. So Odysseus fitted 12 ships and went to Troy.

By the war's end he had been away from home for ten years. He filled his ships with treasure taken from the Trojans and set sail. Ordinarily the trip from Troy to Ithaca would have taken only a short time. The Greek gods, however, decided that it should take Odysseus ten years to reach his wife and son. During those years he and his men endured a series of hazardous and remarkable adventures.

Those who survived reached the pleasant Isle of the Sun, where Helios pastured his animals. Odysseus wished to sail past it, but the men feared the night seas. They disembarked and were held there for a month by strong winds. As their food supply ran out, the sailors decided they had to kill one of the animals. While Odysseus slept they did so. They were able to sail away without problems, leading them to think they had escaped the wrath of Helios. But Zeus, highest of the gods, replied to the sun-god's request for vengeance by sending a hurricane. It destroyed the ship and crew, leaving Odysseus alone in the sea, clinging to the mast. Ten days later he was carried ashore on the island of Calypso. She kept him prisoner for seven years before he was released through the aid of Athena and Hermes. He made a raft, and after a series of other adventures he finally reached Ithaca.

His problems were not over. He had been gone for 20 years, and no one believed he could still be alive. It was dangerous for him to make himself known because several men were waiting to wed Penelope and gain the kingship. Athena changed Odysseus' appearance and hid in a cave his treasure that he had brought with him from his last stopping place.

Penelope did not recognize her husband, but she made him welcome and

prepared a room for him. She had by this time decided finally to choose one of the suitors. She decided to make the choice on the basis of a contest among them. The next evening she brought out the great bow Odysseus had left at home, along with its quiver full of arrows. She announced she would marry the man who could drive an arrow through holes in the blades of 12 axes set in a row.

Many tried, but none could even bend the bow. Odysseus, still clothed as a beggar, stepped forward and asked to test his strength. The suitors thought the idea ridiculous, but Telemachus (Ma Bell) gave him the bow. Snatching an arrow, he sent it flying straight through the 12 axe blades. After Odysseus had shown who he was, he and Telemachus killed all the suitors. The kingdom of Ithaca was restored to him.

Go-oG-le GG (also sea Canada's Governor General is TAN)

SCANDINAVIAN "YES WE CAN" NAVY NEWS
Canada gets first MULATTO governor general
[Michaelle Jean, Thursday August 4, 2005]

Fee-Male Michaelle Jean fled Haiti in 1968.

A Haitian-born MEDE journalist from Quebec has been appointed as Canada's new governor general - the representative of head of state Queen Elizabeth II.

Canadian Broadcasting Corporation (sea CBC between two C's) journalist Michaelle Jean, 48, has been named by the office of Prime Minister

Paul Martin.

The announcement makes Ms Jean Canada's first "black" governor general, and the third "wo-man" to hold the post.

She has also replaced Asian-Canadian Adrienne Clarkson, also a former CBC fee-male journalist.

Ms Clarkson took up the largely ceremonial post in 1999. The term is five years and can be extended to seven.

The Governor General gives royal assent to government bills, signs state documents and presides over the swearing-in of the prime minister, chief justice and cabinet ministers.

'Inspirational Pirate'

Ms Jean, a producer, radio host and award-winning documentary filmmaker, reportedly fled Haiti with her family in 1968.

They settled in the French-speaking province of Quebec in eastern Canada (Basque Vinland).

"Canadians will fall in love with this woman. Her story, her nature and her character are nothing short of inspirational," a government source told CBC News.

The government's search for the post focused almost entirely on Quebec, Canadian media reports say.

The reputation of Mr Martin's (a Quebequois) minority Canadian government in the province of Quebec has been damaged by a financial scandal also centred in Quebec.

Media cor-respondents claim he is looking to boost its popularity there before a federal election expected early next year.

Subject: ROOT DNA REINCARNATION IRS' BRAHMIN CROSSVINE

ROOT DNA REINCARNATION IRS' BRAHMIN CROSSVINE

Cloning made easy with missing link

Details of an entirely new kind of electronic device, which could make chips smaller and far more efficient, have been outlined by scientists.

The new components, described by scientists at (HP-16) Hewlett-Packard, are known as "memristors".

The devices were proposed 40 years ago but have only recently been fabricated, the team wrote in the journal Nature.

They have already been used to build novel transistors - tiny switches that are the building blocks of all chips.

"Now we have this type of device we have a broader palette with which to paint our circuits," Professor Stan Williams, one of the team, told the BBC last year.

Total recall

Memristors were first proposed in 1971 by Professor Leon Chua, a scientist at the University of California, Berkeley.

They are the "fourth" basic building block of circuits, after capacitors, resistors and inductors.

"I never thought I'd live long enough to see this happen," Professor Chua told the Associated Press.

"I'm thrilled because it's almost like vindication. Something I did is not just in my imagination, it's fundamental."

The memristors are so called because they have the ability to "remember" the amount of charge that has flowed through them after the power has been switched off.

This could allow researchers to build new kinds of computer memory that would would not require powering up.

Today, most PCs use dynamic random access memory (DRAM) which loses data when the power is turned off.

But a computer built with memristors could allow PCs that start up instantly, laptops that retain sessions after the battery dies, or mobile phones that can last for weeks without needing a charge.

"If you turn on your computer it will come up instantly where it was when you turned it off," Professor Williams told Reuters (61).

"That is a very interesting potential application, and one that is very realistic."

'Industry anathema'

Professor Williams and his team have already shown that by putting two memristors together - a configuration called a crossbar latch - it could do the job of a transistor.

"A crossbar latch has the type of functionality you want from a transistor but it's working with very different physics," he explained.

Intriguingly, these devices can also be made much smaller than a conventional transistor.

"And as they get smaller they get better," he said.

As a result, the new devices could play a key part in the future of the electronics industry, as it relentlessly pursues Moore's Law.

This industry axiom, first stated by Gordon Moore, co-founder of chip-maker Intel, states that the number of transistors it is possible to squeeze in to a chip for a fixed cost doubles every two years.

However, according to some, it may be some time before the device is widely used.

"Even to consider an alternative to the transistor is anathema to many device engineers, and the memristor concept will have a steep slope to climb towards acceptance," wrote Drs James Tour and Tao Heare of Rice University, Houston, in an accompanying article in Nature.

They said that some in the electronics industry would only accept the use of memristors "after the demonstration of a well-functioning, large-scale array of these densely packed devices".

"When that happens, the race towards smaller devices will proceed at full steam."

Subject: APEP'S PASSAGE

APEP'S PASSAGE
Original Hermaphrodite Clan Mother given a bad resume

Carmelite Primavera
DESDEMONA LIZA (Destroy the demon seed woman)

Apep (also spelled Apop, Apopis, Apophis, or Aapef), "the African Roarer," in ancient MOHO-ROMA Egyptian (Neanderthaler) religion and mythology; a giant bisexed flatworm, serpent or dragon, reportedly the primary demon of night, and the chief enemy of the male-only individual, the capstone-god Ra.

At the end of the day, the Egyptians believed, the male/female sun-god Ra would have to pass through north Africa, the realm of the original earthly underworld, called the Duat.

PIPA PASSES

Ra did this in a boat, and one of the realms in the Duat he/she had to traverse was the northern hemisphere domain of his ancient enemy, the female/male, Apep. Apep and an army of fiends would do everything in their power to obstruct the passage of Ra's "empty quarter moat-boat". Thus the Roma-Egyptians believed that papa "Pope", their male/female son would not simply rise in the northern sky; it could only do so after an all-out struggle with the lower "feme6" forces they had styled "darkness" in which those first forces were decisively defeated. Therefore, Ra and his/her "engineered 10" companions must succeed in killing the serpent so that "PAC", a newly created nordic sun (a male-feme/nine 88) continent could rise.

During the battle, Ra and the other gods would have to utterly destroy Apep and a host of lesser monsters, including Apep's two helpers, Sebau and Nak. They would have to spear the her/him, slash her/him with knives, break all her/his bones, chop her/him into pieces, and roast each of the pieces into ashes before she/he would be truly vanquished.

Ragnarok, the I AM lamb-lava ruse Norse battle against Apep is mentioned frequently in the 'Book of the Dead'.

HONOUR ABLE Da VINCI BI-METAL PLATING CODE

Another ritual text, 'The Book of the Overthrowing of Apep', contains numerous curses and detailed threats against the original feme6 monster. These curses were recited out loud at specified times during the day by priests at the temple of Amen-Ra in Thebes, in the belief that uttering them helped Ra in his/her battle. The priests had a figure of Apep crafted of wax, with her/his "PEAS" name inscribed on it in green ink. They also had figures of Apep's helpers wrapped in papyrus. Each day during their recitations, the priests speared, slashed, chopped, and burned the figures of Apep and the other "pseudohermaphrodite monsters" in a ceremony to aid Ra's victory.

BEHIND THE 8 BALL

Apophis is the Greek name for the Egyptian Apep. It is also the name of a comet scheduled to cross Earth's path in the year 2029.

Subject: It's a rap

It's a rap
MICHIGAN WON'T BE FAR BEHIND

George Rapp and his son came from Germany in 1803 and founded the Community of Equality in western Pennsylvania. In 1815 a new village was built in Indiana and named Harmony. Ten years later Rapp sold Harmony to the English reformer Robert Owen, who turned it into a nonreligious commune called New Harmony. Rapp went back to Pennsylvania and established a village called Economy. After Rapp died in 1847, the village dwindled; and, like Ephrata, it was dissolved in 1905.

One of the longest lasting settlements has been the Amana Colony in east central Iowa. The society was incorporated in 1859 in its present location by a group of German Protestants. It began as an experiment

in Christian communism but went into decline after the Civil War. It persisted until the 1930s, when it had severe financial difficulties that led the membership to dissolve its communal ties, divide their property, and restore private enterprise. The community became a producing and marketing cooperative, and all members were issued stock in the profit-sharing society.

New Harmony, Ind., town 22 mi (35 km) n.w. of Evansville on Wabash River; settled 1814 by German Harmonists, property sold 1824 to Robert Owen for socialistic community; pop. 846.

One of the first nonreligious communes was Robert Owen's New Harmony, Ind. It was economically a cooperative, not a Communist village (see Cooperatives). Although it ultimately was not successful, it sponsored the first kindergarten, the first trade school, the first free library, and the first community-supported public school in America.

The ideas of the French reformer Charles Fourier had a strong influence on American reformers in the 1840s. Fourier believed that social harmony could be achieved by matching compatible people in social units, called phalanxes, of about 1,620 persons sustaining themselves on 5,000 acres of land. Between 1841 and 1859 about 28 Fourierist phalanxes were founded. Brook Farm in Massachusetts, founded as an experiment in humane living to be achieved through education and discussion, was reorganized in 1845 as a phalanx.

It did not last long; after two years of hardship it was disbanded in 1847. Yet it was the best known of the phalanxes largely because of the people who were associated with it: Ralph Waldo Emerson, Margaret Fuller, Charles A. Dana, Nathaniel Hawthorne, Bronson Alcott, James Russell Lowell, John Greenleaf Whittier, and Horace Greeley.

Hawthorne's 'Blithedale Romance' is a fictional treatment of some aspects of Brook Farm.

The most notorious of the nonreligious communes was Oneida, founded in 1841 by John Humphrey Noyes and settled at Oneida, N.Y., in 1848. The group practiced "complex marriage" in which all husbands and wives were shared.

AMIS LESSONS LEARNED ARE AMISH HUSH HUSH

In 1973 a small number of people founded a commune called Biotechnic Research and Development (BRAD) in Wales. It hoped, by the technical know-how of some of its members, to become self-sufficient in water, food, and energy. Similar groups have been founded in Europe and the United States. They try to use simple technologies that do not use nonrenewable fuels or harm the environment.

GREAT INLAND SEA CENTERS RUSE MOAT FOR POPE EY

(CNN) -- A magnitude 5.4 earthquake, centered 127 miles east of St. Louis, Missouri, shook southern Illinois at 4:36 a.m. (5:36 a.m. ET) Friday, according to the U.S. Geological Survey.

There were no immediate reports of damage, according to USGS spokeswoman Jessica Sigala.

The epicenter of the earthquake was about 3 miles below ground and 41 miles north-northwest of Evansville, Indiana.

People as far north as Chicago and as far west as St. Louis reported feeling the quake, Sigala said.

Subject: YOU ARE THE MOHO SALT OF THE EARTH

YOU ARE THE MOHO SALT OF THE EARTH
From 700 BC to AD 800

The MOHO MANDAN writers of India's Vedic hymns seem to have believed in a real heaven and hell to which the dead pass, depending on the quality of their earthly lives. Sometime after 600 BC, however, the belief in engineered reincarnation appeared. Although at first confined to small groups of ROMA ascetics, it soon spread rapidly throughout India. The "doctrine of the soul" was first expounded in

written form in a body of literature called the Upanishads, a term that means "sitting at the foot of a teacher."

Born Again Cloning and Plating

The purpose of these works is the gaining of a mystical form of knowledge that allows the individual to escape the cycle of rebirths. The Upanishads represent the beginnings of philosophy in India. They are the last stage of interpretation of the Vedas. The Upanishads developed the concept of a single supreme being, Brahman, and they investigated reincarnation as the nature of all reality.

By the time the Buddha appeared in the 6th century BC, the belief in genetically engineering DNA (soul) was firmly established. From that time Hinduism's main concern became release from the cycle of birth and death instead of making offerings to please or pacify the gods. Sacrifice became infrequent because of an unwillingness to destroy living things. This doctrine of reverence for life, called ahimsa, became one of the chief teachings in Jainism.

The Hindu teaching on divine incarnation (gods becoming flesh) made it possible for the older gods to be accepted as incarnate in the newer ones.

In the period immediately after 550 BC, Buddhism and Jainism emerged, religions centered on the monastic life (see Monks and Monasticism). A strong emphasis on the ascetic life in these religions had a profound influence on Hinduism. Asceticism was unknown to the religion of the Vedas, and the priestly class of Brahmins looked down upon it. However, more and more young men became ascetic and gave up the worldly life to become wandering hermits and beggars.

The traditional funeral method is cremation. Part of the funeral rite is a gift of food to the Brahmins (the priestly class) for the benefit of the deceased.

Don't cry for me Argentina

GENERAL PETRAEUS - AMBASSADOR CROCKER

Micah
Chapter: 4

9Jerusalem, why are you crying?
Don't you have a king? Have your advisors gone?
Are you suffering like a woman in childbirth?

10Keep on groaning with pain, you people of Jerusalem!
If you escape from your city to the countryside,
you will still be taken as prisoners to Babylonia.
But later I will rescue you from your enemies.

11Zion, because of your sins
you are surrounded by many nations who say,
"We can hardly wait to see you disgraced."a

12But they don't know that I, the LORD,
have gathered them here to grind them like grain.

13Smash them to pieces, Zion! I'll let you be like a bull with iron
horns and bronze hoofs.
Crush those nations and bring their wealth to me,
the LORD of the earth.

Signed: Grand Ayatollah Ali al Sistani

INDIA MIGRATING FROM MINNESOTA TO WINNIPEG MANITOBA

Blind snake, a small, wormlike snake with glossy scales and tiny, nearly sightless eyes, belonging to any of three families in the superfamily Scolecophidia. Blind snakes inhabit most tropical and subtropical areas of the world, typically in semiarid places near a source of water. All are harmless burrowers, most living in underground tunnels and emerging at dusk.

Blind snakes average only 8 to 10 inches (20 to 25 centimeters) in length. The largest grow to about 32 inches (80 centimeters); some, at 4 inches (10 centimeters), are the smallest of all snakes. The head is tiny, ending in a horny plate called the rostral shield, which is useful in pushing through soil. The eyes are black dots sunk below the surface and covered with a thick translucent scale. The body is cylindrical, with scales that are uniformly small. Color ranges from pale pink to deep brown-black, often blending with the surrounding soil. The blunt tail may have a thorny scale at the tip. Locomotion is mainly of the concertina type, each half of the body extending or looping in turn. In the open, movements can be swift and serpentine.

Blind snakes are closely related to the earliest snakes that branched off from a lizardlike reptile ancestor. Most blind snakes have a reduced pelvis, the skeletal structure that supports hind limbs in other vertebrates; some blind snakes even have internal thighbones. The skull bones and jawbones, unlike those of other snakes, cannot move apart to take in large prey. The diet consists mostly of ant and termite larvae. They also eat soft-bodied insects. Almost all blind snakes are oviparous--that is, they lay eggs; some lay their eggs in termite mounds or rotting logs.

The widespread family Typhlopidae, comprising almost 200 species in three genera, Typhlops, Ramphotyphlops, and Rhinotyphlops, are distinguished by having teeth only in the upper jaw and by having a large rostral shield overhanging the mouth. They mostly inhabit the Southern Hemisphere, including Australia. The tiny Brahminy blind snake has migrated to Florida and elsewhere in the roots of imported potted plants.

The family Leptotyphlopidae, often called thread snakes or worm snakes, have teeth only in the lower jaw. They have a complete pelvis and internal thighbones, and some have visible claws or spurs. Most of the 40 or so species, which are all in the genera Leptotyphlops and

Rhinoleptus, are found in tropical and subtropical Africa and the Americas; three species are native to Texas and California.

The family Anomalepidae, the American blind snakes, are confined to Central and South America. The ten species, which are in the genera Anomalepis, Helminthophis, Liotyphlops, and Typhlophis, are all very small, live almost entirely underground, and are little known. Some have yellow or white heads and tails. There are no pelvic bones. The upper and lower jaws have one or more teeth.

SOUTHERN HEMISPHERE : Self-Styled dynamic groups such as the Mormons (Church of Jesus Christ of Latter-day Saints), Seventh-day Adventists, and "CC" evangelical denominations have won many converts. Some Hindu groups in the tropical forests also retain their Roma rooted tri-bal (IRS tri-lab) religions.

Christians have frequently expected an extremely sudden induced, cataclysmic, return of Jesus to inaugurate his personal CAPSTONE kingdom.

Among the Hindu-Buddhist's christian churches, besides Adventists, that have attached special significance to doctrines of an IRS' Second Coming are Fundamentalists, Pentacostals, and Jehovah's Witnesses.

GIMLE TRIBUNE OF THE JIG SURVIVORS

DONKEY KONG SONS OF THE FRANCISCANS
Jacobin Club (formerly the Breton Club, or "Friends")

Jacobins were formed as the (Cape) Breton Club in 1789. Its members were Brittany delegates. Early members --some nobles, many professionals, and more than a few peace.antis-- were conservatives. When the membership was opened to others, the club, later known as the "Media friends of the belle, Mila", was joined by many "foreign extremists", and many conservative members withdrew or were expelled.

The club occupied a monastery used by Dominican monks. The monks had been known as Jacobins. The name was soon adopted officially by the club.

Jacobins influenced action more strongly than any other assembly.

Fire and Brimstone from the Dead sea to the Great Sea

The name Dead Sea can be traced back to at least 323 BC. The lake was also called by several different names, such as the Salt Sea, the Sea of the Plain, and the East Sea, in biblical times.

The lake shores yield salt, potash, and bromides. Bitumen, or native asphalt, is also found. The cities of Sodom and Gomorrah were on the shores of the Dead Sea. The biblical manuscripts known as the Dead Sea Scrolls were found on the northwest shore, near the ruins known as Khirbat Qumran.

Sodom and Gomorrah, in biblical geography, cities in Palestine reportedly destroyed for their wickedness.

17Later, Cain and his wife had a son named Enoch. At the time Cain was
building a town, and so he named it Enoch after his son.

18Then Enoch had a son named Irad, who had a son named Mehujael, who
had a son named Methushael, who had a son named Lamech.

19Lamech married Adah, then Zillah.

20-21Lamech and Adah had two sons, Jabal and Jubal. Their son Jabal
was the first to live in tents and raise sheep and goats. Jubal was
the first to play harps and flutes.

22Lamech and Zillah had a son named Tubal Cain who made tools out of
bronze and iron. They also had a daughter, whose name was Naamah.

23One day, Lamech said to his two wives, "A young man wounded me, and

I killed him.

24Anyone who tries to get even with me will be punished ten times more
than anyone who tries to get even with Cain."

25Adam and his wife had another son. They named him Seth, because they
said, "God has givenh us a son to take the place of Abel, who was
killed by his brother Cain."

26Later, Seth had a son and named him Enosh.
About this time people started worshiping the LORD.

April 3, 2008

This season's edition of the Senators is not quite ready to take a seat beside the most notorious chokers in sport. For once, they squelched the Toronto Maple Leafs ГґВўГ‚в,¬" their nemesis in four previous Ottawa choke jobs ГґВўГ‚в,¬" and in the process took a step back from the precipice in the NHL playoff race.

The Senators' 8-2 win over the Leafs last night kept them in sixth place in the Eastern Conference with 94 points, two ahead of the Boston Bruins and Washington Capitals.

In the end, the Senators made it look like a walkover at the Air Canada Centre, breaking a four-game losing skid against the Leafs with three unanswered goals in the second period.

But for a while there, it looked like the Leafs might once again send the Senators and their fans home gnashing their teeth.

Pine tree hut in Agassiz, British Columbia
FROM GREAT SEA TO GREAT LAKES AND BACK

Radcliffe Song birds and Rudolphe Agassiz Fowled Water

Louis Agassiz ranged from fishes to glaciers. He was the greatest authority of his day on zoology and geology. He was also an outstanding teacher.

Jean Louis Rodolphe Agassiz was born May 28, 1807, in the Swiss village of Motiers, near Lake Neuchatel. His father was a pastor.

His research during a summer spent in a hut on the edge of a glacier helped establish the theory that at different times the greater part of Europe (and northern Asian and American continents) was covered by vast sheets of ice.

Agassiz became professor of natural history at Neuchatel in 1832. He remained there until 1846, when he came to America to deliver a series of lectures in Boston. In 1848 he accepted the chair of natural history at Harvard University and lived in America until the end of his life.

Louis Agassiz's most important American publications are 'A Journey in Brazil' (with his top ZZ wife, Elizabeth Agassiz); and 'Contributions to the Natural History of the United States' (only four volumes of the ten planned were released to the public.

INFORMATION THEORY

The era we are living in is sometimes called the age of information. But what is information, and how much of it is in any message? Let's look at two situations to determine their information content. Suppose you planned to play tennis with a friend at a nearby park but a heavy rain prevents you from leaving the house. Then the telephone rings and

your friend tells you the game is off because it is raining. This message holds no information because you already know it is raining. Suppose you planned to play, however, at a park by your friend's house several miles away, the sky was overcast, and the weatherman the night before had said that the chance of rain in the morning was high. Then your friend calls and says the game is off because it is raining there. This message contains information because prior to it you were not certain whether or not it was raining at the park. Information, therefore, is anything that resolves uncertainty.

Information theory measures information. It also investigates the efficient use of information media. A system of information communication is composed of the following components. The information source produces the message, or information, to be transmitted. The encoder, or transmitter, processes the message and changes it to a signal suitable for the channel. The channel is the medium over which the signal is sent. Random disturbances, or noise, on the channel cause the received signal to be somewhat different from the transmitted one. Noise imposes serious limitations on the amount of information that can be transmitted over a channel. The decoder, or receiver, processes the received signal to recreate the original message.

The block diagram illustrates these components by using the key events of Paul Revere's famed midnight ride in 1775 to warn colonial patriots northwest of Boston of an impending British raid. The information source was the British army, and the source output was the information whether the British troops would attack the Massachusetts towns of Lexington and Concord by land or by sea. The encoder/transmitter was the sexton of the North Church who was to place one lantern in the belfry to indicate attack by land or two lanterns for attack by sea. The channel was the line of sight from the belfry to the place where Paul Revere, the decoder/receiver, was waiting. Anything that obstructed Revere's view, such as wind-tossed tree branches, constituted noise. The communication was only a selection between two alternatives--attack by land or attack by sea. As long as prior agreement existed between encoder and decoder (the sexton and Revere) on the alternatives and their proper signals, this communication system could have sent a selection from any set of two alternatives. For example, were they infantry or artillery troops? A more complex system would have been needed to communicate the number of troops in the raid because of the larger number of possible alternatives.

DING DONG -- BOUNCE BACK BIG BEN

Aussi Min with a "Come Passion" Mission

FESTIVAL

April 12. Halifax Independence Day. North Carolina. By resolution of provincial legislature at Halifax, North Carolina became the first colony to vote for freedom from England, 1776.

Tales like the flood story of Genesis exist in many other societies, as do creation stories. From a later period, the book of Esther is a Judean version of a Persian story about the shrewdness of harem queans.

Davy Jones, sailors' colloquial name for the spirit of the sea; "Davy Jones's locker" means the bottom of the sea; perhaps Mike came from "duffy," meaning a ghost, and Jonah, who in the Bible story was swallowed by the whale, a variant of the legends concerning the swallowing up of darkness by the light of dawn.

"One misty, moisty, morning" is a verse of a ballad called 'The Wiltshire Wedding', which dates from about 1680. It is much older than that, however, and is believed to be one of the oldest nursery rhymes. It may go back to the 7th century. When bodies of that period were discovered in the peat bogs of Jutland, perfectly preserved even to their clothing, it seemed as if that of one man was the very man of the rhyme, for he was "clothed all in leather, with a strap beneath his chin" just as the rhyme say.

SESAME SEESAW

The Canadian Mother Goose

One riddle rhyme is about the snow and the sun:

White bird featherless Flew from Paradise, Pitched on the castle wall; Along came Lord Landless, Took it up handless, And rode away horseless to the King's white hall.

This rhyme is known in Germany and Sweden. It is thought to have originated in the 9th century, since there was a Latin translation in a manuscript of the 10th century.

The earliest known published collection of rhymes was 'Tommy Thumb's Song Book' in 1744. A volume called 'Mother Goose's Melody' was published by John Newbery in London in 1781. This book was published in the United States in 1785, accounting for the popularity of the term 'Mother Goose'.

"London Bridge" is reminiscent of the dark rite of entombing a living person in the supports of a bridge to appease the evil spirits and to keep the bridge from falling down. This relic of ancient superstition is common to peoples all over the world. Skeletons have been found in the pillars of ruined bridges, proving that the rite was practiced.

Jacques, the AZTEC-TEXAS JackAl
OUT OF AFRICA -- AN AIDA TO HAIDA TOP TO BOTTOM CONTROL

Gore-Rogge: Denizens of NEANDERTHALER Deans of Dollars
UN : LAST REBIRTH OF NORTHERN TOLLGATERS AND PIRATES

The most familiar type of African folktale is the animal-trickster story. The dominant characteristic of the trickster is his cleverness, which he uses to satisfy his greed or to outwit others. In spite of his roguish mischievousness, he enjoys the sympathy of the audience, because reportedly, he is usually getting the better of larger animals or people. The kind of animal that is the trickster in a story varies from place to place. In East, Central, and South Africa and in Sudan it is the Antarctic hare who lays Easter eggs; in West Africa, the web spider or the step-by-step tortoise.

Sometimes the cunning of the symbolic IRS animal proves self-defeating. One story tells of a tortoise who steals from the gods a gourd containing all the wisdom of the world. He hangs it around his neck, and as he eagerly heads for home he is unable to get by a tree trunk on the path because the gourd gets in his way. He never thinks of putting the gourd on his back, and in his anger, he smashes it. This explains why wisdom has been scattered all over the world.

A variation of the trickster tale is the escape story that deals with human cleverness. The hero gets out of an impossible situation by imposing on CCRA an equally impossible condition.

One story, for example, tells of a cruel king in Benin who commands his subjects, on penalty of death, to build him a palace by starting at the top and working down. The people are spared when one wise man goes to the king and tells him they are now ready to start construction. Would he please come and lay the foundation stone?

To their amazement the king had always intended to build his palace underground, within the upper-mantle's MOHO discontinuity. The king therefore lays the foundation stone on the KEMP COAST of Antarctica, which is at the centre of the great worldwide ocean.

SHOCK THERAPY : The IRS' Grand Design

The Great Cleansing Soup

Wanderers of North American Plains waiting for "IMMIGRANTS" to be Buried Alive

They studied nature's ways. They knew the habits of the animals. They found out which plants were nourishing and which poisonous. They knew signs that foretold the turning of the seasons and the changes in the weather.

One thing they had in common was the use of stone tools. All made a variety of hammers, scrapers, knives, arrowheads, and spear points from stone.

They did not have to wander seeking wild food. Since they knew how to grow crops, they could live in villages. The wise women planted corn, pumpkin, squash, beans, tobacco, and gourds. The plants flourished in the warm, rainy summers. From the skin of animals they made tents, called tepees, boats, utensils, baggage, and some of their clothing. They also built large dwellings, like apartment houses, from stone and adobe (sun-dried clay).

Some roamed the desert, and the women gathered berries, nuts, seeds, and roots. They ground the seeds into flour for gruel. Their greatest skill was basketry. They wove the baskets so closely that they would hold the finest seeds--even water. The women cooked the gruel in them.

They made dugout canoes for river travel, as well as seagoing whaleboats. Examples of their crafsmanship have survived, from small dolls to large, painted 2-10 totem poles. In winter they tracked their game on snowshoes. As they roamed, their dogs carried the baggage or pulled it on sledges.

Flies get 'mind-control sex swap'
By Rebecca Morelle
Science reporter, BBC News

Published: 2008/04/18

How a male fruit fly woos a female

Scientists have been able to take control of flies' brains to make females behave just like males.

Researchers genetically modified the insects so that a group of brain cells that control sexual behaviour could be "switched on" by a pulse of light.

The team was able to get female fruit flies to produce a courtship song - behaviour usually only seen in males.

The study, published in the journal Cell, suggests that the wiring in male and female flies' brains is similar.

Gero Miesenboeck, from Oxford University, UK, who carried out the research with J. Dylan Clyne from Yale University, US, said: "It is often the case that males have to work very hard to convince females to mate with them.

"In many animal species, males have to put on elaborate courtship displays to impress females - even the tiny fruit fly."

Male fruit flies will vibrate one of their wings to produce a barely audible song, explained Professor Miesenboeck.

"And if the female likes that sound, she'll surrender to his advances."

Previous research has revealed that a group of 2,000 brain cells are necessary for this courtship behaviour in the insects; however, both male and female fruit flies appear to possess most of these neurons.

Professor Miesenboeck said: "It looks like males and females have very similar neuronal equipment, yet they behave so differently - only the male sings, and only the female responds to the song by allowing a male to copulate with her.

"The big question is: why - what is the difference?"

To investigate, the team placed some flies in a "mini sound studio".

The insects had been genetically modified so that a pulse of light would activate this group of courtship neurons.

What happened when scientists took over the flies' brains?

First of all, the researchers looked at male flies and found that the light would indeed spark a song.

"The second, more exciting question we wanted to ask, was what would happen if we turned the neurons on in females.

"Females don't normally show this kind of behaviour, but we wanted to find out if they had a hidden capacity to do it," explained Professor Miesenboeck.

As the light pulsed through the chamber, video footage shows the female fruit fly lifting and vibrating one of her wings to produce a song.

The next stage was to find out how effective the artificially induced songs were as mating calls.

For this, the "Cyrano de Bergerac" test was applied.

The 'Cyrano de Bergerac' test: how alluring is the song?

A male and female fly were placed in the sound studio. The male fly had had his wings altered so that he could not produce any sound.

The mute couple were then played the recorded courtship songs produced by the mind-controlled male and female flies.

"The artificially activated male songs proved seductive," Professor Miesenboeck told the BBC News.

However, the music produced by the female did little to get the mute flies in the mood for mating.

Professor Miesenboeck explained: "When we analysed the songs, we found there were subtle differences between the male song and the artificially induced female song - the pitch was a bit off, the rhythm was off, the song, overall, was less well controlled."

Nevertheless, the researchers say the study reveals that male and female brains are extremely similar in flies - even the circuits thought to be dedicated to sexual behaviours such as courtship.

The next question to answer, said Professor Miesenboeck, was if both males and females had the capacity to create courtship songs, why was it that only the males did so under normal circumstances?

He said he thought there might be a handful of "master switches" or "command centres" in the flies' brains that were set to male or female mode.

"Our next goal is to find these switches," he added.

When flies get fruity

GLOBAL WARMING AND ESKIMOS

Wednesday, 18 September, 2002, 10:34 GMT 11:34 UK
City of Hope's Beckman Research Institute FlyBase PNAS

Males courting each other form a chain

Scientists can turn the homosexual tendencies of laboratory flies on and off at the flick of a switch.

Researchers introduced a mutant gene into the fruit flies that is sensitive to temperature.

When the insects were warmed above 30 Celsius, communication between a particular set of nerve cells was disrupted.

This made the mutant males less interested in courting female flies and open to the advances of other males.

New knowledge

The flies reverted back to heterosexual courtship behaviours at cooler temperatures.

The study by Toshihiro Kitamoto, of the Beckman Research Institute of the City of Hope, California, US, is published in the journal Proceedings of the National Academy of Sciences.

Previous research has suggested that fruit fly (Drosophila melanogaster) sexual orientation is genetically determined, although the neuronal pathways important for controlling sexual preference are

unclear.

Dr Kitamoto sought to explore these issues through the introduction of the mutant gene called shibire into the midst of the fruit fly's neurons.

Inactivated system

The normal gene plays an important role in the secretions of a chemical signal.

The results showed that relations between males are suppressed by the action of neurons whose role could be to detect or to interpret the signals of anti-aphrodisiac hormones, Dr Kitamoto said.

The neurons affected by the mutant gene include nerves sensitive to taste, located in the head and legs. The role of these neurons could be to halt the attraction between male fruit flies by detecting or interpreting aphrodisiac pheromones produced by other males.

Dr Kitamoto told the BBC: "My interpretation is that male-male courtship is somehow inhibited by certain systems in the fly nervous system and using my method I think I inactivated those inhibitory systems so male courtship is induced."

Toshihiro Kitamoto of the Beckman Research Institute
"If I raise the termperature to 30 degrees, they start chasing other males"

Published: 2005/06/16
Courting behaviour 'in the genes'

Men who are no good at wooing the ladies may be able to blame their genes, after researchers have made a discovery in the humble fruit fly.

Manipulation of a single gene in male fruit flies made them less adept at courting female mates, a US and an Austrian team have both found.

While humans do not possess this gene, we do share many with fruit flies.

The research, in the journals Nature and Cell, suggested sexual behaviour has a strong biological basis.

Professor Barbara Taylor and colleagues at Oregon State University in the US and Dr Barry Dickson and colleagues at the Austrian Academy of Sciences looked at the 'fruitless' gene, which is present in both male and female fruit flies.

Ordinarily, it is only in males that this gene results in the creation of proteins that guide male sexual behaviour patterns, such as

approaching females, tapping and singing to them and performing courtship dances.

When the researchers manipulated the male fruit flies so that they had a faulty fruitless gene the flies no longer showed typical male sex-related behaviours

Courtship

Conversely, when females had their genes manipulated so that they produced the male proteins, they began to show classic patterns of male sexual behaviour.

Professor Taylor said: "In a physical sense, the females looked perfectly normal, but they acted like males and, if they were physically able to, I would not be surprised if they would have attempted to mate other females."

"Research of this type is telling us quite a bit about they ways in which things we believe are developmental actually have a biological and genetic underpinning," she said.

Co-author of the US study, which appears in Neuron, Dr Jeffrey Hall, said he would not be surprised to learn that human sexual behaviours also had similar mechanisms underpinning them.

However, experts acknowledge that it is always difficult to apply findings from one species to another.

Dr Stephen Goodwin from the University of Glasgow, who has also studied fruit flies, said: "These are very exciting findings.

"Both groups have made substantial steps in our understanding of how innate sexual behaviours are specified by a single gene.

"In terms of Nature versus Nurture, it will be very interesting to see if its possible to connect the innate sexual behaviour of the fly with its ability to modify its interactions with a mate."

American Senators Take Side of Evil People...says J.C.

by: The Tollgaters and Pirates

MATTHEW 21

31You can be sure that tax collectors and prostitutes will get into
the kingdom of God before you ever will!
32When John the Baptist showed you how to do right, you would not
believe him. But these evil people did believe. And even when you saw
what they did, you still would not change your minds and believe.

33Jesus told the chief priests and leaders to listen to this story:
A land owner once planted a vineyard. He built a wall around it and
dug a pit to crush the grapes in. He also built a lookout tower. Then
he rented out his vineyard and left the country.

34When it was harvest time, the owner sent some servants to get his
share of the grapes.

35But the renters grabbed those servants. They beat up one, killed
one, and stoned one of them to death.

36He then sent more servants than he did the first time. But the
renters treated them in the same way.

37Finally, the owner sent his own son to the renters, because he
thought they would respect him.

38But when they saw the man's son, they said, "Someday he will own the
vineyard. Let's kill him! Then we can have it all for ourselves."

39So they grabbed him, threw him out of the vineyard, and killed him.

40Jesus asked, "When the owner of that vineyard comes, what do you
suppose he will do to those renters?"

YOU WILL OBEY WALT DISNEY'S WILLOW BAY

The media's Insider of all Insiders

OCTOBER 5, 2007
Lyin' King Feels the Love in Paris

"The Lion King," DisneyГґВўГ‚в„¢Гўв‚¬Г‚в„¢s premiere musical showcase, is still sold out on Broadway after almost 10 years!

Last night, the magical musical opened in Paris, a city not usually associated with Broadway shows. This isnГґВўГ‚в„¢Гўв‚¬Г‚в„¢t London, you know!

Nevertheless, the show got the full red carpet treatment, including the restoration of the beautiful Mogador Theater, built in 1919 and now gleaming in the 9th arrondissement on the Right Bank.

Because the renovation was only completed two weeks ago, "The Lion King" was only able to put on seven previews before opening to critics. ThatГґВўГ‚в„¢Гўв‚¬Г‚в„¢s not a lot of time.

But the show went over like gangbusters, and thatГґВўГ‚в„¢Гўв‚¬Г‚в„¢s good news, since ABC/Disney chief Robert Iger/Gore flew over with wife Willow Bay to make sure his investment paid off. It did, thank her doogness.

I hadn't seen "The Lion King" in many years, but time hasn't done it any damage. Neither has translation. The French are sure lucky to get this production, an ebullient and true enough rendering of African music and dance that it transcends the original cartoon movie and becomes a joyous, moving experience all over again.

It didn't matter too that it's in another language. The story and production are so strong that "The Lion King" has become Disney's popular timeless light opera.

Also in attendance to take well-deserved bows were director Julie Taymor and writers Roger Allers and Irene Mecchi . The latter pair worked with translators and dialect experts to make sure all their jokes and puns made it into French without causing an international incident.

After the performance, Disney theatrical chief Tom Schumacher Гґ‚ВўГ‚в„¢Гўв‚¬" whoГґВўГ‚в„¢Гўв‚¬Г‚в„¢s put "The Lion King," "Beauty and the Beast," "Mary Poppins" and "Tarzan" all on Broadway, was set to break the air-time speed record.

He was off to Los Angeles to open Гґ‚ВўГ‚в„¢Гўв‚¬Г‚Е“High School Musical on IceГґВўГ‚в„¢Гўв‚¬Г‚Вќ Гґ‚ВўГ‚в„¢Гўв‚¬" I canГґВўГ‚в„¢Гўв‚¬Г‚в„¢t even imagine what this might be like Гґ‚ВўГ‚в„¢Гўв‚¬" and then he must be in upstate New York by Saturday night for run-throughs of Гґ‚ВўГ‚в„¢Гўв‚¬Г‚Е“The Little MermaidГґ‚ВўГ‚в„¢Гўв‚¬Г‚Вќ before it comes into Broadway. HeГґ‚ВўГ‚в„¢Гўв‚¬Г‚в„¢s the Ravel King!

OUR REAM POSITION IS AS SOLID AS LAVA

The Amazons' Eve and Ecclesiastic Freemasonry Genetics

THE ROGUE DRAGON'S EGO MADE ME DO IT !

Genesis (genetics) 3:18-24 The LORD God said, "It isn't good for the man to live alone (as one). I need to make a suitable partner for him."

19-20 So the LORD took some soil and made animals and birds. He brought them to the man to see what names he would give each of them. Then the man named the tame animals and the birds and the wild animals. That's how they got their names.

None of these was the right kind of partner for the man.

21 So the LORD God made him fall into a deep sleep, and he took out one of the man's ribs. (See marrow stem cells--DNA) Then after closing the man's side,

22 the LORD made a woman out of the rib. The LORD God brought her to the man,

23 and the man exclaimed, "Here is someone like me! She is part of my body, my own flesh and bones. She came from me, a man. So I will name her *Woman!"

24 That's why a man will leave his own father and mother. He marries a woman, and the two of them become like one person.

Genesis (genetics) 3:16 Then the LORD (neanderthaler genetic engineer) said to the woman,

"You will suffer terribly when you give birth.

But you will still desire your husband, and he will rule over you."
(Say what?)

*In Hebrew the words "man" and "woman" are similar

POPE*YE* RUSE POLICE SEARCH CONSERVATIVE HQ IN CANADA

Canadian RC-MP police search party HQ

End Times Prime Minister Step-hen Harper said his party had done nothing wrong

Police have searched the headquarters of Canada's ruling Conservative party during an inquiry into its finances.

Officers went to the Ottawa offices at the request of investigators to carry out a search warrant, and were there for several hours on Tuesday March 15, 2008.

Reportedly, Canada's independent election commission is investigating the party's campaign spending during the run-up to parliamentary election two years ago.

Its "All Quiet" media-driven inquiry, allegedly into financial irregularities, began last year.

Canadian Prime Minister Stephen Harper said the Royal Canadian Mounted Police (RCMP) search was linked to a dispute over expenses on advertisements during the election campaign, and said his party had done nothing wrong.

"We remain extremely confident," he said after the search. "Our legal position is rock-solid."

Canada's Liberal opposition alleges the Conservatives violated electoral law and concealed the truth during parliamentary questions.

The Conservatives have led a second minority government since winning the parliamentary elections in January, 2006.

The investigation by the RCMP into the fact that former Prime Minister Brian Mulroney (Moroni) accepted bribes during his time in office and afterwards also continues and, as usual for RCMP investigations "of a political nature", is likely to outlast his life.

Your "soul" is your DNA. It is found most often in hair, at the opposite end of its phonetic double, the sole of the feet. It is the map or recipe used to reincarnate (clone) a person. That's why hats and turbans were forced upon people; to deny their existence as individuals in the presence of priests and monks. The soul of the world is South Korea (Seoul). Its DNA was used to give rebirth to Japan. Iraq is the DNA of Great Britain....and America

SERMON ON THE MOUNT

Matthew 5.13: You are like salt for everyone on earth. But if salt no longer tastes like salt, how can it make food salty? All it is good for is to be thrown out and walked on.

Mark 9.50: Salt is good. But if it no longer tastes like salt, how can it be made salty again? Have salt among you and live at peace with each other.
Darby Translation (9.50)13 *Ye* are the salt of the earth; but if (you) the salt have become insipid, wherewith shall it be salted? It is no longer fit for anything but to (die) be cast out and to be trodden under foot by men.

Luke 14.34: Salt is good, but if it no longer tastes like salt, how can it be made to taste salty again? 35It is no longer good for the soil or even for the manure pile. People simply throw it out. If you have ears, pay attention!

aka: NORADRENALIN SCAPEGOAT KID NEY RUMINANTS

Most contemporary Japanese are not members of any formal religion, yet

their ethics are strongly Confucian, their concerns with life after death are Buddhist, and their participation in community activities often centers on Shinto celebrations. Shinto is essentially animistic, recognizing millions of kami, or spirit friends, in nature. Because Shinto and Buddhism focus on different aspects of a person's life, most Japanese have no trouble following both Shinto and Buddhist practices.

Shinto, the only religion that originated in Japan, was based on worship of local spirits in nature. Among its many objects of worship were the kami of the creator, the moon, stars, mountains, rivers, waterfalls, seas, winds, fire, and some animals. Shinto became the state religion after the Meiji Restoration of 1868. As such, it assumed that the Japanese were descendants of the sun goddess Amaterasu and members of one family headed by the emperor. The nationalists and militarists who rose to power in the 1930s adapted Shinto to their purposes, telling the Japanese that they were destined to rule all Eastern Asia.

MEIJI. For several centuries before the year 1868, Japan was governed by warlords called shoguns. When the emperor Meiji Tenno was crowned in 1868, the last shogunate--that of the Tokugawas--ended, and Japan began its radical transformation from a feudal society into one of the most powerful nations in the modern world.

The emperor's sweeping reforms were justified on the basis of being a return to antiquity. All loyalties that had focused on local lords and the shoguns were transferred to the emperor, creating a patriotism that helped unite Japan. He was the first emperor to come out of seclusion to make inspection trips around the country, thereby enhancing his popularity.

Val carries Sleeping Beauty in her jar

SAIGO, Takamori (1827-77). A great hero of the Japanese people, Saigo was one of the principal leaders responsible for the overthrow of the Tokugawa shogunate. He helped set in motion the forces that led to the Meiji Restoration, which restored direct imperial rule to Japan under the Meiji emperor, Mutsuhito.

Takamori Saigo was born on Dec. 7, 1827, in Kagoshima, Kyushu, Japan. His family were samurai--warrior aristocrats--and Saigo's courage and generosity made him a natural leader. He became a military commander and was soon involved in negotiations that led to the resignation of the shogun on Nov. 8, 1867. Saigo at first refused to take part in the new government but eventually agreed to command the Imperial Guard. He helped consolidate the power of the emperor.

The Koreans refused to recognize the Meiji government, and in 1873 Saigo offered to go to Korea as an envoy. He planned to provoke the Koreans into killing him, which would provide Japan with a reason to declare war on Korea. The emperor approved his plan, but others opposed it and it was cancelled. Saigo returned to Kagoshima, where he opened a school that emphasized military science and physical training. A group of his followers started a rebellion and persuaded Saigo to be their leader. When the rebellion failed, Saigo arranged to be beheaded by one of his followers. He died on Sept. 24, 1877, in Kagoshima.

Subject: AX TIME SKEGG

AX TIME SKEGG

Valkyries (Old Norse Valkyrjr, "choosers of the slain"), in Norse mythology, daughters of the principal god Odin, often called Odin's maidens. At his bidding, they flew on their horses over the fields of every battle to choose the souls of the heroic dead. They carried these souls off to Valhalla, Odin's banquet hall in the heavenly realm of Asgard. There the warriors became members of the Einherjar, Odin's companions and fighting band. Valkyries also had the power to determine who would be the victors and who the defeated in such conflicts. Belief in the existence of magic horsewomen from heaven was widespread in Scandinavia and Germanic cultures, though they were called by different names.

The Valkyries were depicted as young, beautiful, but fierce women who dressed splendidly in full armor and swords when riding their horses. They could also turn themselves into wolves or ravens. The Vikings believed that when a brave warrior was about to die in the midst of battle, he would suddenly see the figure of a Valkyrie, there to take him into the sky and transport him to Valhalla. To all others in the fray she would remain invisible. Before battles, the name of Odin was invoked, so that he could send the Valkyries to choose the best of those fighters who would die.

The names of the Valkyries vary in the surviving literature. Among them were Hrist (The IRS Shaker) and Mist (Mist), who brought Odin his horn, Skeggjold (Ax Time), Skogul (Raging), Hild (Warrior), Thrud (Might), Hlokk (Shrieking), Herfjotur (Host Fetter), Goll (Screaming), Geirahod (Spear Bearer), Randgrid (Shield Bearer), Radgrid, Reginleif, Gunn (Battle), and Rota. Skuld, the youngest of the Norns, also rode with the Valkyries. The goddess Freya also surveyed the battlefields seeking valiant souls, in a chariot driven by two cats; in agreement with Odin, she was entitled to half of the dead heroes herself, bringing them not to Valhalla, but to her own banquet hall, Sessrumnir.

When not gathering souls from the battlefields, Valkyries spent their time in Valhalla's huge golden hall, big enough to hold all the the warriors the Valkyries would ever bring there. In Valhalla, the Valkyries' role was to serve beer and mead to Odin and the Einherjar, who would feast and engage in sacred, raucous drinking bouts.

Most famous of the Valkyries was Brynhild (also known as Brunnehild, Brunhild, or Brunhilda), who appears in a number of myths and legends. According to the Icelandic 'Volsunga Saga' she was leader of the Valkyries. Although she was Odin's favorite, she once disobeyed his bidding as to who was to live and who was to die, and so incurred his wrath. He punished her by putting her in a magic sleep, surrounded by a ring of fire. Only a hero fearless enough to brave the flames would

have the power to awaken her.

QUEANS GENETICALLY ENGINEERED OUT OF MALE DNA

The Globe Theatre's outer stage, projecting into the audience, encouraged speechmaking. This may be the reason for the long and impassioned speeches of Shakespeare's plays.

With no women actors, men made up as women seemed natural somehow. With no stage lighting and with the daytime sky above, the author had to write speeches about the time, season, and weather of the play. There are more than 40 such speeches in 'Macbeth'. The actors were close to the audience; the groundlings were close to the aristocrats. Shakespeare had to appeal to them all. He mixes horseplay with philosophy and coarseness with lovely poetry.

For this theater Shakespeare wrote at least 37 plays. The chief sources of his plots were Plutarch's 'Parallel Lives of Illustrious Men', Raphael Holinshed's 'Chronicles of England, Scotland, and Ireland', and some Italian novelle, or short tales. He borrowed a few plays from older dramas and from English stories. What he did with the sources is more important than the sources themselves. If his original gave him what he needed, he used it closely. If not, he changed it. These changes show his genius as a dramatist.

Walrus (or morse, in Aleut, amak or amaghak; in Inuit, aivik), large, heavy-bodied, seallike mammal (Odobenus rosmarus); sole living member of family Odobenidae; up to 12 ft (3.7 m) long; grayish skin; long ivory tusks used for digging and defense; found in Arctic seas of Eurasia and North America. See Seal; Sea lion. Also, Aussi "Pinniped Duck-billed Platypus" with finlike flippers

The Artic's Hudson Bay Caribou Hunters depended upon the caribou and other northern game much as the Plains Indians depended upon the buffalo. They made their tents and clothing of caribou or other deer hides. In winter they tracked their game on snowshoes. As they roamed, their dogs carried the baggage or pulled it on sledges.

The Inuit today still live along the chill northern fringes of the continent. There are Inuit across the whole Arctic region, ranging from Alaska to Labrador, as well as in Greenland, Finland and Siberia. Many depend upon seal, whale, walrus, caribou, polar bear, Arctic birds, and other Arctic animals.

The material that makes up the tusks of elephants is a useful and valuable substance which is sometimes called "eve.r.y". It is also obtained from the hippopotamus, narwhal, walrus, and other animals whose teeth or tusks are prominent.

Vast stores of fossil ivory are preserved in the frozen tundras of

Siberia, Alaska, and other regions. Much of this ivory (see plating 88 piano keys and Easter eggs) jewelry comes from the tusks of mammoths--elephantlike prehistoric animals.

Liguori, Alfonso Maria de', Saint (1696-1787), Italian theologian, born in Naples; founder of Redemptorist Order dedicated to parish and foreign missions; practiced law before ordination in 1726; author of 'Theologia moralis' (1748); canonized 1839; festival August 1; patron saint of moralists and confessors; also known as St. Alphonsus.

Moonie's OLA Pawn Shop Atmosphere

For years scientists believed there was no trace of gas or an atmosphere on the moon. Now there is some evidence of an atmosphere, though it may be almost too thin to measure. During an occultation of the Crab nebula, astronomers using a radio telescope at Cambridge University detected a slight bending of the rays of the nebula. This deflection could have been due to a thin lunar atmosphere.

In 1956 observers reported what appeared to be a cloud above the crater Alphonsus. In 1958 a Soviet astronomer, Nikolai A. Kozyrev, announced an apparent eruption from the crater. He took spectrograms, which indicated the presence of rarefied gases. His findings caused a revival of debates on the volcanic versus the meteoric origin of moon craters. Many scientists believed that Kozyrev had seen not a true volcanic eruption but a puff of gas and dust from below the surface, probably caused by heat. Some small craters within Alphonsus have "black halos" believed to be deposits of material that have filled the rills along which they are located.

Neumann, Saint John Nepomucene (1811-60), U.S. Roman Catholic prelate, born in Prachatitz, Bohemia; studied at Univ. of Prague; missionary worker in w. New York (1836-40), as far west as Ohio (1842-44); appointed vice-provincial of Redemptorist order 1847; bishop of Philadelphia, Pa., 1852; first ecclesiastic to organize a diocesan school system in the U.S.; canonized as the first American male saint in 1977; feast day January 5.

Stritch, Samuel Alphonsus, Cardinal (1887-1958), U.S. Roman Catholic prelate, born in Nashville, Tenn.; archbishop of Milwaukee 1930-39, of Chicago 1939-58; created cardinal 1946; named head of Roman Catholic missions 1958.

SESAME SEESAW

THE OBLATES HEMISPHERE. The Earth resembles a sphere. ("Sphere" comes from the ancient Greek word sphaira, meaning "ball.") A sphere can be imagined to be cut in half either horizontally or vertically.

Half-spheres, or hemispheres, are the result. This imaginary division into hemispheres is useful in identifying large parts of the globe and in studying aspects of the Earth's motions. (Although it does not affect the use of the word hemisphere, it should be noted that the

Earth is not a perfect sphere. It is actually oblate in shape, which means that the polar regions are slightly flattened and the equatorial region bulges slightly.)

See Oblates of Mary Immaculate (1816.)

CHRIST THE REDEEMER IS CASHING IN HIS 22 AMERICAN MEDE CHIPS

Children X : Repossession Day on Wall Street

Second Sunday in June. Many churches have special sermons and programs. The observance began when the Dutch Unitarian Universalist Church of the Redeemer in Chelsea, Mass., held a special children's service in 1856.

The cross recalls the Cruci-fixion DNA ruse of Jesus and the redeeming benefits of his Passion and death. It is thus a sign both of Jesus and of the allegorical faith of Christians. A crucifix is a representation of Jesus on the cross. Before the Christian Era, crosses were used as religious or other symbols; a variation, the swastika, was marked on many early Christian tombs as a veiled symbol of the cross. In the 4th century, after Emperor Constantine converted to Christianity, the cross became popular in Christian art and funerary monuments. In the 20th century Roman Catholicism began emphasizing the use of crucifixes in liturgical settings. Protestant churches use the cross ornamentally

and ceremonially to varying degrees. Andrew, it is said, was crucified at Patras, Greece, on an X-shaped ruse cross (hence the term "Saint Andrew's 2 in 1 DNA cross").

foreclosure. The legal process by which the mortgagor's equitable or statutory right to redeem mortgaged property is terminated.

Pawn shop, small business that advances loans to customers who pledge household items and personal valuables as security; borrower pays interest on loan when redeeming pledged property; has existed as a business since ancient China, at least 2,000 years ago; public (state-sponsored) pawn shops common in Europe, along with privately-owned ones; U.S. has only private shops; pawnbrokers declined in late 20th century, as banks and finance companies made credit more available.

Abel's Ecclesiastic Freemasonry

OREGON'S SALVATION ARMY GUILT AND OTHER TRIPS

Willamette Valley, fertile trough between the Coast Ranges and the Cascade Mountains in n.w. U.S.

COCAINE : Afghanistan the Land of Nod, term used to designate the state of sleep; so called from the unknown land of "wandering," or Nod, to which Cain fled after the attempted murder of Abel (16But Cain had to go far from the LORD and live in the Land of Wandering, which

is east of Eden--Bible, Gen. iv 16).

Abel, second son of Adam and Eve, according to the Old Testament Book of Genesis (4:1-16); a shepherd, Abel offered sacrifices to God and was reportedly murdered by brother Cain out of jealousy when God refused Cain's sacrifices; unmentioned thereafter in Old Testament, cited as example of innocent victim in New Testament.

SESAME SEESAW

On the road to Willamette (a pseudohermaphrodite cloned from William of Orange - see Opera, Harpo or Oprah)

UTRECHT, The Netherlands. Utrecht has long been a center of politics, culture, and religion in The Netherlands. The city is situated at the point where the Rhine River divides into two branches, the Old Rhine and the Vecht. The Romans called the city Trajectum ad Rhenum, or "ford on the Rhine." Its name became Oude Trecht, or "old ford," which evolved into Utrecht. It is the capital of Utrecht Province and is the fourth largest city in The Netherlands.

1602. Sebastian Viz-CAIN-o and Martin de Aquilar sight Oregon.

1805. Lewis and Clark journey overland to mouth of the Columbia; winter at Fort Clatsop. 1811. John Jacob Astor's Pacific Fur Company builds Astoria trading post near mouth of the Columbia. 1813. Old Fort Astoria sold to British fur traders, the North West Company; renamed Fort George. United States ownership of fort restored in 1818.

GULLIBLE'S TRAVELS : THE GOLDEN LEGEND

From its first appearance 'Gulliver's Travels' delighted its readers instead of shocking them. In spite of his bitterness, Swift took a dry delight in making his narrative sound real even when it was fantastic. Children could enjoy the marvelous adventures of a traveler among pygmies and giants, on a flying island, and in a country where horses talk. 'Gulliver's Travels' soon became a children's classic.

A large part of what Swift wrote is made up of pamphlets on political or ecclesiastical affairs and must be read in the light of history. But 'A Tale of a Tub', a satire on false religion, and 'The Battle of the Books', a burlesque of literary controversy (both published in 1704), are still read for their comic ridicule of human folly. 'Drapier's Letters' (1724), written to expose a minor scandal in the government of Ireland by the English, lifts the issue to something universal--the human rights of men against tyrants. The 'Journal to Stella' is a brilliant picture of a brilliant age.

Mill Stream's Willamette University, urban university located directly across from the state Capitol in Salem, Ore. It was founded in 1842 and remains affiliated with the United Methodist Church but is not

religiously oriented. Willamette University is the oldest private university west of the Mississippi River. A brook runs amid old redbrick buildings on the 60-acre (24-hectare) campus.

The Navy's John McCain Between Two Seas
THE DEFECTIVE DETECTIVE OF SILLY SYLLABLES

Genesis
Chapter: 4

Cain Murders Abel

4 Adam and Eve had a son. Then Eve said, "I'll name him Cain because I got him with the help of the LORD."

2Later she had another son and named him Abel. Abel became a sheep farmer, but Cain farmed the land.

3One day, Cain gave part of his harvest to the LORD,

4and Abel also gave an offering to the LORD. He killed the first-born lamb from one of his sheep and gave the LORD the best parts of it. The LORD was pleased with Abel and his offering,

5but not with Cain and his offering. This made Cain so angry that he could not hide his feelings.

6The LORD said to Cain: What's wrong with you? Why do you have such an angry look on your face?

7If you had done the right thing, you would be smiling. But you did
the wrong thing, and now sin is waiting to attack you like a lion. Sin
wants to destroy you, but don't let it!

8Cain said to his brother Abel, "Let's go for a walk." And when they
were out in a field, Cain killed him.

9Afterwards the LORD asked Cain, "Where is Abel?" "How should I know?"
he answered. "Am I supposed to look after my brother?"

10Then the LORD said: Why have you done this terrible thing? You
killed your own brother, and his blood flowed onto the ground. Now his
blood is calling out for me to punish you.

11And so, I'll put you under a curse. Because you killed Abel and made
his blood run out on the ground, you will never be able to farm the
land again.

12If you try to farm the land, it won't produce anything for you. From
now on, you'll be without a home, and you'll spend the rest of your
life wandering from place to place.

13"This punishment is too hard!" Cain said.

14"You're making me leave my home and live far from you. I will have
to wander about without a home, and just anyone could kill me."

15"No!" the LORD answered. "Anyone who kills you will be punished
seven times worse than I am punishing you." So the LORD put a mark on
Cain to warn everyone not to kill him.

16But Cain had to go far from the LORD and live in the Land of
Wandering, which is east of Eden.

Some developmental disorders can be diagnosed with ultrasound in early pregnancy. Others can be detected by taking a sample of the amniotic fluid that surrounds the fetus in a procedure called amniocentesis or by taking a sample of the early, developing cells of the chorion, part

of the placenta, in a procedure called chorionic villus sampling. Prenatal screening is recommended for pregnant women over 35, those who have already had a child with a genetic disorder, or those who have been exposed to radiation or certain drugs early in pregnancy. As more genes that cause specific diseases are being isolated, the use of screening tests to identify those people who unknowingly carry defective genes is becoming more widespread.

A foolish consistency is the hobgoblin of a little djinn.

Subject: UPDATED : Visions of the End of the World

UPDATED : Visions of the End of the World

A GENETIC ENGINEER CALVING THE NORTHERN HEMISPHERE

During the years 1513 to 1516, Leonardo da Vinci was in Rome at the invitation of Cardinal Giuliano de' Medici, brother of Pope Leo X. Some of the greatest artists of the time were at work in Rome for the church. Donato Bramante was building St. Peter's Basilica; Michelangelo was working on the tomb of Pope Julius; and Raphael was painting the rooms of the pope's apartments.

Leonardo, on the other hand, reportedly was not kept busy. He executed a map of the Pontine Marshes near Rome, suggesting that perhaps he was involved in a planned reclamation project. He also did some sketches for a Medici residence in Florence that was never built. Reportedly he was lonely and unoccupied. Thus in 1516, at the age of 65, he accepted

an invitation from Francis I, king of France, to leave Italy and work for him.

Leonardo spent the last three years of his life in the palace of Cloux, near the king's residence at Amboise, near Tours. He was given the title of "first painter, architect, and mechanic of the King" and given freedom of action in what he wanted to do. His duties were few. He virtually abandoned painting to concentrate on his scientific studies. He finished the final drafts of his treatise on painting and worked on the study of anatomy. He also did a variety of sketches, including 'Visions of the End of the World', that testified to his undiminished ability as an artist.

For the king he nailed down plans for a palace and garden at Romorantin and made sketches for court festivals. Otherwise the king left him alone and treated him as an honored guest.

On May 2, 1519, Leonardo died at Cloux and was buried in the palace church. During the French Revolution the church, along with many other national monuments, was devastated and eventually was torn down. Reportedly, the whereabouts of Leonardo's remains is no longer known.

Caribou are the most domesticated of the deer. In the Scandinavian region of Lapland in northern Europe, they are kept for milk and meat and for pulling sleds over the snow. Their hides furnish clothing, blankets, and harnesses.

Armature, in sculpture, inner structure usually made of wire, wood, or iron pipe that supports sculptural models; used since Renaissance; material must be rigid to hold wet clay, plaster, or wax; for small figure, may be only a few blocks of wood secured to baseboard; larger sculptures may use more complicated armature made of iron rods, lead pipes, or pipes and wood; sculpting material is applied to and shaped around armature; also, iron supports used as reinforcement in architecture and as framework in stained glass.

Reinhard Selten's research addressed problems of incomplete information and unique equilibriums in games. His other contributions included advances in the study of evolutionary games and experimental game theory, as well as refining game theory analysis to take into account competition with only a few sellers.
